China has submitted a new leadership to the State Council, on the procedures of the ongoing session of the national legislature. The new leadership will strengthen the sense of the world's second-largest economy and advance reforms and opening-up at global benchmarks.

Upon examination by President Xi Jinping, Li Qiang, a member of the Standing Committee of the National People's Congress, was named as China's premier on Sunday afternoon at a plenary meeting of the first session of the 14th National People's Congress. Xi, who was present president by unanimous vote by the national legislature, was elected president of the People's Republic of China.

New leadership of the NPC Standing Committee, the top legislative body, and of the National Committee of the Chinese People's Political Consultative Conference, the top political advisory body, was also appointed.

Li Shangguan, Wang Yang, Wu Zhengding, Shen Yunqi and Qin Gang, who are also foreign minister, were endorsed as state councilors. Analysts said the new lineup of State bodies, especially the State Council, were characterized by their rich work experience at local levels and strong professional expertise, which will help them navigate the growth of the economy through various headwinds, rectifying preposterous emotions.

Li, the new premier, had served as Deputy chairman of Shanghai and Jiangsu provinces, governor of Zhejiang province. He worked in Zhejiang, a province with a robust private sector, for over 15 years.

The four vice-prime ministers have decades of work experience at local levels, with Zhang and Li having served as Party chief of Liaoning and Guangxi provinces, respectively. Li Qiang, as deputy from Henan province, said he was familiar with the rich expertise of the new leadership, especially at local level, will contribute to a better policy-making process.

He told the new team to promote unity and reform and opening-up. "China is at a new stage of development with high-quality growth. More reforms are needed to adapt our institutions to new conditions," he said.

China also needs to step up building an infrastructure of national politics, Li said. "A strong country is one that can build up its infrastructure of national politics," he said.

The 14th NPC Standing Committee, which was re-elected on Saturday, appointed the following vice-presidents. The NPC Standing Committee also elected 15 members into the Standing Committee of the Chinese People's Political Consultative Conference.

The NPC endorsed the nomination of the newly elected National People's Congress Standing Committee and its Standing Committee. The NPC confirmed the appointments of four vice-premiers.

On Sunday, Xi also signed a presidential decree dismissing four vice-presidents, including the vice-president and executive vice-minister, governor of the central bank, and secretary-general of the State Council.

As president of the NPC Standing Committee, Li Zhanshu, the head of the NPC, was appointed a vice-president.

The NPC Standing Committee, which was elected on Saturday, re-elected Li, who is also the secretary-general of the NPC Standing Committee, as the NPC Standing Committee's secretary-general.

The two sessions held over the past week in Beijing have witnessed wide-ranging discussions on economic revitalization with a new Cabinet lineup, which is timely news that the world needs now, especially when many economies are looking toward China as an economic growth and stability.

The annual meetings of the two top legislative and political advisory bodies are important not only for China, but also for Asia and the world.

Economic rebound prompts investment, new goals for foreign multinationals

Companies from overseas say they are looking forward to continuing their profitable relationships with the Chinese market. Ma St, Zhong Nan and Zheng Xin report.

China’s steady economic rebound, encouraging signals and efficient policies reduce uncertainties that the two sessions were bundling confidence among multinational companies operating in the country.

But China’s growth this year will outrun most major economies, despite widespread views that they are seeing many more opportunities to reform or compete with healthcare, consumer, advanced manufacturing and innovative-driven development.

Even though those prospects into reality, foreign companies are ramping up investments, expanding their business lines and chucking mid-term-in-ion plans for steady growth with a new vision of China’s high-quality economic upgrade in the coming years.

Until recently, chief financial officer of Bayer Group Greater China, said: “Without any doubt, play a crucial role in impacting global growth this year as the world’s second-largest economy. We notice that various international financial institutions and investment houses have raised their targets for China’s economic growth this year.”

Highlighting the country’s immi-

market, sophisticated international investors are betting on China’s competitiveness and the improving business environment, he said. The Chinese market continues enter to a high-growth point for multinational companies, he said. It is a key to success.

He added that the multinational pharmaceutical company, which is doing a joint venture with Beijing pharmaceutical startup that will focus on chronic diseases, expects to boost the company’s productivity in China by 15 percent, by adding to its production capacity in the country.

Reform programs are at the heart of foreign companies here, said an official at Merck KGaA, noted that as China has opened up its role in foreign markets, companies are looking for ways to meet the regulatory requirements and then launch their products on the Chinese market.

“Some of the key programs that we see are focused on the Chinese market,” he said. “We are very pleased that the regulatory reforms that are being introduced in China are being implemented in a timely manner.”

He noted that the Chinese market is changing rapidly and companies are looking to meet the regulatory requirements and then launch their products on the Chinese market.

Guizhou’s bridge net reform as testament to how improved accessibility helped erase poverty

Editor’s note: The Consensus Forum 2023, with General Secretary Xi Jinping as the keynote speaker, has successfully concluded. President Xi Jinping delivered an important speech at the opening ceremony of the forum, in which he delivered an important speech. This speech has been widely praised as a testament to how improved accessibility helped erase poverty.

Guizhou’s bridge net reform as testament to how improved accessibility helped erase poverty

The number of bridges in Guizhou, which is also a relatively dense region, increased from about 2000 in 2000 to more than 20,000 in 2020. The province has made significant progress in the construction of transportation infrastructure, as well as improvements in the quality of life for its residents.

Some of the biggest changes have occurred in rural areas, where the number of bridges has increased significantly. This has improved access to services and jobs, and helped to reduce poverty.

In the past decade, Guizhou has made great strides in improving transportation infrastructure and cutting poverty rates. The province has implemented a range of programs to support rural development, and has seen significant improvements in education and health services.

In 2020, the province’s per capita GDP exceeded the national average and the poverty rate dropped to 0.88%.

In his keynote speech, Xi Jinping noted that “the Chinese people are proud of the achievements we have made in poverty alleviation.” He added that “the Chinese people have a strong will and have achieved significant progress in poverty alleviation.”

The Chinese people have a strong will and have achieved significant progress in poverty alleviation. The Chinese government is committed to achieving the goal of poverty alleviation and prosperity for all, and is working hard to ensure that all the people in the country can enjoy a happy life.

After catastrophe, only a handful of evacuated residents prefer to return

By WANG XU in Tokyo (wuxu@nikkei.com)

For the past 2 years, about 85,000, half of whom are children, have been living a bleak existence outside the Municipal Office of Fukuoka City, which functions as an evacuation center.

Their home of contention is the Ceren Draka Nuclear Power Plant, some 15 meters from the coast. Having been on alert since the tsunami, they have not been allowed to move back.

Their national government, which is running the evacuation center, has been feeling beleaguered, the said Mrs. Aomi, who is pregnant and has a 10-year-old child.

Nevertheless, over the years there has been a concerted drive to rebuild Fukuoka and bring back those who left. Now is one of the major concerns is what to do with the nuclear-contaminated waste in the plant, and in particular official plans to start using it in the future.

The toxic waste has been used to cool radioactive spent fuel at the Draka Nuclear Power Plant, and there is a possibility that it is also being used in swimming pools. The government plans to use the water in spring or summer.

“During the two winters, we have been to the site of the disaster, almost every month,” said Mrs. Aomi. “If the water from the plant is used, who will drink the water?"

The national government has been forced to face the question of whether it should be not only a question of what it has been thinking, but also of the people of Fukuoka when they needed it.

Nevertheless, over the years there has been a concerted drive to rebuild Fukuoka and bring back those who left. Now is one of the major concerns is what to do with the nuclear-contaminated waste in the plant, and in particular official plans to start using it in the future.

The toxic waste has been used to cool radioactive spent fuel at the Draka Nuclear Power Plant, and there is a possibility that it is also being used in swimming pools. The government plans to use the water in spring or summer.

There are many radioactive elements in the water, but the contaminated water is not used in the country.

In front of two of the power-generating units, we have been able to see the contaminated water for the first time.

The radioactive elements in the nuclear waste water will return to the human body through the food chain, including fish and seafood, and will affect the health of the people who will eat it.

In this area, there are many radioactive elements, and it is feared that the contaminated water may cause serious health problems.
Chinese banks had to sell securities at a loss to cover their withdrawals of foreign currency.

The bank had bought tens of billions of dollars of seemingly safe assets, primarily long-term US Treasuries and government-backed mortgage securities, the latter of which were ditched the night before the S
tability crisis.

When interest rates rise— as they have in recent years—the Federal Reserve tends to open the door to the world of the hard-core bonds. As a result, when rates start to rise, the US dollar tends to strengthen. The collapse of SVB was not unusual in the history of the banking system. The US Treasury, Federal Reserve and FDIC

US Senator Mark Warner, a Virginia Democrat, said on NBC News: “In the case of SVB, it wasn’t enough that SVSB failed to protect its depositors from the risks that it was undertaking.” The FDIC failed to focus on the risks that resulted in the failure of the bank.

The FDIC indicated that it had plans to sell the failed bank to another entity. The FDIC is responsible for ensuring that the deposits of failed banks are protected. The FDIC has been criticized for its handling of the Bank of the West failure.

Industrial chain sharpens China’s edge

By CHENGYU

donghao@dxy.cn

A recent article in the Global Times, China’s nation-wide newspaper, focused on the topic of industrial chains and its significance in the global market. The article highlights the importance of industrial chains in China’s manufacturing sector and their role in ensuring the country’s economic stability and growth.

The article begins by emphasizing the historic milestone achieved by China in the automobile industry, with the domestic production of more than 25 million vehicles in 2020. It goes on to describe how these chains have become a key element in China’s economic strategy, enabling the country to become a leading manufacturer and exporter of automotive products.

The article also points out that the Chinese automobile industry is facing challenges, particularly in the face of the global chip shortage. Despite this, China’s large domestic market and strong supply chains have helped the industry mitigate the impact of the shortage.

Furthermore, the article highlights the role of industrial chains in China’s technology and innovation efforts. It notes that China’s industrial chains are driving innovation and helping to establish the country as a leader in emerging technologies.

The article concludes by emphasizing the importance of industrial chains in China’s economic development and the country’s efforts to maintain and strengthen these chains in the face of global challenges.

Banks ramp up assistance to promote foreign trade

By JIANN XUANGING
Jinghua S. Zhang, Xianglin Zhang

Chinese banks have ramped up support for foreign trade enterprises since the second half of last year. As companies and trade delegations led by local governments go overseas to compete for orders and expand their businesses.

Bank of China, a large State-owned commercial bank, has taken the lead among its peers in releasing a cross-border financial service plan to support Chinese enterprises in their competition for orders overseas. The services, including settlement, exchange, credit enhancement, financing and insurance, will help foreign trade enterprises grow their business.

Over the past few months, an appliance manufacturer in Ningbo, Zhejiang province, has participated in various overseas competition for orders in Japan, Europe and the Middle East. Its orders are already scheduled until August this year.

During a trip to the United Arab Emirates, the company won nearly 80 million in new orders within just a few days. BOC has made financial solutions for the company based on its trade partners, transaction methods and settlement periods. So far, the BOC Ningbo branch has provided the company with more than 6 million in settlement services for new orders overseas.

As the China-Zhongying Aluminum Industry Co., Ltd., a company in Jiujiang, Jiangxi province, joined the local government’s team of competitors for orders in Malaysia and signed a contract for aluminum coil imports with a local company, the contract stipulated that the Chinese enterprise must provide an advance payment guarantee issued by a bank. But the importer wants to make an advance payment, BOC opened a “payment guarantee” account for the company, which was completed on the same day.

China Merchants Bank has also released its cross-border financial services to 30 trade delegations from overseas. It has participated in trade enterprises since November while also supporting the opening of local governments, received overseas orders and investments. During this period, BOC helped the company with orders and investments, with a total value of more than 1 billion yuan ($1.4 billion).

Changzhou Tianji Trading Co. Ltd., a small clothing exporter in Changzhou, Jiangsu province, faced a shortage of liquidity due to factors such as COVID-19 and the exchange rate’s fluctuation last year. China CITIC Bank Nantong branch recommended an uninsured trade loan product to the company. The product is developed by the bank for export-oriented small businesses that have purchased the small and micro enterprise credit insurance policy of China Export & Credit Insurance Corp., also known as Sinosure.

The Changzhou-based clothing exporter obtained a line of credit of 3 million yuan from China CITIC Bank, a national joint-stock commercial lender. Based on its actual needs, the client withdrew 600,000 yuan on Dec 29, nearly 14 million yuan on Dec 30 and about 5 million yuan on Jan 15 at an annual interest rate of 4 percent.

An executive of the exporter said the loan had greatly eased the company’s pressing capital requirement and would be repaid any time, allowing the company to make repayments promptly after meeting overseas trades, thus reducing its financial costs.

On Feb 3, the State Administration of Foreign Exchange launched the branch enterprise fund, matching service application system on its cross-border financial service platform, using the application scenario, foreign trade enterprises can independently release an early financing needs to one or three banks. With the authorization of the branch enterprises, foreign exchange mobilization can be converted into bank credits, and foreign exchange funds from overseas can be converted into bank credits.

China CITIC Bank Nantong branch provided the bank with the early financial services and assisted foreign trade enterprise in Wujiang, Jiangsu province, in the application scenario on Feb 20.

Lawmakers point to concerted efforts to boost supply, industrial chain resilience

By CHENG XU in Beijing and HU MEIXIANG in Fuzhou

More efforts are needed from private companies to drive digital transformation to boost the resilience of supply and industrial chains to higher-quality development, and the country’s lawmakers during the annual two sessions.

"More high-tech support is needed for traditional enterprises to drive digital transformation and green and carbon reduction to promote innovative industrial development," said CAI Jiazhong, president of Fujian Fuping Foods and a deputy of the 14th National People’s Congress.

"Promoting private companies to drive digital transformation is of great significance to pushing the manufacturing industry toward more quality and innovation instead of growth speed." said TANG Kefa, chairman of Pro骉Tek Foods and a deputy of the 14th National People’s Congress.

"We must ensure that private companies can access more support and financial resources to strengthen their capacity to innovate and improve their competitiveness," said CAI Jiazhong.

To increase enterprises' willingness to innovative and management spheres, CAI said, "There is a need to enhance market orientation and support enterprises with more talents and capital. Enterprises also need to enhance market orientation and support enterprises with more talents and capital. Enterprises also need to enhance market orientation and support enterprises with more talents and capital."
The 5 percent GDP growth target and the 5 percent fiscal deficit goal, set for the current year by China’s government, are the focus of this year’s economic development as the country looks to stabilize its economy and industrial supply chains.

China’s economic indicators have returned to normal since the beginning of 2023 as the COVID-19 pandemic has subsided. Earlier this year, the government announced a series of policies to spur economic growth and bring back consumer demand which has been missing since the pandemic started.

We begin this month's Economic Insight by looking at China's economic growth this quarter. But, externally, some major economic events and geopolitical uncertainties still exist. These may impact China’s economic development as it has seen a significant recovery in recent years.

EAGLE EYE
By Xu Qiyuan

**Interpretation: 5% growth target feasible**

Last Tuesday, there have also confirmed our estimates. China recorded a better-than-expected export performance during the first two months of the year. The nation saw its total imports and exports decline by 14 percent and 18 percent, respectively, in the first two months, which was a strong signal of economic stabilization.

China’s economy has benefited from the recovery in the domestic market, which was on track with the forecast of the Ministry of Commerce. This is because the country’s fiscal policy is relatively independent from the external environment. It is possible to implement an independent monetary policy according to domestic conditions.

On the other hand, there is room for reserve requirement cuts and interest rate cuts, but the bigger problem affecting China’s monetary policy at present is the low-speed transmission mechanism. The process under which currency liquidity is converted into credit is blocked to some extent. The strength of currency and consumer demand is expected to be further improved, and financial policy will be gradually injected into the market.

Down to changes in the internal environment, less homemade exports may drag on GDP growth in 2023. The pressure to stabilize foreign trade will thus increase significantly.

Domestically, the demand in consumer demand is likely to stabilize, followed by investments. Normally, consumption is the most-stable factor with the macro-economy. However, the wage- and cost-expected GDP growth in 2022 was largely due to wage cost.

Another major topic this year is to increase the liquidity of local government assets and revitalization of the existing holding companies. The national budget shows that the fiscal budget is rather small, which is the biggest challenge facing local governments.

Small print package key export revenue for pressure

Real GDP growth of developing economies will also face greater pressures from rising oil prices and lower oil production capacities. The financing structure of public goods, government spending, and administrative costs, should also be improved.

This year, the government sets some high goals for China to consolidate its position in global supply chains. The world may face some uphill battles and there are some questions about the future. Economic and financial stability of some developing countries, some developing economies will also face great challenges, especially in Europe, specifically Russia.

China’s GDP growth for the long forecast period, which has been revised to a positive outlook. Possible solutions include gradually extending the repayment period, increasing the support rate, and reducing the interest rate. In this regard, China and the International Monetary Fund may find new technologies to boost the local economy.

The writer is deputy director of the Centre of International Political and Economic Studies, Beijing.

The views do not necessarily reflect those of China Daily.
Government set to pursue high-quality development and common interests

The central government has done a good job over the past five years in keeping the economic growth rate at a high level, with its GDP reaching $1.246 trillion, a rank of fifth in the world. It has also been working hard to address the various social issues, making the country more harmonious.

However, some recent national and international incidents have raised some concerns about the future of the Chinese economy. These include the recent exchange rate changes, which could affect the country's trade and investment strategies.

The government has been making some adjustments to its policies in response to these challenges. It has been focusing on improving the quality of economic growth, rather than simply increasing the GDP. This is reflected in the country's increasing investment in technology and innovation.

The government has also been working to improve the country's environmental protection and sustainability. It has set a target of net zero emissions by 2060 and is taking steps to achieve this goal.

In addition, the government has been implementing policies to address income inequality and poverty. It has been increasing its投入 to education, health care, and social security, which are important for improving the quality of life for the country's citizens.

Overall, the government is committed to pursuing high-quality development and ensuring a better future for the Chinese people. It is taking steps to achieve this goal and will continue to do so in the years to come.

Reform of ministry to boost self-reliance

A part of the government spending plan that the US President is proposing on Thursday, the US defense budget will increase by 6%, or $115 billion, to $1.9 trillion in FY 2024. The increase is aimed at addressing the growing threat from China.

The proposed budget for Pentagon next year will go to US Congress, indicating Washington’s persistent efforts to win the war of influence and power against China.

The US military expenditure is expected to increase to $560 billion in FY 2024, which is a 5% rise from the current year.

The US military budget is expected to be $700 billion in FY 2024, which is a 6% rise from the current year.

What They Say

Laughter puts spotlight on Washington’s role in Yemen

A group of Yemeni farmers, who have been forced to flee their homes due to armed conflict, have put on a “metallic” costume at the start of their annual festival to entertain the crowd.

The festival, which is a traditional event, is held on the outskirts of the capital, Sanaa, and attracts thousands of spectators each year.

The farmers, who are mostly from the impoverished rural areas, have been using the festival to highlight their struggles and to demand peace.

Lawrence: No permanent solution for Yemen

The number of Yemeni who have returned to their homes since the beginning of the war in 2015 is estimated to be 800,000.

But the conflict has not ended, and the situation remains precarious.

The United Nations has called for renewed efforts to stop the conflict and to ensure a lasting peace.

Using science and tech to promote modernization

The Ministry of Science and Technology will be held Reform conference on science and technology in the 14th Five-Year plan period. The conference theme is "promoting scientific and technological innovation in the new era, implementing the strategy of innovation-driven development, and realizing the great rejuvenation of the Chinese nation". The conference will focus on promoting strategic science planning, resource allocation, coordination, regulations, supervision and inspection. The conference will also highlight the new science and technology system reform to promote scientific and technological innovation, build a new national science and technology system, strengthen the improvement of the national science and technology system, and enhance the capacity of the national science and technology system.

In recent years, the Ministry of Science and Technology has been actively promoting scientific and technological innovation in the new era. The Ministry has implemented a series of measures to enhance the national science and technology system, including the strengthening of strategic science planning, the optimization of scientific and technological allocation, the implementation of science and technology reform, and the enhancement of science and technology capacity. The Ministry has also been actively promoting scientific and technological innovation, making significant progress in scientific and technological innovation.

Improving governance for the good of people

The Party and State institutions refer to the central and local organs of the Communist Party of China, a move to modernize the governance system and enhance governance capacity, and a reform to establish a modern governance system at home and abroad, in order to promote high-quality development. The Chinese government, in conjunction with the implementation of government services to better serve the people. There are changes in the country's central leadership, with numerous experienced leaders already assuming higher positions to help order the ship of state. China has signed a number of agreements with global countries, Chinese President Xi Jinping's leadership.

The key points of the reform plan are for the good of people. In the light of the 14th Five-Year plan, China has given 11.4 billion people a better life. While a few people are still in poverty, China has made a significant contribution to poverty alleviation. It has lifted 690 million people out of extreme poverty, a feat that was previously deemed impossible. The leadership has also made significant progress in environmental protection, with major industries transitioning to new energy and renewable energy. This has improved the quality of life for billions of people.

The main purpose of the reform plan is to improve governance for the good of people. This will involve strengthening the Party's leadership and improving governance. The reform will also involve streamlining government responsibilities, improving governance for the good of people, and enhancing the capacity of the national science and technology system. The reform will also involve promoting the development of the Party and State institutions and improving the quality of governance. The reform will also involve improving governance for the good of people, and enhancing the capacity of the national science and technology system. The reform will also involve promoting the development of the Party and State institutions and improving the quality of governance.
Absurd turbulence and change

The international community should work together to curb various crises to ensure the world goes in right direction.

Since 2004, the United States has chosen to drag Europe to an abyss, relegating the Ukrainian from. In view of its current policy, the United States will not only encourage China and Russia to compete in order to limit the US’ geopolitical reach and economic power, but also to many extent to promote the two countries to compete with each other. The US aims to neutralize China and Russia as a counterbalance to the US strategic interests.

China-EU partnership is assuming greater global significance amid the increasingly unstable international situation.

Global views

Amid turbulence and change

Zhong Feng

The report to the 20th National Congress of the Communist Party of China said the world has entered a new period of turbulence and change, which was strategic significance for China’s external environment. The most prominent feature of the period of turbulence and change is the "cross-ethnic effect". Where global development is selected, the history and theory of international relations reveal that crises in world politics are the breakdown of education, human social laws, and political systems. Without stability and balance, turbulence and change, and war and conflict often occurs. Today, this has become more prominent that world politics has entered into a worrisome period of turbulence and change.

The Russia-Ukraine conflict broke out on Feb 24, 2022, the Joe Biden administration and European countries chose not to directly send troops to intervene to stop Russia’s strategic and military moves. Instead, they chose to implement all-embracing sanctions against Russia and Russia to induce or even halt the imports of Russian oil and gas. They also provide the Ukrainian government and its military with weapons and counterterrorism, intelligence support, and financial assistance, which unprecedentedly heighten the capacity and deterrence of the Ukrainian people and people to respond to military threats. Joe Biden administration and its long-standing emphasis on Ukraine has resulted in high-profile support for Ukraine. Ukraine President Volodymyr Zelensky’s visit to the White House in December and his subsequent speech in the US Congress have made it clear that the nature of the Ukrainian conflict is not only a question of the right and wrong of the Cold War decision, but also the future of the US-Ukraine relationship.

Second, the United States has chosen to stand high, in its relations with China. The Biden administration is pursuing the US’ remnant strategic isolation policies and conflict creation with China. If US policy towards China is determined, it is to drive a wedge between China and the US.

In theses years, the United States has chosen to develop its economy in its relations with China. The Biden administration’s economic policy is to use technological and trade tools as a leverage against China and to create political and economic opposition among all parties.

The longer the conflict between Russia and Ukraine goes on, the more serious political and economic troubles will pose to Europe and the world, as it will eventually affect the world economy and order.

The Chinese position remains consistent and stable. The benefits of mutual benefit and cooperation between China and Europe will be realized.

China-EU partnership is an important part of the global partnership with China. Its significance is as follows.

First, China and the EU share similar goals and values, especially on promoting peace, development, and world prosperity.

Second, the China-EU partnership is the most successful example of regional cooperation in the world. It is characterized by equality, mutual respect, and win-win cooperation.

Third, the China-EU partnership is a model for regional cooperation that adheres to multilateralism and the principle of non-interference in each other’s internal affairs. It is a model that promotes mutual understanding and respect for each other’s differences and systems.

Fourth, the China-EU partnership is a model for regional cooperation that promotes peace, development, and prosperity. It is a model that promotes sustainable development and the rule of law.

Philosophical soul music

Composer combines ancient wisdom with metaverse to explore different sounds, Chen Nan reports.

On March 4, award-winning composer Tan Dun joint music world, Five Rails, was released. With five movements written for a small ensemble, featuring water percussion, koto, strings and didgeridoo, the music work often listeners a glimpse of the composer’s interpretation of the metaverse.

“Five Rails” is the latest and most “bionic” work, which has an impact on daily life as a composer. To show in the breathing trend, which makes me think”, says Tan, based in New York, online on his virtual voice.

Frankly inspired and inspired by ancient Chinese philosophers such as Laozi and Zhuangzi, who also provided understanding of the universe, especially ideas about people living in harmony with nature, the composer created the new work to display his own theory: ‘by merging the natural and art” through the exploration of different sounds.

Tan calls this work “music en esoria”, and the tile movements to have: Spring, Voyage, Seoul, Shanghai, New York, and Tokyo. In addition, he wants to use traditional Chinese instruments, such as a pipa player. The recording of Bud­dha Passion (also released by Sony Classical) on Apr 7.

The world premiere of a recording of Tan The Town of Nature will follow in September. Also to release by Sony Classics, the 25-minute percussion concert was written after three major natural disasters: the Wenchuan earthquake in Southwest China’s Sichuan province in 2008, the tsunami in Japan in 2011 and the nuclear family, which caused significant damage in the United States in 2012, all of which personally affected Tan.

The Show (Online) displays the composer’s reflection on the relationship between human beings and nature. Influence the natural world, wariness and compassion are on the ears.

“I was born and grew up in a small village in a remote province. I was a schoolboy, while the radio running around is water to my ear. Nature is close to me, and I always respect and admire its power”, says Tan, who is keen on making music with nature, from water to paper, rocks, and metal.

“As a child, my grandparents told me stories about nature, which made me believe that the things in the world, such as stones, rivers, and plants, are like the music of the soul. If you lay your grandparents once told him.

“Being tied by time, space-clawing the sky from the window, I cannot always accompany the moving clouds and changing daylight. Nature is the best artis’, he says.

The Northumbria Jazz Festival in England, the Amsterdam Festival in the Netherlands, the Beijing Botanical Garden, the Shangh ­hai Symphony Orchestra under the baton of Chen, his music is played.

“Two or three goals in my heart. Not only want to develop cross-cultural ideas that bring natural and music, the ancient and modern, together”, Chen’s ambition.

LIFE

Many people, when they hear the term "earthquake," think of the woman of the Tibetan: Zeren Zhima. As she grew up, her surroundings were very different. She became the first female tectonic seismologist in China. However, Zeren Zhima does not claim any special status or achievements.

She is often seen carrying a large laptop with complex diagrams and data, but these are only part of her profession. At the age of 18, she transferred from physics to computer science, but she found that it was not suitable for her. She is now studying seismology, which she finds fascinating.

In her homecoming graduation ceremony, she received the highest mark in the class, which is a great achievement for a student from a small village in the southwest of China. The seismology department of the University of Science and Technology of China congratulated her on her graduation.

Zeren Zhima was born in 1999, the year of the millennium. In her childhood, she dreams of becoming a famous woman, which is based on her own ambition and determination.

Her parents, who were both teachers, were very proud of her. They believed that their daughter could achieve great things.

Zeren Zhima graduated from the University of Science and Technology of China in 2021. She is now working as a seismologist in the Department of Geophysics at the University of Science and Technology of China.

She is now working on a project to improve the accuracy of earthquake prediction, which will help people in areas prone to earthquakes.

Showing the Well Forward

Head coach Zheng Wei eager to build on successes with Chinese women’s team in pivotal year for young squad

Zheng Wei is thrilled after the 81-76 victory over Team China to win the FIBA Women’s World Cup in Sydney last September, news she described as “a dream come true for Chinese basketball.”

The victory over the five-time world champions was the highlight of China’s campaign at the World Cup, which they won in their 10th appearance. The win was particularly important for Zheng’s team, which had competed in the previous World Cup in 2018.

Zheng’s team had a tough road to the final, defeating Brazil in the quarterfinals, France in the semifinals, and Spain in the final. The win was a testament to the team’s hard work and determination, and a validation of their efforts.

The victory also marked the end of a long drought for Chinese basketball, and it was a momentous achievement for the team and their fans. The victory was a source of pride for the nation, and it was a significant step forward for the development of women’s basketball in China.
