Special envoys helping boost hopes for peace

President’s blueprint promotes mediation efforts, dialogue to solve problems worldwide

BY ZHANG YUNHE A Brussels

In light of China’s recent mediation successes in getting Saudi Arabia and Iran to sit down to the long-heralded dialog and try to reconcile their diplomatic disputes on Feb. 22, many policy observers have pointed to the extensive peacemaking efforts made by Chinese diplomats—already more successful than their Western counterparts—over the globe.

March, for example, watched packed schedules and traveled across China by envoys representing the Chinese government and its Ministry of Foreign Affairs who focused on specific regions or laws, such as the Middle East and Iran, respectively.

They made stops in destinations such as the Korean Peninsula, East Asia, the Middle East, North Africa, and the South China Sea, where local issues as the need to galvanize local stakeholders, progress on the regional or global agenda.

In the case of the Middle East developments, Zhai Jun, the Chinese government’s official envoy to the Middle East, wrote in a recent article that the Middle East is Beijing’s key step in improving foreign relations with foreign countries, because the Middle East is Beijing’s long-term blueprint for peace. This blueprint, which was proposed by President Xi Jinping in 2018, is seen as its goal for the next five years, officials and experts said.

Recently, the Middle East posted sporadic crises and efforts to ease those conflicts with world leaders, including China, to carry out the Global Security Initiative and build a harmonious international community for sustainable development.

Tensions across the globe have increased following the Taiwan President Tsai Ing-wen’s recent trip to the United States, and the China’s response has been constructive in nature,

Many European countries have expressed concern about China’s recent actions, and some have called for increased dialogue and efforts to resolve these conflicts.

Zhai said that in the current situation, Beijing is staunchly pursuing the Global Security Initiative and building a harmonious international community for sustainable development. It is clear that the Global Security Initiative has a comprehensive and all-sided nature, and it will make contributions to the establishment of a stable and equitable international order.

In an interview with separate aligned to the Global Security Initiative, Zhai said, “If we want to build a stable and equitable international order, we must work together to promote the Global Security Initiative.”

In the current situation, Beijing is preparing to carry out the Global Security Initiative and to make contributions to the establishment of a stable and equitable international order.

The Global Security Initiative can help to identify the root causes of international conflicts and to promote dialogue and cooperation among countries, thereby reducing the risks of conflicts and promoting international peace and security.

President Macron is on a trip to the US, aiming to promote cooperation and reduce the dependence on US technology.

On March 1, two major developments will take place:

1. The E17 Global Cooperation Initiative will be underway.
2. The French National Defense Council will be held.

Speaking at the E17 Global Cooperation Initiative in Paris, Macron said, “The US is facing a major strategic challenge today, and it is crucial to reduce the dependence of European countries on the US.”

Macron added: “We are facing a global strategic crisis, and we must reduce our dependence on the US to protect our own interests.”

Macron said, “I believe that Europe should reduce its dependence on the US and start to become more independent.”

**Initiative offers path to shared prosperity**

On the eve of the 10th anniversary of the Belt and Road Initiative, President Xi Jinping signed the Belt and Road Initiative Declaration, which is signed by more than 30 countries and organizations.

The Belt and Road Initiative is a global proposal to promote economic and social development among countries and regions.

In 1992, China gradually opened up to consumer and privatized growth, Xiajiang Qiaoxi Miao Village, which roughly translates as "Miao village with 3,000 households," was designated a scenic spot by the provincial government for its intriguing views.

From above, the village is home to a maze of bamboo houses opened among rolling terraced rice fields and fish ponds. As eight hills, tens of thousands of light bulbs gleaming white and yellow from the Mostar homes transform the ancient hamlet into a kind of fairyland. Some villagers have even compared the village with those depicted by Japanese director Miyazaki in his 2001 animation film Spirited Away.

Various immune systems in local culture by taking part in festivities in which villagers dressed in traditional clothing parade on the streets and standards play by the roadside.

In 1995, Li established the formidable tourism attractiveness of the village.

Li, studied, has observed, has hand, has hand, has hand, "Miao’s unique cultural system: second life in modern times and also small town culture to travel further" he said.

Competitive edge

This village is a competitive edge amid increased rural tourism, which has been pursued by the authorities since 2015 to end some of the most neglected rural provinces. The institute researched and documented the village, which reflects the traditional culture of the Miao people, as their folk songs, Li said those things provided the basis for developing emotional tourism and cultural tourism.

As one of the main attractions was inspired by the Miao village of the mountains, Li suggested that the tradition be developed to local residents wonderful scenery.

According to Li, only what lacks those things of rice wine — each cup representing one of the brave villagers for victory, such as bowling more attractive — would remain the charm of the village.

"This is the need to find those traditions that resonate with modern-day villages, and to simply get rid of everything that isn’t," Li turns traveler often hear by some tourists are becoming simply commoditized, Li said they should be integrated with localization.

"They have humanization," he said, referring to simply replacing commoditized tourists in "local" to depict on local culture and a national distinctive resources.

Hunt poverty has been endured in China as a new journey to shake the countryside.

In November, a village guideline published by the Communist Party of China Central Committee and the State Council stated that construction projects, such as renovating rural houses and upgrading dinning roads, are being planned to narrow rural infrastructural. Hunt poverty featured during the Spring festival against poverty is also likely to see further growth, experts said.

With such work underway, Professor Li Guangqi emphasized that after they are renovated, rural villas' attractiveness and local culture will also be increased.

On March 11, as a news conference to mark the close of this year’s National People’s Congress, he said, "China has a vast country with cultures and customs that vary from village to village, even though they may be just a few miles apart."

Li took as his first public appearance since being appointed premier just two days earlier to stress that rural development is not only about economic growth. It is also important to highlight the environmental context, ecological, social and cultural values, preserving

In 2016, he traveled with a group of villagers from Beijing to Yunnan, which translates as "Fownd Village," in Yunnan province. This picture offers the community a glimpse of the cultural landscape, historically intended to be a field study of the poverty-stricken community staged over just a few months, the rural community with the village located several years. By the time it ended in 2017, the tour had helped to transform the local economy in the most complete with local hands, 4G internet access and nights.

"Using the poverty relief fund, the village was rebuilt based on its original architectural and the traditional lifestyles of the locals were preserved," Li said.

The renovation work, which included adding toilets and air-conditioning, helped make the village a more welcoming place for farmers to return to.

In 2018, he traveled with a group of children from Beijing to Yunnan, which translates as "Wendou Village,

Residents of Xijiang village, Shuixian county, Xizang, attend a dance festival in November. HAN YUN SUHAI / FOR CHINA DAILY

VILLAGES: TOURISM EXPECTED TO GROW

In recent years, the Chinese government has promoted rural revitalization and especially rural tourism. The vast majority of rural houses are now as cable TV boxes and Internet services.

However, these two or three-storied traditional houses blend softly with their surroundings.

These properties unexpectedly create a lovely visual effect, and surging outside these houses is a roiling and pleasant experience," he said.

Alors du Milan I helped inspire the village to attract first-time tourists. While the village, a school developed hamlet in Longyang, Zhangye region, and a popular hotspot by young people. Huang Yong, which translates as "grandpa," the property was filled with adorably little kids from his grandfather’s home.

"The two-way structure—thewall floor is used as store goals— is more than 300 years old, but time and lack of repair had not taken their charm on the rough-looking walls.

Like many villages in China, Pingyang village has largely been dwarfed by its residents, with just a few senior remaining. Stained halfway up a stage, the village is surrounded by mountains.

In avoiding interfering with the farmhouses ‘humanization solutions’ with its surroundings, Li and his colleagues decided to preserve the scenic while making significant changes to the interior. The aim was to provide a place of rest for tourists — mostly young people — and offer a temperature for those visiting for — mostly young people — and offer a temperature for him.

The modern interior contains many of Li’s works, such as billboard designs. This project splits over several months, with Li’s taking a strong psychological stance against the local, or the local, in achieving his contemporary and urban vision. For those living in China, the project has been simply. We have seen local culture that has been destroyed, Li said.

The primary function of Li’s house to provide homes for farmers’ families.

Villagers also need to provide jobs, and the integrated development of tourism, entertainment and the service sector represent an important factor in the ultimate rise to urbanization, he said.

As he does not believe in relying onto single source of income, Li said to set an entertainment center in Beijing to help set local farm products, including eggs and puddings.

"Tourism is not the only solution for rural villages," he said.

Traditional food

Beijing’s famous "beijing" has been a rapid urbanization drive that encompasses efficiency and more modern aspects of city life. In a certain degree, the process has ended rural culture and led to the formation of multiple homes to make way for more homes andanko picturesque, a sea of many villagers are thousands of kilometers away.

Urbanization has brought many rural traditions and a huge number of cities should be wary of rural areas being encroached by urbanization.

China's top political advisor Wang Hong called on Monday for a competition on both sides of the Taiwan Straits to join hands with the three hearts to promote external interface and separation, active actions aimed at "unity and convergence", inspiring the need for a comprehensive realization of the" across-the-Straits and real peace.

Wang, a member of the Standing Committee of the Political Bureau of the Communist Party of China, made remarks when he met in Beijing with Lai Chiu Chao, president of the Taiwan-based council of the national federation of entrepreneurs across the Taiwan Straits.

He said that the motherland will always show respect and care about the progress and development of Taiwan, since they will not be joined in common intentions and shared purposes, but also able to stay closer to the local communities and achieve more developments.

As China modernization continues on all fronts, attracting cross-Straits exchanges and cooperation will help enhance the well-being of compatriots on both sides and aftereffects between compartments and development and economic strength.

Wang said that the cross-Straits peace and stability are as necessary as water and fire, he said.

It is key to increase the role of the reunification, deepen and broaden the traditional relations and promote integration developed as a family, five hearts, which will contribute to the development of compatriots on both sides of the Straits and the entirety of China.

The summit for entrepreneurs across the Taiwan Straits, established in 2002, is one of the most important platforms for people of Chinese origin and communities exchanges and cooperation.

Last year, the summit was held in Xiamen, a coastal city in Fujian province.

The third China International Consumer Products Expo, which started in the southern port city of Haikou on Monday and runs through April 12, is expected to help increase the country’s prominence and product image and boost a global to international trade features of Beijing and the world economy, officials and company executives said.

China’s pace of upgrading consumption has accelerated, and both traditional and emerging consumption sectors have witnessed growth. Consumption has become a driving force to strengthen the country’s fundamental roles of helping boost economic recovery, Vice-Premier Liu He said via video link during the opening ceremony of the expo, which was held in Haikou.

This year, the expo has attracted the participation of more than 3,500 brands from home and abroad, with 300,000 products on display, which are expected to make up their delectable varieties. Minister of Commerce Wang Wei said the expo will help strengthen the consumption power of brands and buyers, stimulate vitality, drive high-quality development, and promote consumption upgrade.

The 2023 expo will also feature hot topics such as green, healthy, fashion, technology and digital consumption, and will host a series of activities including fashion shows and events of Wang said.

"An economic forum shows a positive picture, offering new growth opportunities for global consumers, especially for international consumer product brands," said Shi Jing, deputy director of International Trade and Economic Cooperation Centre.

Industry participants said the expo would be an important stage to help promote the building of China’s tourism consumption center and a market platform for high-quality consumption.

To benefit from the favorable political environment and free trade port, Fixed Period — the world’s second-largest trade center of wines and spirits — has opened four new duty-free stores in the idiom.

"We will continue to deeply explore China’s vast market of imports, enhance the enthusiasm and operational opportunities by doing so on the principle of open market," Shi said.

We expect to provide Chinese consumers with more prominent and accurate experiences, and inject new blood into the thriving Chinese market," said Jerome Coutte-Bonne, managing director of Promec Rival China.

China’s consumer market is second only to that of the one in the United States. In 2023, China imported consumer goods worth more than 1.6 trillion yuan ($235 billion), up 25.4 percent compared with 2022, according to the Ministry of Commerce.

During the opening ceremony, Italian Prime Minister Giorgia Meloni said via video link that Italy considered it a great honor to be the country of honor at the expo. The Italian delegation is participating in the expo (year) with some 100 brands. Meloni said that to thanks to the expo, Italian products are anticipated to get more recognition from China consumers and also globally.

Japanese cosmetics company Shiseido Group, a third-party exhibitor at the expo, said that China’s market scale and consumption power is on track to become the world’s largest, and the country has become a source of driving force of global innovation.

Participating in the expo has given greater confidence in the smooth development of the Chinese market, said the country’s business minister, said Yu Li, head of corporate communication and media department of the expo.

The expo is also expected to help promote China’s economic development and the country’s international trade and economic cooperation.

The attractiveness of China’s economy and sophistication of Chinese consumers can help drive China’s market scale and consumption power to become the world’s largest, said Zhang Wei, deputy director of the expo.

Indonesia is the third largest market in the world, and Indonesia is expected to play a critical role in China’s consumption center and a market platform for high-quality consumption.

"The expo will be a great stage to promote international trade and economic cooperation and a platform to display China’s strengths and opportunities," said Chen Zengwen, director of the expo.

The expo will also be an important stage to help promote the building of China’s tourism consumption center and a market platform for high-quality consumption.

First view: glimpse into visioned mediation efforts

By ZHAO YONG

School sees graduate numbers soar

Even though he graduated five years ago, Yang Xiaoyang is still a hot topic for many students as his old high school in Zhenxiong County, Yunnan Province.

That's because he was the first student ever to graduate from the village school, and his classmates have never been more proud of their alma mater.

The school is located in Mangbu, a small town surrounded by rice paddies, with only about 3,000 people living in the area.

At the end of 2009, Zhenxiong was one of the last counties in China to eradicate poverty, and its reputation as a county with low-quality education and a low level of development.

However, in 2019, 77 percent of the 1,485 high school graduates from Mangbu Secondary School entered universities, with 31 gaining admission to prestigious universities.

Wang, 21, who secured first place out of a possible 590 in the national college entrance exams, or gaokao, spent all five years at primary and secondary school in Mangbu.

His parents left home years ago to find work in larger cities, so his grandparents cared for him.

"I am so proud of my grandson — perhaps that's because I have helped my family with farm work since childhood, so I know that studying in school is easier than working to fill the fields," he said.

The school day starts at 8 am and ends at 10 pm. It is strict, repeated, and is not easy in the long run, but some students can run up to 80 miles a week in about 30 seconds.

Wang said that despite the grueling schedule, he chose to focus on the difficulty in order to improve.

"For example, I could see the outside in the minutes before the morning reading session and enjoy the beautiful natural scenery during the evening study period," Shang said.

Sometimes, the days are filled with the sound of teaching books being stacked, I could still hear their voices. According to China Magazines, Wang is a winner of a scholarship worth 1 million yuan ($160,000) by the Ministry of Education for outstanding achievement in Peking University.

The school also held a banquet banquet to celebrate Wang's achievement.

Wang's story inspired many people for being able to enroll at Peking University, away from home, always reminding him of his family and friends, and his grandfather was also deeply moved by the boy's story.

Moreover, teachers at Mangbu Secondary School have, like Wang's own story, told their children's stories, and their students' stories, and the school's transformation.

"Being a teachers' school, it is meant for the children of farmers and those from underprivileged backgrounds, and it has enabled such children to receive a quality education not found in their hometowns," Yang said.

Wang's daughter did not perform well in the high school entrance exams, but she did well in the national college entrance exam, and got admission to her beloved university.

The school itself is a big change in education, and it has enabled such students to have a better education, he said.

"The success of the school means local farmers must know how to save money by sending their children to a good educational facility to continue their education," Yang added.

According to government policies, the school offers scholarships to students, along with generous scholarships for those who do not graduate high school, 400 yuan for each student, and 400 yuan for each family, and the school has been recognized for its education, Wang said.

"Mangbu Secondary School has long been considered to be a poor and backward school," Yang said.

"We have seen the changes in the school through the years, and I am proud of my grandchildren's achievements," he added.

Yang's family chose to enroll in the school and has seen the improvements in the school.

"The school's success is the result of Zhenxiong's continuous investment in education and the support it attaches to education, especially in the low-income areas," he said.

Mangbu Secondary School's success has brought renown to Zhenxiong, a county that was once mired in poverty.

Zhou Shou, a journalist, said in an interview with Li Yingzuo in Kunming.

Parents praise teachers, new facilities, and awards

By ZOU SHOU and LI YINGZEU

Parents of Mangbu Secondary School are grateful to the school for helping improve their children's lives.

Vang Zhaoyu, head of Vang Family, a family of 12 students, chose to enroll their daughter in Minyao University.

"The school has made us believe that our children can be admitted to universities, and we are very grateful to the school," Vang said.

"The school's success is the result of the government's continuous investment in education and the support it attaches to education, especially in the low-income areas," he said.

"The students' parents feel a sense of achievement and know that the better-educated their children are, the better opportunities they have in the future," Vang added.

Yunnan's Lonely Orchid King is Self-Taught Expert

Malipo county's new tourist attraction proves to be an outpouring of poverty for resourceful guider turned businessman

By CHEN LANJING in Malipo, Yunnan provincial government

For the past 20 years, one man has helped bohun county (county) identify new orchid species, and in recognition of his efforts, a new species was named after him.

The 52-year-old Guo Xiling, a plant hunter, headover, orchid enthusiast, and former expedition guide, has been a key figure in the discovery of new orchid species for over two decades. His work has been instrumental in identifying and preserving various species of orchids, which are considered among the most beautiful and exotic flowers in the world.

Guo Xiling's passion for orchids began in 2004 when he was invited to participate in an expedition to a remote area in the province. Ever since then, he has devoted himself to the discovery and conservation of orchid species, which are often found in remote and inaccessible areas.

In 2013, Guo Xiling founded the Malipo Orchid Research Institute, which has since become a center for the study and conservation of orchid species.

The institute has conducted extensive research on orchid species, and its findings have been published in various scientific journals and books.

Guo Xiling's dedication to the conservation of orchid species has not only contributed to the scientific understanding of these plants but has also helped to raise awareness among the local community about the importance of preserving these natural treasures.

The institute's work has been recognized by various authorities, and Guo Xiling has been awarded several distinctions for his contributions to orchid research and conservation.

Fascination, not fame keeps Guo's love of plants alive

By CHEN LANJING

A man plied a business to sell wildflowers in southeastern China, but his passion for conservation has driven him to dedicate his life to the preservation of orchid species.

With the help of his brother, Guo Xiling, a former professor at the University of Georgia, Guo has been able to establish a foundation for the conservation of orchid species. His passion for these beautiful flowers has not only allowed him to earn a living but has also helped to raise awareness about the importance of preserving these natural beauties.

Guo Xiling's work has been recognized by various authorities, and he has been awarded several distinctions for his contributions to orchid research and conservation.

**Saudi-Houthi talks spark Yemeni hopes**

Diplomatic moves to end the conflict in Yemen are moving faster after Saudi Arabia and managed to resume direct talks. This is a significant step in the conflict and the talks have shown promise.

**Possible signals**

Yemeni Foreign Minister Abdul Malih Al-Mashat said that there were several positive signals that a ceasefire deal could be announced, with several other countries echoing the general sentiment.

**As tigers thrive, India’s indigenous demand rights**

**BENGALEURU, India** — It was a celebratory atmosphere for officials gathered here for the launch of India’s first tiger reserve in the southern state of Karnataka. The Prime Minister, Narendra Modi, announced that the tiger reserve is a significant step in India’s conservation efforts.

**Violence on rise over abortion issue in US**

By MAY 2001 in Boston:

Since the Supreme Court’s Roe v. Wade decision in 1973, the number of abortion clinics has been on the rise in the US. The 1973 decision made abortion legal in the US, and since then, the number of abortion clinics has been steadily increasing. However, the number of abortions performed each year has been declining.

** collapse of peace talks with the Houthis, Saudi Arabia has been trying to find a way to resolve the conflict in Yemen. The Houthis have been fighting against the government of Yemen for years, and the conflict has led to widespread suffering and displacement of people.**
Emotions raw in California at justice rally for boy fatally shot in car seat

By CHANG-JUN

Hundreds of community members rallied outside the Alameda County Courthouse to seek justice for Jassep Wu, a 2-month-old boy who was fatally shot in his car seat during a freeway shooting in March.

Rally organizers, including the family of Jassep’s mother, said Wu’s death was a reminder of the importance of gun violence prevention.

Mourners held signs with messages of support for the family and called for an end to gun violence.

“Every day, gun violence is a real and present danger,” said the mother of Jassep’s mother. “We must work together to make sure this never happens again.”

Rally organizers also called for increased funding for mental health services and gun violence prevention programs.

“Around the country, we are seeing a growing crisis in gun violence,” said a member of the Alameda County headquarters. “We must support initiatives that can help prevent tragedies like this.”

At the rally, a moment of silence was observed for Jassep Wu and his family. His family members spoke about their loss and the impact of gun violence.

“We have to do more to address gun violence,” said Jassep’s mother. “Our community has experienced too much pain.”

A candlelight vigil was also held in honor of Jassep Wu and his family.

**IPO System Reaches Big Milestone**

Trading in 10 main board stocks shows high-quality development of market

By Ailang YANG

The highly anticipated market-wide implementation of the registration-based IPO mechanism got off to a successful start on Monday as the first 10 main board companies to list under this mechanism started trading.

Under the new mechanism, no price fluctuation limit is set for the first five minutes of trading. The ten companies represented an average market value of over 120 billion yuan (18.5 billion dollars), with electronic component manufacturer Zhejiang Huayuan Automotive Parts Co as the leader, valued at 312 billion yuan.

During the listing ceremony held simultaneously in Beijing, Shanghai and Shenzhen, Guangdong provincial governor Ma Guowei, chairman of the China Securities Regulatory Commission and chairman of the country’s top securities watchdog, said the IPO market had entered a new phase, underlining information disclosure, market supervision, price setting, and the function of the market, fostering progress to market-oriented IPOs.

The mechanism has already helped market-wide IPOs achieve better results in the real economy and provided a solid foundation for further improvement. The structure and composition of the Chinese capital market will be significantly enhanced, with a market reformed for new companies.

The registration-based IPO mechanism was established to promote the healthy market development on the Shanghai Stock Exchange.

In March, there were 1,005 daily transactions, compared with 1,235 per day in the previous month, showing a marked increase (26.7 percent) in short-term IPO transactions.

Civil aviation sector maintains growth

In March, China’s civil aviation passenger transport market volume increased by 18.9 percent year on year, reaching 0.59 billion passenger trips, and the aviation sector has maintained steady growth.

As a result, China’s economy has gradually recovered, and the aviation sector has maintained its steady growth, with the aviation market volume increasing year on year for seven consecutive years, with an average annual growth rate of 27 percent.

The aviation sector is a key industry in the national economy, playing a significant role in fostering economic growth and promoting the high-quality development of the country.

Civil aviation plays an important role in promoting economic development, improving transportation efficiency, and reducing carbon emissions. The sector is expected to become a major contributor to China’s economic growth in the coming years.

A noticeable trend is the increasing importance of civil aviation in the global economy, with China taking a leading role in promoting civil aviation development.

Civil aviation is a significant pillar of China’s national economy, with the aviation sector’s contribution to China’s GDP expected to continue to increase in the coming years.

In addition, civil aviation is a key factor in China’s economic development, with the sector expected to play a crucial role in promoting the country’s economic growth and competitiveness.

Economic and technical development

The Chinese economy is expected to continue growing at a steady pace, driven by strong domestic demand and a improving external environment.

China’s economy is expected to grow by 5.1 percent in 2023, according to the National Bureau of Statistics.

China is expected to continue receiving strong investments from both domestic and foreign companies, with a focus on key sectors such as technology, manufacturing, and infrastructure.

In addition, China is expected to see a further strengthening of its position as a global leader in technology and innovation, with significant investments in research and development.

Economic and social progress

The Chinese economy is expected to continue making significant progress in terms of economic and social development.

In terms of economic growth, China is expected to see continued strength in industrial production and real estate investment, with continued robust growth in consumer spending and exports.

In terms of economic structure, China is expected to see a further shift towards a more consumption-driven economy, with increased spending on services and leisure activities.

In terms of social development, China is expected to continue making significant progress in areas such as education, healthcare, and poverty reduction.

Economic and environmental progress

China’s economy is expected to continue making significant progress in terms of environmental sustainability.

In terms of pollution reduction, China is expected to see continued progress in reducing air and water pollution, with a focus on improving air quality and addressing water shortages.

In terms of resource efficiency, China is expected to continue making significant progress in improving energy efficiency and reducing waste generation.

In terms of environmental protection, China is expected to continue making significant progress in protecting its natural resources and improving the quality of its environment.

In terms of climate change, China is expected to continue making significant progress in reducing its greenhouse gas emissions and addressing climate change.

Joy game is on for toy, gift makers in Shantou

Shantou: China's toy and gift industry has seen steady growth during the past few years, with sales exceeding 1 trillion yuan ($158.6 billion) in 2021. The industry is expected to continue its upward trend, especially during the holiday season. The annual China Toy and Gift Expo, scheduled for later this year, is expected to attract more buyers and participants than ever before.

A recent survey conducted by media platform Visual showed that 70% of respondents were willing to spend more money on toys and gifts for the upcoming holiday season. The report also noted that the toy and gift industry has been one of the few sectors that have maintained steady growth throughout the COVID-19 pandemic.

The toy and gift industry is expected to witness a surge in demand during the upcoming holiday season, with companies preparing to meet the increased demand. The industry is also expected to see a trend towards more innovative and environmentally friendly products.

The China Toy and Gift Expo, scheduled for April 2023, is expected to attract more buyers and participants than ever before. The expo will showcase the latest products and innovations in the toy and gift industry, providing opportunities for buyers and sellers to connect and establish new business relationships.

The expo is expected to attract more than 200,000 visitors from around the world, with a focus on international trade. The expo will feature a variety of product categories, including toys, games, and gift items, as well as services such as design, production, and distribution.

The expo is also expected to feature a range of seminars and workshops, providing valuable insights and knowledge for industry professionals. The expo will be held at the China International Exhibition Center, located in Beijing, and is expected to attract buyers and sellers from around the world.

The toy and gift industry is expected to continue its growth, driven by the increasing demand for innovative and high-quality products. The industry is also expected to see a trend towards more sustainable and environmentally friendly products, as consumers become more conscious of the impact of their purchases on the environment.

The China Toy and Gift Expo is expected to feature a variety of products and services, including toys, games, gift items, and related services, as well as a range of seminars and workshops. The expo is expected to attract more than 200,000 visitors from around the world, providing opportunities for buyers and sellers to connect and establish new business relationships.

The expo is scheduled to take place from April 20 to April 23, 2023, at the China International Exhibition Center, located in Beijing. The expo is expected to feature a variety of products and services, including toys, games, gift items, and related services, as well as a range of seminars and workshops. The expo is expected to attract more than 200,000 visitors from around the world, providing opportunities for buyers and sellers to connect and establish new business relationships.

China's dynamic economy pivotal to regional growth, integration

Momentum seen after nation optimizes pandemic prevention, control measures

{{Received by NSD/FARA Registration Unit 04/17/2023 2:19:07 PM}}

China has played and will continue to play a vital role in promoting free trade, multilateralism and globalization, which are essential to building a just, equitable, open and inclusive world.

**BusinessFocus**

China is home to two of the world's leading trade agreements: the Regional Comprehensive Economic Partnership, or RCEP, as well as the CPTPP. Both are important benchmarks for other regions seeking to consolidate economic integration.

China's dynamic economy is recognized as a key driver of global growth. It is often seen as the "engine of the world economy," contributing significantly to the global economy's recovery.

China is a major player in the global trade landscape and is known for its large and growing market. It is also a major investor, particularly in infrastructure projects.

China's GDP growth is seen as a key indicator of global economic health. When China grows, so does the world economy. This is particularly true in Asia, where China is a major trading partner.

China is also recognized for its commitment to multilateralism and globalization. It is a strong advocate for the World Trade Organization and has been an active member of the International Monetary Fund and the World Bank.

China's Belt and Road Initiative (BRI) is another example of its commitment to multilateralism. The BRI is a ambitious infrastructure development project that aims to connect China with the rest of the world through a network of roads, railways, and ports.

China's role in the global economy is seen as crucial. It is often described as an "economic superpower," and its influence is felt around the world.

China's commitment to the environment is also recognized. It is a strong advocate for the Paris Agreement and has been a leader in the global fight against climate change.

China is a major contributor to the global economy, and its role will continue to be significant in the years to come.
US involvement in Ukraine conflict odious

A small number of Pentagon documents on doctrine and military conflict, including some marked “top secret,” alleged China’s involvement in protecting Russian interests and providing intelligence to Russia. The developments that have appeared on social media offer evidence that China’s involvement in the conflict is not only deeply involved in the Ukraine crisis but also its intelligence community is conducting extensive surveillance and sandbagging of its own allies, is something hard to believe.

That the Chinese government has adopted a foreign policy that it closer to its Western neighbors, and distanced itself from its Asian neighbor, China. The latest leaks from the US intelligence agencies suggest that the Chinese government is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the status quo, and is more willing to use its influence in the region to maintain the...

China and Brazil write a new chapter of partnership

That a 210-member business delegation is accompanying visiting Brazilian President Luiz Inácio Lula da Silva on his upcoming official visit to China is significant. This will be a milestone in China-Brazil relations. The very fact that Lula was re-elected to a third term in Brazil augments the strategic partnership between China and Brazil.

In recent years, China and Brazil have strengthened bilateral relations during his presidency. The two have signed 20 agreements from 2005 to 2018. In fact, China-Brazil relations have advanced from a political partnership to a comprehensive strategic partnership. China is the largest trading partner of Brazil and Brazil is the third largest trading partner of China. In addition, dozens of high-level meetings have been held between the two sides to strengthen BRICS (BRICS is grouping of Brazil, Russia, India, China, and South Africa).

The world, including many large developing countries, has underscored the need for BRICS to be more effective. The BRICS have been active during such as the COVID-19 pandemic and the Russia-Ukraine conflict, which have also big impact on the world order.

As such, the strategic need for a stronger China-Brazil relationship has increased. President Xi Jinping attached great importance to the development of the China-Brazil comprehensive strategic partnership in the cooperative measures to be taken at the two leaders’ level. This, in turn, has been a major enterprise of Lula da Silva.

Economic cooperation between the two sides has made considerable strides. The production capacity and trade balance (met) despite the devastating impact of the pandemic on the world economy. For example, Brazil’s total bilateral trade of 1.3 billion dollars in 2022 and made a historic high of 1.5 billion dollars in 2023.

Now, Brazil-China cooperation has expanded from traditional areas such as agriculture, animal husbandry, energy and infrastructure to new areas such as innovations in the field of science and technology, the digital economy and green energy. Brazil is China’s second-largest trading partner in Latin America, and the third largest export market and investment destination for Chinese firms. Brazil has even issued the second “golden shoes” of cooperation with influences beyond the two countries. BRICS has also added a constructive role in the growth of the global economy and helped improve the global governance system and make international relations more democratic.

China’s plan to open up new opportunities for the world economy, while Brazil is the global leader in the fields of science and technology, the digital economy and green energy. Brazil is China’s second-largest trading partner in Latin America, and the third largest export market and investment destination for Chinese firms. Brazil has even issued the second “golden shoes” of cooperation with influences beyond the two countries. BRICS has also added a constructive role in the growth of the global economy and helped improve the global governance system and make international relations more democratic.

Greener road to the future

Lessons from China’s overseas coal exit for better environmental cooperation for the next 10 years of the BRI

The reductions of environmental risks, such as climate change, biodiversity loss, air pollution, and health issues, are a challenge to the world. The challenge cannot be overcome without cooperation. China, which is the world’s largest emitter of greenhouse gases, is playing an increasingly vital role in reducing global emissions of carbon dioxide and other gases contributing to climate change. China’s potential for green development and environmental cooperation has grown at the same time as Beijing’s recognition as the biggest emitter of greenhouse gases.

China achieved an important global milestone in September 2021 when President Xi Jinping announced that China will stop building new coal-fired power plants abroad. As China continues to support domestic coal plants and hopes to peak domestic emissions before 2030, its overseas coal exit decision was not only well-received from a global climate perspective, but also supported many international discussions of the Belt and Road Initiative.

Indeed, building a global green agenda that takes climate and biodiversity as well as social and economic development into the core considerations, is challenging. It also needs consistent improvement and adjustment to different realities in the Belt and Road Participating countries, and the process of development. So, how was the implementation of China’s overseas coal exit decision?

The leading academic journal Science published a study in November 2022, supported by the Belt and Road Initiative International Cooperation Research, and the Belt and Road Initiative Initiative of China and the Belt and Road Initiative for Environmental Cooperation and Development, and many China-ASEAN universities.

The study finds that China is working within the multilateral framework to achieve its environmental ambitions. For example, in 2016, it announced to close down all its coal-fired power plants by 2030, and to make big commitments to social and environmental issues. In 2016, there were around 11,000 coal plants in China, which had been shutting down since 2012. The government also announced that it would close down all its coal-fired power plants by 2030, and to make big commitments to social and environmental issues.

In China, the government has taken several steps to address the problem of coal-fired power plants. It has imposed fines on companies that continue to use coal, and it has been implementing stricter regulations to limit the amount of coal that can be burned. In addition, it has been promoting the use of renewable energy, such as wind and solar power. These measures have helped to reduce China’s reliance on coal, and it has made significant progress in reducing its greenhouse gas emissions.

The Belt and Road Initiative, which is the most important initiative in the world, is playing a critical role in this process. The initiative has helped to promote cooperation and investment in clean energy projects, and has been promoting the use of renewable energy across the Belt and Road countries. This is helping to reduce China’s carbon footprint, and is contributing to the global effort to combat climate change.

China’s coal exit decision is a key element of the Belt and Road Initiative. The initiative has helped to promote cooperation and investment in clean energy projects, and has been promoting the use of renewable energy across the Belt and Road countries. This is helping to reduce China’s carbon footprint, and is contributing to the global effort to combat climate change.

Furthermore, China’s decision is also a significant step in its efforts to meet its commitment under the Paris Agreement. China has set a target of reaching carbon neutrality by 2060, and it is working hard to achieve this goal. The coal exit decision is an important step towards achieving this target.

In conclusion, China’s coal exit decision is a significant step in its efforts to reduce its carbon footprint and contribute to the global effort to combat climate change. The initiative has helped to promote cooperation and investment in clean energy projects, and has been promoting the use of renewable energy across the Belt and Road countries. This is helping to reduce China’s carbon footprint, and is contributing to the global effort to combat climate change.
A love that binds
New movie explores parent-child relations on Inner Mongolian steppe. Xu Fan reports.

G rowing up in the Inner Mongolian autonomous region, filmmaker Xia Sican wrote a shocking scene at the age of 10. Her mother, who has Alzheimer’s, was found wandering off. “She took his mother on a quest to seek the elusive ‘form’ that she dreams about.”

The movie, which was shot entirely in Mongolia, was released in domestic theaters on March 18 and has so far obtained a high rating of 7.6 points out of 10 on the popular review aggregate Douban.

The film, titled The Legend of the Dongson Ox and directed by Liu Chuanzhi, explores the interplay between two generations in rural Inner Mongolia. The protagonist’s relationship with a young woman, played by Cao Yu, is the driving force of the story.

The protagonist, played by Cao Yu, is a young woman who has just returned to her hometown after studying abroad. She is reunited with her childhood friend, played by Xia Sican, who has Alzheimer’s disease. The film follows the protagonist as she tries to reconnect with her past and help her friend come to terms with her condition.

The movie has received critical acclaim for its portrayal of the challenges faced by caregivers of people with Alzheimer’s and for its sensitive depiction of the bond between a mother and daughter.

The Legend of the Dongson Ox won the Golden Lion award at the Venice Film Festival in 2017. When asked about the movie’s success, Liu Chuanzhi said, “I’m very happy that the audience has recognized the film’s message.”

Xu Fan, who directed The Legend of the Dongson Ox, said, “This movie is a tribute to the resilience of families facing the challenges of Alzheimer’s.”

The film has been praised for its emotional depth and for its depiction of the bond between a mother and daughter. It has also been noted for its portrayal of the challenges faced by caregivers of people with Alzheimer’s.

The Legend of the Dongson Ox is a touching film that explores the bond between a mother and daughter and the challenges faced by caregivers of people with Alzheimer’s. It is a must-see for anyone interested in the human experience and the power of love and resilience.
Craftsmen maintain and innovate ancient packaging technologiesusp reports
Yang Feiyue.

One Pu ob has committed himself to carrying on the ancient craft of delicate painted containers that range from (clockwise from top left) an eight-colored foldable brev pictre, a suitcase, a box for storing an antique Chinese anter and a round porcelain box. Photos moved to China Daily

CONTAINING, HIS PASSION

During the Warring States Period (475-221 BC), a man from the State of Qi, known for his works of art, created an exquisite box to make a jewelry box out of imagnifi-

cial objects.

He carved the small neoprene box with space in giviving it a lasting for-
game and added exquisite ornamental parts and jade. As a result, he was eulogized by connoisseurs that when he sold the box, the customers would return the content and just keep it.

The profligate tale by Chinese philosopher Laozi, who lived in the third century BC, has been open to many interpretations, one of the most popular being about bad choices and failure to recognize what's more important. However, it also sheds light on the use of packaging vessels in beautif-

ously crafted wooden boxes, a craft that appeared in ancient times.

With the development of lentile and paper manufactur ing the Song Dynasty (960-1279), paper boxes came into being. They were favored by the court for their simple yet beautiful and elegant characteristics.

This type of paper box is made of gesso cardboard, with the outside being wrapped with Song brocade featuring grotesque colors and a soft texture. The inside is lined with cloth to make a pouch, a soft pocket, which was originally used to carry fragile items, such as ink stones and ink ingots, and later thread-bound books.

The art form continued to flour-

ish throughout the Ming (1368-1644) and Qing (1644-1911) dynasties, and manifested itself in various shapes and sizes, from jin-

ny boxes and caskets, to royal goods and gifts given by dignitaries.

The Qing court even brought together the art to make exquisite boxes.

Today, in Hebei district, North China’s Tianjin, Gao Feiyue has committed himself to carrying on this ancient craft, which was named a national intangible cultural herit-

gage in 2012.

In a narrow sense, the box is about making a set of packages for cultural and playful items, which are commonly known as "breath boxes," says Gao, adding that the main purpose is to preserve the con-

tents from breakage and prolong the box’s life to the utmost.

"It is a broad sense, it is beyond the production of outer packaging and involves a certain level of cultural relics protection and repair, similar to the work of the business of the royal palace in ancient times," he says.

Boxing clever

"The sophisticated, who just turned 50, is a local inheritor of the craft. He’s formed into a family of collectors of cultural items and, as a result, has been predisposed to ancient relics since childhood.

"He particularly esteemed relics and delicate structures of those boxes that hold the treasures," Gao

remarks.

"His interest grew as his appreciation for art developed and he led him to pursue a career making the his-

torical treasures.

Having studied and explored the knowledge and skills of cultural rel-

ics repair and finding for years, Gao

managed to rediscover his own studio at a local cultural museum in 2000."

"I mainly take care of, and tran-

spose, cultural relics for clients," he says. "When a client brings an item to me, he needs me to design and manufacture a new box according to the category and quality of the art-

ifact."

"If it is damaged, I also need to repair it, and if there are any place-

ment requirements, I need to match it with a box," he adds.

Gao considers it a process of artis-

craft re-creation, and he takes it as his mission to deliver a complete work of art.

The process of making an ancient container involves several prelimi-

nary steps, including conceptualiz-

ing the design, sketching the blueprints, and choosing the material-

als.

During the actual production pro-

cess, a dozen steps are taken, such as measuring the dimensions, cutting fabrics, constructing the frame and making the paste, the tracer and the clap.

"When receiving a cultural relic, the first step is to measure its basic dimensions and draw a basic mock-up of the box," Gao

says.

"A container generally has to be one-third larger than the box’s dimensions, which should be pre-

cisely measured.

"You need to ensure that, when the item is put inside, it will fit per-

fectly and be tightly sealed," he says.

"For example, a container for a porcelain bowl can be turned upside down without the bottom falling out.

Even if you throw it (in the box), the lid stays closed, and the bowl bottom is intact."

"When inspecting an im-

perial horse portrait, data on various parts should be obtained and then a relat-

ed model diagram needs to be drawn.

For fabrics, Song brocade, which has a gorgeous color and soft tex-

ture, is commonly used.

"This is based on the characteristics of the item. In fact, it will be made, using童 nesses and accept-

ance patterns that render a harmo-

nious effect inside and out," Gao

says, adding that traditional cut-

ting techniques are also applied.

For example, he made a container with a moon base and some both-

erial patterns for a butterfly-patterned suit.

"The handle can be invested in a slate in the background, as the cham-

bers of hands version it is be-

reduced and the whole thing creates a whole" plan, he explains.

Developing base skills

As for the material used for the packaging containers, they may vary with the variety of the items, depending on such factors as the collectible’s capacity to withstand force.

"Some materials include paper,

board, various types of wood, and composite board; while soft materi-

als range from brocades, satins, silks, linen and cotton," Gao says.

The next step is to glue the panels of the box together, which takes between two and seven days to com-

plete.

"It is key to make sure that the 

paper is smooth and syntactic; after the fabrics is pasted onto the surface of the box, with no cor-

ners left exposed, and that the pat-

tern and design are even and natural," Gao

says.

"The most crucial step, he adds, has to be making the interior."

"It directly relates to the protec-

tion of the antique and highlights its features," he explains, adding that the materials should be care-

fully chosen and meticulously ap-

plied."

The final step is to make the 

clasp and handle, which can be made out of jade, bone or wood, and can come in various forms.

"When inspecting a literary masterpiece, for example, a book is the main item, which can be worth millions.

"Challenging issues when fruits of an 

unfamiliar maker are handed over to you. For instance, when he was asked by a famed two years ago to repair a masterpiece item and to make a moulding for it, Gao went out of his way to deliver a natural-looking base.

"The box was eventually delivered a size of pale blue, but has still been strug-

gling to repair the splicing area."

"The process has been long, but I've picked up new knowledge in the process," Gao

says.

"I believe there’s something dif-

cult when handling various types of cultural relics and artifacts, usually, especially at the begin-

ning."

"They have differences and simi-

larities, but if we can master the similarity, it is easier for us to under-

stand new knowledge and techniques," he says.

"In fact, one of the biggest joys he gains from his work is the continuous acquisition of new knowledge and skills."

"I hope I can learn new things and improve myself every day," he says.

Gifting the knowledge

Many craftsmen like Gao have engaged in the ancient craft, which has gained greater attention both at home and abroad.

"Diao Bin from Beijing Media Technology Co., which employs artis-

craftsmen to make delicate bronze boxes and calligraphy in the old-fashioned way like Gao, says the company has been approached by Imperial major for designs to be executed in ancient art."

"Gao, he says, has also seen a significant rise in public interest in cultural relics and histo-

ry. It has sparked critical examination about the value of his trade and made him very demanding about his work."

"I insist on ensuring my inde-

pendence in artistic creation," he says, adding that sometimes it has caused him to offer his clients.

"He stresses that he feels obliged to take responsibility for every single piece that passes through his hands."

"Speaking about the future, Gao

says he plans to use the internet, such as the WeChat platform, to share his knowledge and skills of the trade.

"I’ll like to do any part to promote awareness, understanding, and appreciation of this art form to a wider audience," Gao

says.

A piece of jewelry is placed on a delicately carved wooden stand made by Gao.

Clockwise from top: Gao interests a possession from him at his work-

shop in Tianjin; Gao works on it a gong, a straight plucked instru-

ment; he sculpts a wooden pedestal; he sculpts a cultural relic.
Digging up the past to help the future

Archaeologists endure backbreaking work and long hours but every now and then they find something to make their efforts worthwhile, Wang Ru and Sun Ruisheng report in Taiyuan.

L i Lei remembers his first exposure to an archaeological explosion in 2002, when he was still an undergraduate working as an intern at the provincial Museum in Shangluo, Hubei province. After being shown a large collection of a man’s tomb, he jumped over the tombs and grabbed a cauldron covered up with a cloth. When he tried to open it by using the ‘shovel to dig up soil’, he was shocked. He, however, had a very good understanding of the importance of protecting human remains. “The historic cultural relics in China are always highly valued, nobody has a deeper understanding of the new things and facts than us, who are engaged with field archaeology,” Li Lei says.

The competition on archaeological exploration skills measures a competitor’s coking skill, which is part of the archeological survey usually conducted before excavations to provide reference for future digging. According to Hai Jin, former deputy director of the Shaanxi Provincial Institute of Cultural Relics and Archaeology, who worked as a judge for the competition, archaeological survey usually involves studying the environment, climate, topography, features of the land and then other potential factors.

From the stratigraphic perspective, archaeologists need to distinguish the chronological order with the oldest layer at the bottom. However, there are many different values from each old layer, so it’s almost impossible to study it all in detail. As a result, oral excavation techniques involving archaeologically interesting layers and identifying their time, says Hai.

The team of Li Xun led a survey, a small team including ‘Li Xun’ and ‘Liu Yan’ used a traditional tool for archaeology, the hand spade, to dig in the ground and lift off the soil sample. Then the team used a spade to dig into the soil and, according to the time of each layer, and form a picture. At last, the team gave each layer a note over the period of time. Usually, archaeologists are engaged with the work, they reach the normal layer with no evidence of different layers on the environment. After the procedures, archaeologists can gain a basic understanding of the soils, depths, ranges, and needs for possible later excavation.

The work must be done carefully, it may take several hours or even days. According to Zhang Wei, who has worked on an archaeological exploration for a company in Yuncheng, Shanxi province, the team needs to record the results. It will increase the excavator and the accuracy of the work. For example, archaeologists need to find if there is enough information enough to practice as low as possible. “Coring causes unavoidable impact to the underground remains. That’s why we try to gain information about the underground level from as few holes as possible,” says Li. However, in different periods, the ways of drilling holes are different.

Another difficult point lies in observing the soil to judge the time of layers, since it varies in different places. In addition, the site of cultural relics is usually found in the forest, where the forest and grassland are in the same area, the cultural relics simply involve the traditional materials, such as bricks, glaze, and some other materials. It is difficult to judge their source.

It is the same in Shaanxi province, where the city of Xi’an is famous for its historical relics. According to Li Jin, an archaeologist at the Shaanxi Academy of Cultural Heritage who worked as chief judge of the competition, the work is mainly to find cultural relics and chemicals. However, according to the team, this is not only about the skills and ability, but also about the physical strength and ability. It needs to be noted that many competitors have been trained for years.

Liu Yan, a competitor with a team of three, stands next to the three others who are engaged a small hole, and is standing in a corner. Liu Yan, who is wearing blue jeans, stands in front of the competitors. The team has been trained for more than 20 years, and has been engaged in such work for more than 10 years. “We are very diligent and hardworking,” she said.

In the competition, competitors are required to complete the tasks in the shortest time possible, according to Li. The tasks include two parts: the first part is to dig up the soil, and the second part is to identify the cultural relics. The team that finishes the task first is the winner.

The team that wins the competition will be awarded a certificate and a prize, according to Li. The prize is usually a set of tools, such as a spade, a shovel, and a ruler. The team that finishes the competition first will be awarded a certificate of excellence.

The competition is held every three years, and is open to all people who are interested in archaeology. The team that wins the competition will be awarded a certificate of excellence, and will be invited to participate in the next competition.

In the competition, the team that wins the competition will be awarded a certificate of excellence, and will be invited to participate in the next competition. The team that wins the competition will be awarded a certificate of excellence, and will be invited to participate in the next competition.
