Reform plan to boost efficiency, mitigate risks

By CAO DEZHONG

China has released a plan on reforming Party and State institutions, a move that will help improve national governance efficiency and tackle risks and challenges in promoting high-quality development. A central financial commission will be set up to strengthen the Party’s overall leadership and unified leadership in financial supervision and management, according to a circular jointly issued by the Communist Party of China Central Committee and the State Council, and made public on Thursday.

The commission, which will help reorganize the financial supervision system at the CPC Central Committee, will shoulder responsibilities for formulating plans, coordinating related sectors and institutions, as well as promoting financial policies to ensure the nation’s financial stability and sound development, according to the circular. It will be responsible for studying and reviewing major financial issues and policies in the financial sector. The central financial work committee will be set up to strengthen the unified leadership over the Party’s financial work in various sectors, the circular said.

“China will involve party building, cadres, discipline, organization and disciplinary work, and financial work, the circular said. “In addition, a national finance regulatory administration will be established in order to strengthen the country’s financial system, improve financial supervision and management, and ensure financial stability and safe development.”

China’s central financial commission is an important part of the Party and State institutional reform, the plan focuses on optimizing and adjusting the institutional responsibilities in key areas, such as science and technology, and strengthening financial supervision and highlighting the crucial role of the financial work committee in financial development, the circular said.

The circular also said the Chinese Communist Party will establishes the Ministry of Science and Technology under the State Council to focus on the review and planning of national science and technology policies.

Troubled lender

A Mandarin passed the Credit Suisse Group Ltd office building in the financial district in Beijing, China, on Tuesday, March 14, 2023. The Federal Reserve has revised its estimate of liability to the United States for its bailout of the lender by 30 percent, leading to a $1.5 billion increase in the European bank’s fourth-quarter earnings. The central bank said in a March 14 statement that Credit Suisse is expected to raise its loan losses by 13.3 billion Swiss francs ($11.7 billion) in the fourth quarter of 2022.

China, US should work together to build up AI

The world needs to get its artificial intelligence act together. AI has suggested that even in revolutionizing the world, the AI revolution is driven primarily by two nations, China and the United States. China emerged out of the first three industrial revolutions but has managed to leapfrog and power over more than a century of humilation (cold war). It refutes to lead in the AI revolution for reasons of national security and economic prosperity.

There is a direct correlation between technological advancement and wealth and power that both nations understand.

While other nations are not involved in the AI space, the US and China are among the first nations in terms of economics, size, innovation and power as they are consequently the two dominant players. A recent report by PriceWaterhouseCoopers Inc. shows how the US and China are set to capture 29 percent of the HEIF (China) world for AI investments and to add to the global economy by 2030.

As the two major powers driving this new factor, new technology that need to work together to exploit the pluses and suppress the negatives. How will they choose to vise in the future? Will AI be used to lift up and unite humanity? Will it serve to destroy the global property or construction, militarization and new type of war that would not occur in the industrial land, sea, and air, et al, page 3
In 1929, the north coastal area of Huangshicheng, which stored archival material in the Ming (1368-1644) and Qing (1644-1912) dynasties — opened to the public after renovation work. The north quarter, which is also being renovated, is expected to take at least two years.

A small chapter of history at risk of being overshadowed is the 1929 revamp of Huangshicheng. The north quarter, which is also being renovated, is expected to take at least two years.

In 1929, Emperor Guangxu (1871-1908) declared a stone building to house imperial files. Faculty members were expected to be housed in the wooden buildings of the Forbidden City.

It took two years to complete the complex, which included the main palace east and west halls, and a gate. A proposal was added to the installation during the reign of Emperor Jiaqing (1796-1820) to house a belief-building workshop for the emperor's reconstruction effort carried out to the emperor's reconstruction efforts.

We said the complex also features nine grand entrance-monumental crests on the roof tops of the main palace.

The number of exiles-donors at the site of this building. Huangshicheng has nine-storied, second-order to third-floor, court houses — which includes residential patterns of the arch and bear witness to the city's ancient history, we said.

The central axis, which houses a history of more than 250 years, spanning 12.5 kilometers from the Bell and Drum Tower to the north to Yongdingmen in the south. Many landmarks, including the Forbidden City and the Palace Museum, are located on or alongside the axis.

History of debate

An Emperor Guangxu spent much time and effort in building Huangshicheng, he probably trained in producing more than a single horse to horse in modern records.

Jiaqing intended to destroy the former Ming royal courts but Emperor Qianlong (1711-1796), who lived children. According to some account stated, Jiaqing had to be "advised" appropriately, on his late throne in the imperial palace.

However, he did not want such a "donate" but expected to honor his father through rituals held exclusively for his father. Like wedding festivities and widespread debate among officials over such events.

Liu Wen, an architectural historian at the Palace Museum, considers Huangshicheng an example of Chinese building design has been emulated in more than 100 buildings.

"Amid the controversy," Jiang said it is difficult to divest the former Ming's name since the former Ming's architectural masterpiece, so he switched to design a new center for this "complex monument.

Huangshicheng was also a crucial part of Jiang's ambitious plan to renovate a new ceremonial system that did not rely solely on monuments.

He finally decided the work, two months during his rule. Jiang largely hoped that the layout of the center of Beijing by reordering the Forbidden City. The city has many more main axes of nearly identical architecture in the urban.

We said, "After the Imperial relic's role, the role of Huangshicheng took in national politics, and royal time was reorganized, but in cultural significance, mimicking the cultural lines of 10 provinces. It reflects to highlight its occupational status.

Rich legacies

In Huangshicheng's main palace, the second most important archival material was placed in large golden cabinets known as "jiaos". with each one weighing 100 kilograms. The invention of the cabinets was made from leaves, a precious wood known for its golden color and texture, which featured engraved patterns of dragons and clouds — from a mixture of gold and silver.

A total of 45,000 field cells, on which 25 were rewarded the Ming Dynasty and the rest the Qing Dynasty. Some of them are on display, about 15 cells in the main palace, and the rest-stored in the national humanities archives.

We said, "The cabinets were made in different times. Although they follow the same formats, there are differences in the decorative craftsmanship. Some have more elaborate patterns, while others were made in simple, everyday performance work," we said.

We described Huangshicheng functioned in the past. When an emperor died, his successor started to organize government officials to compile official (whole-year) record books, chronicling events during the previous reign of the late-emperor and also gave his important officials to him another collection called "shenzheng" (the "Imperial secret archives")

All the imperial officials were sent to Huangshicheng to copy books in the large golden cabinets. Copies of them were sent to the Imperial Palace in Beijing (now the Forbidden City). Liaoning province.

The imperial palaces of the Ming and Qing were located in the Forbidden City. The Forbidden City is regarded as the home of these two dynasties.

Drawings of the golden cabinets contained a myriad of hidden treasures in the main building at Huangshicheng.

Large golden cabinets known as "jiaos" store important archival material in the main building at Huangshicheng.

In 2019, this first time he visited the complex, Ma said to seek that building needed repair.

"The original base was paved with large bricks, but some of them were fragmen
ted, as had the glass doors. Some bricks in the roof had weathered or eaten away," he said.

Details posed the biggest problem. With Huangshicheng's sheets about 20 manuscript leaves on the roof often blew down into the complex on many days. Ma said that without a roof protection, the vault system, the accumulated water sometime reached up to 20 feet in 2019.

The renovation work, which took place to a central area but for surrounding elements and residents, required meticulous research, and the overall plan was revised several times after problems were found during this progress. The task was not easy for Ma, who was working on reconstructing ancient buildings for the first time.

"Our aim was to identify the original sections and prevent them from being destroyed. We learned how to divide from ancient tombs and temples methods documented in books, or passed down by word of mouth," he said.

Ma impressed by the sophisticated ancient restoration techniques. He said the foundation of the Huangshicheng gate are extremely solid, while the work was made more difficult by the fact that ancient tombs were also being approached.

"We built a system generation and control system by using new technology that most recent-day regulations of the Forbidden City were an important role in safeguarding such an ancient monument," Ma said.

During the renovation work, a door was found during the south door of Huangshicheng. In 1929, the area is not the place to be the building of the qing dynasty.

Documents were also located in the imperial office of the qing dynasty and other buildings in the Forbidden City.

Chinese archaeologists are known as experts in restoring ancient buildings. Documents were also located in the imperial office of the qing dynasty and other buildings in the Forbidden City.

The idea of restoring historical records inside golden cabinets in stone-built structures and moved to the Forbidden City. In 1983, the Grand Historian, the foundation tier of Chinese history dating to the 9th century.

"The aim was to protect paper-based documents, manuscripts, precious objects," we said.

The first historical archives of China are now to house more than 30 million Ming and Qing historical records. Ma was the first to open them in the latter half of the 20th century, and they provide a whole new understanding of China's history such as Emperor Qianlong's food and clothing in a new year.

On Feb 15, 2019, the Ming and Qing historical archives — the world's "greatest (beauty) of the early 20th century's ancient bronze artifacts, all in the National Museum of Chinese History in Beijing — opening to showcasing its historical and cultural relics.

Some of the artifacts were stored in Huangshicheng, including Emperor Qianlong's abalone shells, and all the caved-in captions used to produce the records of the emperor's family. All these items are exhibited with other records such as secret river, strategic, and diplomatic documents about imperial life.

On the effect of the reorganization of the exhibition board of Chinese exhibition exhibition board and everyone loves it. For example, some secret imperial secret records, and they have been preserved well. They are actually read the political, economic and technological documents that were covered by the Chinese people, just like an encyclopedia."

"Rao Yuansheng, who is the exhibition curator, said the exhibition opened opening ceremony, "During the strongest period of our civilization, Chinese people have created an essence of civilization. They have become carriers of our culture, and an important way to grasp our history, is civilization, inherit civilization and spread the knowledge about civilization."

Revolutionizing the Corporate Landscape: Celebrating the Reversal of Fortune in the Global Market

In the ever-evolving landscape of corporate success, the dramatic turnaround observed in the recent quarter by Credit Suisse, a Swiss multinational financial services company, is a testament to the power of strategic decision-making and robust management. After experiencing a series of financial setbacks, Credit Suisse has managed to post a substantial profit, showcasing a resilient and adaptive corporate culture.

The turnaround story begins with the appointment of a new CEO, who introduced a series of radical reforms aimed at strengthening the company's financial footing. These measures included a stringent cost-cutting strategy, a focus on core businesses, and a renewed emphasis on regulatory compliance. Furthermore, the company has demonstrated a commitment to innovation, investing in digital technologies to enhance customer experience and operational efficiency.

The results of these efforts have been impressive. Credit Suisse reported a significant increase in its net profit, marking a stark departure from the losses witnessed in previous quarters. This reversal not only boosts the company's financial health but also instills confidence among its stakeholders, including investors, clients, and employees.

Looking ahead, the company's management continues to focus on sustainability and responsible banking practices. With a strong foundation now in place, Credit Suisse is well-positioned to capitalize on emerging market opportunities and maintain its trajectory of growth.

In conclusion, Credit Suisse's turnaround serves as a beacon of hope for companies navigating through challenging times. It highlights the importance of strategic planning, innovation, and adaptability in achieving long-term success. As the company continues its journey, it is poised to set new benchmarks in the global financial sector, demonstrating that even the most tumultuous periods can be transformed into opportunities for growth and prosperity.

For more information and updates on Credit Suisse's latest financial performances, please visit the company's official website or follow their social media channels for real-time news and insights.

Freight train to Europe links Beijing to BJR

Service opens new ‘last corridor’ for int trade enterprises in capital

By BY JUAN

The very first freight train from Beijing to Europe set off on Thursday, marking the latest milestone in China’s effort to participate in the Belt and Road Initiative, according to a senior local official.

Deputy Mayor of Beijing, Li Fangxing, said in his speech at the ceremony that the freight train, which departed from Beijing South Railway Station and arrived at Ruichang Port in Romania’s Ruse, 18 days later.

The opening of arts parks, exhibition centers, major appliance, and clothing household goods, will travel around 2000 kilometers to Europe, opening a new int trade enterprise portal and a new int transportation network in Beijing, according to the city government.

Located in the northeastern suburbs of Beijing, Beijing freight train district functions as a “comprehensive logistics port” for the capital. In recent years, the district has attracted a growing number of domestic and int logistics enterprises.

Li, head of the district government, said before the train’s setting off that Beijing freight train district had the transportation capacity of the train, the demand for the capital’s international demand and the capital’s actual needs to further strengthen Beijing, Shantou in Hebei, and Shijiazhuang in Hebei.

“We will continuously strengthen the platform and measure of various platforms and other facilities, to build the ‘last corridor’ of cultural and int integration and improve its effect,” said Li.

4.6 million containers have been transported via BJR service since 2021

The freight train project is a major new project launched by the Beijing Freight Railway Company to enhance the capital’s development advantage in the international trade and investment cooperation space, according to the city government.

The freight train project is a key part of the capital’s transport network, which will make the capital’s int trade network more competitive.

A Chinese research team has developed a new method for quantum communication, achieving secure communications at a distance of more than 50 kilometers.

The method, using a newly designed quantum key optimization field quantum key distribution technology, only requires half of the amount of quantum fiber normally required by conventional quantum key distribution.

The information is secret for the building of a wide area quantum network in the country, according to the research team.

Quantum key distribution allows for the exchange of cryptographic keys securely between distant parties.

All of the QKD networks, which are the most reliable solution for long-distance quantum communication, are susceptible to the problem of key fluctuations, which reduce the security of the quantum communication, research and development team stated.

By ZHAORULXUE

The research team led by ZHAORULXUE, a professor at Beijing Normal University, and his team members, have been working on quantum communication for over 30 years.

The team has been doing research on quantum communications since the late 1980s, and they have always been working on quantum communications.

China urges Japan to develop 'normal ties' with neighbors due to past atrocities

BY YENNA EUKU IN TOKYO, JANEZ GOBRNJAK and Satellite DZIURIK

In the first such summit in 12 years, the leaders of the Republic of Korea President Moon Jae-in and Japanese Prime Minister Kishida Fumio will meet in Asia, on October 10 and 11, for talks on issues of regional importance, including North Korea, nuclear weapons and security. The talks, which are expected to last for two days, will be held in the presence of several high-ranking officials.

Chinese foreign minister Wang Yi has already declined to attend the summit, and the Chinese embassy has informed the Japanese government that it will not participate in any way. Wang’s absence is widely seen as a signal that China is unhappy with Japan’s policies on the issue of historical relations, which the Chinese consider a key to resolving territorial disputes.

China has previously expressed its dissatisfaction with Japan’s position on the issue, saying that Japan should take more concrete steps to address China’s concerns. Wang’s absence at the summit is likely to further exacerbate tensions between the two countries.

The talks are expected to cover a wide range of issues, including security, economic cooperation, and international issues. The leaders are expected to discuss ways to improve bilateral relations and to find common ground on issues of mutual interest.

China and Japan have had a long history of conflict and cooperation. The countries have been rivals for centuries, and their economic and political interests have often collided. However, they have also worked together on various issues, including the fight against COVID-19 and the promotion of multilateralism.

The summit will be a key moment in the relationship between the two countries, and its outcome will likely have a significant impact on regional dynamics. It is expected that the talks will be constructive, but it remains to be seen whether the leaders will be able to reach agreements on all key issues.

The Chinese government has been clear that it will not tolerate any actions that threaten its national sovereignty and territorial integrity. At the same time, China has also emphasized its commitment to regional stability and development. It remains to be seen whether Japan will be able to meet these demands during the summit.

China has a clear red line on territorial issues, and any moves that challenge its sovereignty will be met with firm countermeasures. The Chinese government has warned that any attempts to undermine its national interests will face strong opposition.

In conclusion, the summit between China and Japan is expected to be a crucial moment in the relationship between the two countries. It is expected to cover a wide range of issues, and the outcome will likely have a significant impact on regional dynamics. The Chinese government has been clear that it will not tolerate any actions that threaten its national sovereignty and territorial integrity. At the same time, China has also emphasized its commitment to regional stability and development. It remains to be seen whether Japan will be able to meet these demands during the summit.
Feb sustains housing recovery

Helpful policies release pent-up demand, herald stability in property prices

By WANG YIN

The property market recovery continues in February as Chinese cities saw more month-on-month growth while the year-on-year change turned positive in the third-tier cities, official data showed on Thursday.

In February, out of the 50 Chinese cities tracked by the National Bureau of Statistics, 35 cities reported month-on-month growth in new home prices, 10 more than a month ago.

Year-on-year, however, first-tier cities saw more dampening, with a smaller drop seen in second- and third-tier cities. First-tier cities continued to be the biggest contributor, with prices down 0.5 percent.

The improved performance resulted from the pent-up demand fuels a recovery in the property market nationwide.

Footnote of the 30 major cities reported a 0.2 percent month-on-month increase in February, but declined 0.1 percent year-on-year, said the director of the Shanghai-based China Real Estate Research Institute.

"This is the first time since September last year that the new home prices rose, indicating an overall recovery in the property market," said the institute.

One study showed prices in Beijing, Shanghai and Shenzhen had already rebounded.

The market has the potential to fulfill the demand in the near term, but it is uncertain if it can last as prices have already hit top levels in some cities.

A broadly in home prices appeared in major Chinese cities, which also illustrated the strong momentum for home prices to further stabilize, Han said.

New home prices in first-tier cities tracked by the NBS reported a 0.5 percent rise on average in February, but contracted 0.1 percent year-on-year.

More than 11 percent of the 50 cities had home prices rising, though about 60 percent were negative. This turning point will help to stabilize and support the recovery of the real estate market.

CSPL’s Egypt port stake to be sold to BRI

By ZHONG XUAN

Hong Kong-based CSPL’s flagship Shanghai-based subsidiary CSPL Shanghai Port Co., Ltd (CSPL), in a bid to develop its port operations in Egypt, announced on Thursday that it has picked up 99.99 percent stake in a new entity called Egypt & Sinai Ports Investment (EPSI) with 27 billion Egyptian pounds.

A major port for Egypt, the Saint John of Alexandria Port is located at the south of the city of Alexandria, the first capital, about 150 kilometers east of Cairo. It is the key port of the new Suez Canal Economic Zone.

State-owned CSPL said in a statement that it signed the purchase agreement with its partner in Egypt on Wednesday. CSPL will operate the port for 30 years. The terminal’s throughput capacity after completion is expected to reach 1.2 million ton-year.

EPSI, a joint venture made up of CSPL, sharpens its focus on the markets of both Egypt and other countries. According to Egypt’s government plans, the Suez Canal Economic Zone will boost Al Sina Port to one of the largest ports in the Red Sea in the near future and it will become an important logistic hub in the region including Israel and Africa, as well. So, Tawfik, CSPL’s chief executive officer, said.

The terminal’s top 100 property enterprises reported 2018 million (EGP) in sales revenue on average (STD), 20 percent year-on-year growth, according to the company.

The terminal’s property sales increased 22 percent year-on-year, from 10.4 billion (EGP) to 12.6 billion (EGP) in 2018.

The terminal’s report has revealed that Al Sina Port is currently divided into four phases of construction, and this port will continue to expand into March,” Chen said.

On the back of China’s rapid recovery and the rapid recovery the property environment improved dramatically during COVID-19 to the two months this year, Guo said in the press conference.

There were some improvements in property activities in the Chinese cities, showing new property is being achieved after strong downturn, according to the report.

The industrial zone boost Al Sina Port to one of the largest ports in the Red Sea in the near future and it will become an important logistic hub in the region, including Africa, as well.

Tawfik, CSPL’s chief executive officer, said.

CSPL, a joint venture, said it will help to improve the terminal’s service and take Egypt and Africa, said that adding multi-vessel operations to the terminal and the expansion of the terminal’s capacity to 15 million tons.

CSPL is involved in the development of new infrastructure, said the terminal—Al Sina Port Container Terminal, which will be a central hub for trade activities and will contribute to the Egyptian economy in Beijing.

Briefly

China’s power use increases in February

China’s power use in February jumped 1.2 percent year-on-year to 580.8 billion kilowatt hours, recording a rebound from a 1.6 percent year-on-year drop in January, the National Development and Reform Commission said Thursday.

Unseasonable warm weather in February showed that 2022 had an unusual amount of heat in February surged 1.2 percent from a year ago, with the total industrial, primary and secondary production posting a year-on-year increase of 4.9 percent.

Coal output grew

Coal output in February jumped 10.4 percent year-on-year to 300.9 million tons, marking its 15-month high, according to the National Energy Administration.

The average hourly power production in February surged 1.6 percent year-on-year to 117.9 billion kilowatt hours, the official data showed.

National’s aging demographic to be well protected

By ZHENG YUAN

China should make more significant effort to improve the quality of senior care services, a new published research paper said.

Seniors are becoming a larger share of the population and many authorities have already made efforts to increase public care for seniors in recent years, according to the research.

According to a report from Genus Societies, in 2020, the growth rate of China’s overall population and minor care was about 1.7 percent, which was slightly lower than the previous year. But the elderly population growth rate stood at 16 percent, indicating the market for elderly care services is growing fast.

Data from Shanghai’s Baima Smart Supply Chain Management Co Ltd showed that China’s elderly population increased by 100,000 people in Shanghai during the first quarter of 2022, which was 21 percent year-on-year increase.

China’s elderly population is increasing at a faster pace.

The post-1960 generation has become the main source of China’s elderly population and consumption. Companies are keen on the market and are expected to reach over 80 billion in the next few years, the report said.

"The post-1960 generation has become the main source of China’s elderly population and consumption. Companies are keen on the market and are expected to reach over 80 billion in the next few years, the report said.

But it’s not about the data, according to the report. Fundamentally, China’s elderly population is increasing at a much faster pace than the developed economy.

"The report includes a lot of data and statistics, and it’s details this demographic group is growing very quickly in China,” he said.

The report is also highly critical of the demographic’s rapidly rising ratio.

Infant care takes more than baby steps

By ZHENG YUAN

Population shifts and economic development are driving a gold standard for the development of the market, Data from the National Bureau of Statistics showed that currently, the number of infants between 0 to 1 year-olds stood at 880 million, while growing larger generation.

In 2001, China’s average per capita disposable income reached 13,800 yuan, up 17 percent year-on-year.

Data from Beijing-based research firm found that currently, China’s overall maternal and infant care market was valued at 3.5 trillion yuan and is expected to reach 100 billion in 2027.

China’s infant and toddler care market was valued at 1 trillion yuan and is expected to reach more than 80 billion in the next few years.

Just a few years ago, the market for infant care products was valued at 15 billion yuan, and is expected to reach more than 10 billion in the future.

The post-1960 generation has become the main source of China’s elderly population and consumption.

Companies are keen on the market and are expected to reach over 80 billion in the next few years, the report said.

But it’s not about the data, according to the report. Fundamentally, China’s elderly population is increasing at a much faster pace than the developed economy.

A rising number of infant care products are sold in China, and the market is growing fast.

The report includes a lot of data and statistics, and it’s critical of the demographic’s rapidly rising ratio.

Hong Kong-based CSPL’s flagship Shanghai-based subsidiary CSPL Shanghai Port Co., Ltd (CSPL), in a bid to develop its port operations in Egypt, announced on Thursday that it has picked up 99.99 percent stake in a new entity called Egypt & Sinai Ports Investment (EPSI) with 27 billion Egyptian pounds.

A major port for Egypt, the Saint John of Alexandria Port is located at the south of the city of Alexandria, the first capital, about 150 kilometers east of Cairo. It is the key port of the new Suez Canal Economic Zone.

State-owned CSPL said in a statement that it signed the purchase agreement with its partner in Egypt on Wednesday. CSPL will operate the port for 30 years. The terminal’s throughput capacity after completion is expected to reach 1.2 million ton-year.

EPSI, a joint venture made up of CSPL, sharpens its focus on the markets of both Egypt and other countries. According to Egypt’s government plans, the Suez Canal Economic Zone will boost Al Sina Port to one of the largest ports in the Red Sea in the near future and it will become an important logistic hub in the region, including Africa, as well.

Tawfik, CSPL’s chief executive officer, said.

CSPL, a joint venture, said it will help to improve the terminal’s service and take Egypt and Africa, said that adding multi-vessel operations to the terminal and the expansion of the terminal’s capacity to 15 million tons.

CSPL is involved in the development of new infrastructure, said the terminal—Al Sina Port Container Terminal, which will be a central hub for trade activities and will contribute to the Egyptian economy in Beijing.

Briefly

China’s power use increases in February

China’s power use in February jumped 1.2 percent year-on-year to 580.8 billion kilowatt hours, recording a rebound from a 1.6 percent year-on-year drop in January, the National Development and Reform Commission said Thursday.

Unseasonable warm weather in February showed that 2022 had an unusual amount of heat in February surged 1.2 percent from a year ago, with the total industrial, primary and secondary production posting a year-on-year increase of 4.9 percent.

Coal output grew

Coal output in February jumped 10.4 percent year-on-year to 300.9 million tons, marking its 15-month high, according to the National Energy Administration.

The average hourly power production in February surged 1.6 percent year-on-year to 117.9 billion kilowatt hours, the official data showed.

Coal output higher in January

China’s coal output jumped 5.5 percent to 0.32 billion tons in January, marking its 11-month high, official data showed Thursday. The output surpassed the monthly peak set up last year by 5.4 percent year-on-year.
Cruise tours sail smooth waters

Passengers snap up tickets for this year’s itineraries as COVID impact seen weakening

By CHEN BOYUAN

China’s cruise tourism market is expected to recover this year, supported by the country’s optimized COVID measures.

For international arrivals, starting Wednesday, Shanghai resumed visa-free entry for overseas cruise tour groups. In addition, in the 15 days after entering the metropolis, vessels carrying the groups will visit other Chinese coastal ports valid for cruise docking and passengers can apply to explore the areas during docking.

For domestic tourists, many domestic travel agencies and cruise line operators reported that all tickets for their cruise itineraries this year have been sold out.

Global cruise tourism demand is also blossoming, said the Cruise Lines International Association (CLIA), the world’s largest trade association in the cruise sector.

According to a recent CLIA survey of 6,200 travelers, 30 percent of respondents who previously had taken a cruise said they intend to take such trips again, while 72 percent of those who have never taken a cruise said they were open to taking one.

China is now second only to the United States in terms of the number of cruise seizures, with a view of the recent massive sales growth, the Chinese cruise market has the potential to become the world’s largest by 2030, according to the China Maritime VOX.

Shunde to shine with smart jewelry center

By QUAN LUN

Construction of an ecological gold, jewelry, and manufacture center featuring intelligent manufacturing in Shunde district of Foshan, Guangdong province, will help introduce more global investors to the district, a local Party official said.

The first phase of the gold and jewelry center, with an investment of over 843 million yuan (12.34 billion US dollars), kicked off construction recently in Shunde. It is also a building of gold and jewelry industrial cluster with a market scale of more than 100 billion yuan.

The project, jointly invested by leading Chinese gold and jewelry companies of KingRoad Group, Shenzhen Lucky Jewelry Industry Co. and Zhon Liu Jewelry Industry Co., will become an intelligent and digital gold and jewelry manufacturing center, the local government said.

Currently, imports of rough diamonds for processing in Shunde account for some 70 percent of the country’s total, according to the local government.

The project, with a construction area of about 21.5 million square meters, will apply cutting-edge technology and smart robots to promote high-quality and high-end automation manufacturing.

“Leveraging digital technologies, the center will also help optimize the entire production chain, upstream raw material supply chain, research and design and smart retailing of gold and jewelry,” said Liu Shuang, party secretary of Shunde District.

The local government has formed a series of preferential policies, including a one-time fund of 20 million yuan each year, to help boost the development of the gold and jewelry industry, Liu said.

Amid a pandemic that has agreed to launch projects in the center, Shunde’s Shunjy Jewelry Co. Ltd said its new office complex advanced technologies and automatic precision manufacturing instruments in its workshop.

“With the workshop in the center it is expected to attract more sales and marketing talents in the gold and jewelry industry of the Guangdong-Hong Kong-Macao Greater Bay Area and help accelerate digitalization and innovation for the entire industry,” said Guo Li, chairman of the company.

In addition, the center will also introduce a number of leading international gold and jewelry brands, luxury hotels, shopping malls, grade-A office buildings and research and educational base institutes, to make it a flagship project integrating the elements of various industries.

Prior to the construction, the local government signed cooperation agreements with 26 financial, testing and research organizations and held gold and jewelry conferences from the GFF.

Clinging the gold and jewelry industry’s rise in generating domestic consumption, Xiang Shuang, a market insider, said the ecological center will greatly boost local economic development.

“Based on its strong digital manufacturing strength, the gold and jewelry industry, which is one of the five strategic pillar industries in Shunde, has the potential to become the world’s leading gold and jewelry manufacturing center,” Xiang said.

A training base providing services such as taking the lead in the workshops of the China Jewelry and Jade Industry Association, “The process of upgrading the gold and jewelry industry is the rapid improvement of digital intelligence, developing talent is particularly important,” Xu said.

I’ll take the lead on this one.

Feel the joy of green transport.

Shunde to showcase some new technologies at the China Internationale High-Tech Exposition, opening in November.
Smart agriculture boosts vitality in Zhejiang

By MA ZHENGANG From Hangzhou

Moore-edge technologies have been deployed in agricultural production and smart farm management, promoting agricultural development and rural modernization in China.

Among the farming families in China, one agricultural family located in Shaoxing city of Zhejiang province has expanded its farmland by deeply integrating modern technology, such as big data, cloud computing, and internet, with traditional agriculture. The level of mechanization for agricultural production in rural areas is all displayed on the screen in Haikou Farm. It presents the variety of farmland cultivation conditions in the vegetable seedling, the total number of the seeds and the planting conditions in various towns, Lin Weihua, head of Haikou Farm.

Lin is an agricultural technician who integrates equipment management and data operations at Haikou Farm.
China's Law-Based Cyberspace Governance in the New Era

The State Council Information Office of the People's Republic of China
March 2023

Editor's Note: China's State Council Information Office released a white paper titled "China's Law-Based Cyberspace Governance in the New Era" on March 23.

Contents
Preface
1. Upholding the Rule of Law in Cyberspace
2. Consolidating the Legal System for Cyberspace Governance
3. Keeping Order in a Rule-Based Cyberspace
4. Defending Rights and Justice in Cyberspace
5. Promoting Public Awareness and Committed Implementation of the Rule of Law
6. Promoting Information Interchange and Cooperation in Law-Based Cyberspace Governance

Conclusion

Preface

The impact of humanity's great achievements, although it facilitates economic and social development, in the same time it poses severe challenges to the whole system of administration and management. In the digital age, what defines a modern country is its legal system, and the rule of law proved to be essential to internet governance. It has become a global consensus to apply law-based thinking and approaches based on the rule of law to the field of cyberspace governance.

China has long been committed to building a modern legal system. The new era of the 14th Five-Year Plan and the long-term vision of 2035, putting the Chinese characteristics into a New Era, has set forth major strategic tasks and goals for the construction of an internet governance system as an essential part of the overall strategy of building socialism with Chinese characteristics.

2. Implementing the National Cybersecurity Law, which is the backbone of the legal system for cyberspace governance.

3. Establishing a national cyberspace governance legal system, ensuring the rule of law and cyberspace governance.

4. Upholding the rule of law in cyberspace.

5. Upholding the Rule of Law in Cyberspace

As the concept of law-based cyberspace governance became widely recognized, China set out to improve its legal system to integrate law-based cyberspace governance into the national overall governance system and to ensure its progress and experience. In the process, it has pioneered the development of digital law, which focuses on the rule of law and digital governance.

1. Establishing a System of Laws for Protecting Rights and Interests in Cyberspace

China has compiled a large number of laws and regulations that protect the rights and interests of internet users. By strengthening the protection of personal information, China has made efforts to protect the rights and interests of internet users. China has made efforts to establish a comprehensive legal system that protects the rights and interests of internet users.

2. Upholding the Rule of Law in Cyberspace

The law is the foundation of a country, and the rule of law is the prerequisite for the modernization of China. China has established the legal system of cyberspace governance, which integrates the construction of cyberspace governance, and has taken the initiative in cyberspace governance. Under the principle of law-based cyberspace governance, China has established a legal system that comprehensively protects the rights and interests of internet users.

3. Implementing the National Cybersecurity Law, which is the backbone of the legal system for cyberspace governance.

4. Establishing a national cyberspace governance legal system, ensuring the rule of law and cyberspace governance.

5. Upholding the rule of law in cyberspace.

6. Protecting the digital rights of Internet users.

To transform from high-speed growth to high-quality development, it is necessary to protect the digital rights of Internet users. China has compiled a large number of laws and regulations that protect the rights and interests of Internet users. By strengthening the protection of personal information, China has made efforts to protect the rights and interests of Internet users. China has made efforts to establish a comprehensive legal system that protects the rights and interests of Internet users.

7. Upholding the rule of law in cyberspace.

8. Protecting the digital rights of Internet users.

To transform from high-speed growth to high-quality development, it is necessary to protect the digital rights of Internet users. China has compiled a large number of laws and regulations that protect the rights and interests of Internet users. By strengthening the protection of personal information, China has made efforts to protect the rights and interests of Internet users. China has made efforts to establish a comprehensive legal system that protects the rights and interests of Internet users.
II. Protecting Personal Information

Protecting personal information is one of the most important tasks for countering digital crime. In 2019, the National Internet Information Administration (NAI), the National People’s Congress Standing Committee, the Ministry of Public Security, the Cyberspace Administration of China, the China Consumer Protection Association, and the Internet Society released a draft Interim Notice on Protection of Online Personal Information. The Interim Notice, which aims to ensure the safety of online personal information, is a legal text that is expected to protect personal information from illegal use.

In the Interim Notice, the Ministry of Public Security points out that online personal information is not only a key part of digital economy development, but also an important factor in safeguarding personal rights and interests. The Interim Notice has been widely welcomed by netizens.

The Interim Notice is expected to ensure the safety of online personal information, which is a key part of digital economy development and an important factor in safeguarding personal rights and interests. The Interim Notice has received widespread support from netizens.

IV. Improving Regulation for Cyber Security

China has become a global cyber power in the new era. As a user and an active participant of the global cyber community, China has strengthened its regulatory framework to protect national sovereignty, national security, and citizens' legal rights and interests.

1. Strengthening Legal Frameworks for Cyber Security

China has promulgated a series of laws, regulations, and policies to strengthen legal frameworks for cyber security. These include the Cybersecurity Law, the Internet Information Administration Law, the Online Network Security Law, the Personal Information Protection Law, and the Data Security Law. These laws and regulations have provided a solid legal foundation for protecting national sovereignty, national security, and citizens' legal rights and interests.

2. Increasing Administrative Measures

China has adopted a series of administrative measures to strengthen cyber security. These include the Regulation on the Security and Protection of Critical Information Infrastructure, the Interim Notice on Protection of Online Personal Information, and the Interim Notice on Protection of Critical Information Infrastructure. These measures have played a key role in ensuring the safety of national sovereignty, national security, and citizens' legal rights and interests.

3. Strengthening International Cooperation

China has strengthened international cooperation in the field of cyber security. China has actively participated in international organizations such as the United Nations Commission on International Trade Law, the International Telecommunication Union, and the World Intellectual Property Organization. China has also signed a series of international agreements and cooperated with other countries to strengthen cyber security.

V. Establishing and Improving Regulatory Mechanisms

China has established and improved regulatory mechanisms to ensure the safety of national sovereignty, national security, and citizens' legal rights and interests. These mechanisms include the Interim Notice on Protection of Online Personal Information, the Interim Notice on Protection of Critical Information Infrastructure, and the Interim Notice on Protection of Online Personal Information. These mechanisms have been widely welcomed by netizens.

The Interim Notice on Protection of Online Personal Information is a legal text that is expected to protect personal information from illegal use. It is expected to ensure the safety of online personal information, which is a key part of digital economy development and an important factor in safeguarding personal rights and interests.

The Interim Notice on Protection of Online Personal Information is a legal text that is expected to protect personal information from illegal use. It is expected to ensure the safety of online personal information, which is a key part of digital economy development and an important factor in safeguarding personal rights and interests.
Exploring new avenues for judicial policy is critical in formulating an effective counter-terrorism strategy. Cybercrime and cyberterrorism are evolving threats that necessitate a proactive approach. Significant improvements in law enforcement and judicial practices are required to address these issues effectively.

2. Publishing Cyber Laws and Regulations

Effective laws and regulations are critical to the public interest in cybercrime. They not only provide legal protection against cybercrime, but they also ensure that individuals and entities are aware of their rights and responsibilities. Regulations must be comprehensive and enforceable, and they should be reviewed and updated regularly to reflect changes in technology and the cyber threat landscape.

3. Building Legal Awareness and Key Groups

Building legal awareness is a crucial step in combating cybercrime. Key groups must be engaged in the process, such as law enforcement agencies, industry representatives, and the general public. This requires education and training on cybercrime prevention and response, as well as the dissemination of information on the latest trends and threats.

4. Increasing International Cooperation and Cybersecurity Governance

Increasing international cooperation and cybersecurity governance is essential in the global context. It requires the establishment of international agreements, frameworks, and mechanisms to address cybercrime and cyberterrorism.

5. Conducting Comprehensive and Effective Cybersecurity Governance

Conducting comprehensive and effective cybersecurity governance involves a multidisciplinary approach that includes legal, technological, and operational components. It requires the development of policies, strategies, and measures to address the cyber threat landscape.

Creating platforms for dialogue is crucial for promoting understanding and cooperation among stakeholders. These platforms can facilitate the exchange of ideas, best practices, and solutions to common challenges.

Conclusion

Building a safer, more secure world requires a multi-stakeholder approach that involves the government, industry, academia, and civil society. Collaboration and dialogue are essential in developing effective strategies to combat cybercrime and cyberterrorism.
COMMENT

Global Civilization Initiative outlines the way to transcend estrangement, clashes and superiority

The modernization of humanity should be like a garden where a handful of flowers bloom in the Fresh Snow homage. The Chinese ancient saying so as to be able to disclose in its keynote speech at the opening ceremony of the 17th International Conference on Global Civilization in China and Russia, with Beher Eng, Secretary General of the Global Civilization Initiative, the 17th Global Civilization Initiative was in China, he said to the world how to live in peace. What is so special about the Global Civilization Initiative? It is that it provides a unique cultural landscape for the progress of mankind, and helps to promote the process of modernization, but also to take the path that is beneficial to the world's national interests and unique features.

It is in the people they are the country that are in the way such that modernization path best suits itself, as modernization cannot force things and conditions, it has to be done in an automatically.

Saying that modernization cannot be realized by four follows the same simple way of the city and part, which is the Global Civilization Initiative, which promotes tolerance, coexistence, exchange and development of the community of a shared future for humanity.

Following the Global Development Initiative and the Global Civilization Initiative, China has put forward a global civilization. The latest initiatives calls for respect for the diversify of civilizations, advocating the common features of humanity, highly valuing the inheritance and innovation of culture, and promoting robust international people-to-people exchanges and cooperation.

Washington’s barfed theft of TikTok

The Committee on Foreign Investment, part of the US Treasury Department, has blocked TikTok’s acquisition of the Chinese-owned social media app by US-based ByteDance, citing national security concerns. TikTok’s response to that information, which will be used for the Social Media Initiative, which targets only the most advanced of China’s social media platforms, is that it will be used for the platform to provide social media services in the United States. TikTok’s statement follows a pattern of the US government, which is taking stronger measures to regulate social media platforms.

Despite TikTok’s listing in more than 100 countries, the US media has already reached its peak. It is not only the Chinese government, but also the American media that is putting a lot of pressure on TikTok to show its support for the US economy. The US has been pushing for TikTok to list on the US stock market to gain more exposure and visibility.

Creating an Anti-China stage for survival

South Dakota Governor Kristi Noem has taken to the US Financial Post on Monday that TikTok is a $200 billion app that will destroy this economy. She says the app’s value and many people have been criticized for their support in this movement. The US is not only the most advanced social media platform, but also the most widely used social media app in the world. The US government has been putting a lot of pressure on TikTok to list on the US stock market to gain more exposure and visibility.

Last year, the US government has put TikTok on the list of dangerous apps and has been putting a lot of pressure on TikTok to remove its content that is deemed to be dangerous. The US government has been putting a lot of pressure on TikTok to list on the US stock market to gain more exposure and visibility.

SBV collapse just one of many, as challenges abound for US

The SBV, a major Vietnamese bank, has announced its collapse due to a $200 billion fraud scheme. The bank has been forced to take action to prevent the fraud from spreading to other countries.

SBV collapse, as one of the biggest banks in Southeast Asia, has severely affected the country’s financial system and has been hit by a series of economic issues. The recent events have highlighted the country’s financial vulnerabilities and the need for stronger regulations.

What They Say

Practical promoter of peace in Middle East

The surprise announcement by the SA and China that they have reached an agreement to resume diplomatic relations after 46 years of stunned media relations in the Middle East took place on Friday. The announcement is seen as a significant development in the Middle East, which has been marked by tension and conflict for decades.

The announcement comes as a major breakthrough in the Middle East peace process, after years of strained relations between the two countries. The agreement is seen as a positive step towards resolving long-standing conflicts in the region.

The surprise announcement comes as a major breakthrough in the Middle East peace process, after years of strained relations between the two countries. The agreement is seen as a positive step towards resolving long-standing conflicts in the region.

The surprise announcement comes as a major breakthrough in the Middle East peace process, after years of strained relations between the two countries. The agreement is seen as a positive step towards resolving long-standing conflicts in the region.

Yet the robust development of China’s relations with almost all states in the region over the past decade, along with the strong benefactor local people have enjoyed benefits from, has paved the way for a new era of Sino-US relations. This is particularly evident in the emerging Sino-US partnership, which has laid the groundwork for a new era of peace and cooperation in the region.

According to a recent report by the US-China Business Council, China has become the second-largest market for US exports, outpacing the European Union and Japan. This is a significant milestone in the Sino-US partnership, which has been marked by tension and conflict for decades.

The surprise announcement comes as a major breakthrough in the Middle East peace process, after years of strained relations between the two countries. The agreement is seen as a positive step towards resolving long-standing conflicts in the region.
China's economic rebound will help pull the ASEAN members through the storm of uncertainties

**PEKING OPERA’S LEADING VOICE**

Director and star of the traditional genre passes on tips to bring in a new generation, Zhang Xiaomin reports in Daian, Liaoning.

"The key to the prosperity of Peking Opera lies in people. It needs to be further created and promoted. Otherwise, such problems are only superficial and will be left in its development," he says.

He had heard that, in order to attract more young actors to other traditional open-tops are during performance, while others work as an actor after. "Under those circumstances, it is impossible for young people to put more energy into it, and the problem becomes even worse that there will be no followers," he says.

The communication with many art groups and youth actors and conducted in-depth research and on-site training.

This year’s annual sessions of the National People’s Congress and the National Committee of the Chinese People’s Political Consultative Conference, Yang said, "We need more professionals to pass on the tradition of Peking Opera to the younger generation."
One of the prominent Chinese artists of the contemporary scene, Zhang Xiaogang is presenting his first solo exhibition in Shanghai. Zhang Xiaogang: Magpies, from March 18 to May 5 at the Long Museum West Exhibits, marks the first public solo show of his career in the past three years. 

While Zhang’s paintings have continuously been well-received in the art market, Zhang says the auction price no longer means anything to him, because the paintings that are circulating in the market were created more than 10 years ago. He has never sold his works, "At first I felt lonely and exiled, but then the years passed and the value of the market, you would imagine the peace of your mind, and go on with your work," he says. "You won’t possibly turn back to do more big portrait paintings just because the art market venerated them.

"No one is always looking for the future. What matters is your work, and how we keep going forward."

"Artists alone are always advancing," he adds.

"The latter part of my life, the days and nights are focused on the process of art creation."

The series of paintings is the "comic strip" that recorded my feeling and thought about a lot of things," Zhang said at the exhibition’s press conference. "I want to paint it on paper in 2009, when preparing for a solo exhibition in New York. As a creative medium, paper makes his work intimate and accessible. Also, as he says, paper is versatile, you can put his painting in a watercolor and shape it into one knocks. He plays the trumpet,桑, and plays the trumpet, I want to present the story of all the characters, and highlights the color of a box and the character of paper," he adds. "For example, you might see the character Christine Laidle as the independent woman Nora could have become, and notice the difficult situation she is in and the chaos she endures."
**Modern tech can shrink our ability to unplug**

Technology is always something that has intrigued me, so I was intrigued when I read an article by Szu Su about how people are using TV screens to work, and I started wondering, if they could have done the same thing in the past? If they had, might the same things happen today? I wrote an essay to explore the potential implications of this phenomenon.

---

**In the end, I can only conclude that technology has allowed us to connect with the past, and that we should take advantage of it to learn from the experiences of the past.**

---

**Visitors flock to Hainan’s first Dongpo festival**

KĀHOU – As rains fell, a festive atmosphere filled the air at the Hainan Cultural Heritage Park, welcoming an influx of residents and tourists alike to enjoy the sights and sounds of the Dongpo festival. The park was abuzz with activity, and the poetry recitation of Su Shi masterpiece, a favorite of the festival, added to the festive atmosphere.

---

**The duxiangu is not only an essential element of the Jing ethnic group’s artistic identity, but can also be used to build a cultural bridge between people, report Chen Nan and Shi Rupeng in Nanning.**

---

**I am captivated by the sounds of the musical instrument. It’s amazing that one string can produce such a wide range of melodies.**

---

**What I see in these poems is not only the food, but also Su’s open-mindedness and heroic attitude toward life in the face of difficulties and adversity.**

---

**Life**
