China remains one of the safest nations in the world. That is because it has been among nations with the lowest crime rates. Violent offenses in the country has been on a continuous decline in recent decades, according to a report.

In past 20 years, crimes of international homicide, robbery and abduction have been on continuous dropping across the country. The number of people accused of such crimes decreased by nearly 80 percent from 2000 to 2020. According to the report issued recently by the Chinese Academy of Social Sciences, the country's crime rate has decreased by 30 percent in the last five years.

It revealed that the number of defendants convicted of serious violent crimes decreased by 9.6 percent from 2017 to 2020. In addition, offenses involving firearms were down 81 percent year-on-year in 2020, while those involving explosives declined 20 percent.

“Such changes have made the country a safer place for its people,” said Zhang Zheng, an associate professor at the institute.

He also called for a campaign to fight the crime of cyberbullying and trafficking women and children.

In September, more than 100 cases were solved and over 1,200 suspects captured, according to the police.

More cases concerning money laundering will be handled, as illegal gains and asset recovery measures will be implemented.

In the next two to three years, the country's crime rate will be under complete control, according to the report.

China remains one of the safest nations in the world.
Museums worldwide have through greater importance to sustainability in the past two years. Last year, "Museum for a Sustainable Future" was added to each institution's role at the 26th General Council of the International Council of Museums (ICOM) General Conference in Prague, Czech Republic.

If said: "Museums are key contributors to the well-being and sustainability of our society, and their mission is to preserve the cultural and natural heritage of humanity. They are uniquely placed to create a culture of sustainability and engage people in the protection of the environment."

International Museum Day was launched by ICOM in 1977. Every year since 2009, China has chosen a major venue to stage nationwide activities to celebrate the day. Fujian Museum in Fuzhou, capital of Fujian province, was the main venue this year, playing host to exhibitions, forums, light shows and many other activities last week.

Li Qiao, director of the National Cultural Heritage Administration of the State Administration of Cultural Heritage, said Fujian used to be an important starting point of the Maritime Silk Road. Quanzhou city, Fujian, a center of maritime trade during the Song (960-1279 AD) and Yuan (1279-1368) dynasties, was added to the World City World Heritage List in 2003, with the attribution "Quantou, Embryos of the World in South-East China."

This year marked the 10th anniversary of the Belt and Road Initiative. To commemorate the occasion, the exhibition "Qingtongzhi 5000 Years of China's Civilization Board-based Activities" was held at the Fujian Museum on Thursday.

The exhibition features 250 artifacts from the Belt and Road countries and areas leased by 19 cultural institutions and museums in China including the Palace Museum in Beijing, the Shanghai Museum, the Provincial Museum in Fujian, and the Maritime Museum in Shanghai.

A highlight of the display is a model jarshun, also known as the Fujian vessel, one of the types of ancient vessels discovered at the site of one of the largest shipwrecks of the Ming Dynasty. The inscription states that the raw material for the jar was brought back to China by Zheng during his fifth voyage.

"It is the only artifact to date with a year inscription that it is believed to be related to Zheng's voyage. It was given as a gift to Zhu Zhanji to mark his birthday," said Yang told. The exhibition also features a variety of porcelain, silk and tea, which were used to be major export commodities. Such artifacts provide clues to cultural exchanges. For example, a blue and white porcelain candlestick from the Ming Dynasty is highly prized in the West.

"It shows the mutual influence of both cultures, reflecting the harmonious sym- bolic of ancient times," Yang said.

"White porcelain made in Dehua county, Fujian, was a highly important com- monly shipped commodity. To illustrate an exhibition, a collection of Dehua white porcelain has also been opened at the Fujian Museum. Shi Ming, a professor at Shanghai Uni- versity's Academy of Arts and Design, said white porcelain from Dehua has long been known as top grade Chinese porce- lain, as they were shipped overseas in ancient times. In the West, they were known by the French in the 18th century as Blanc de Chine, or "white from China."

In the Song Dynasty, the Dehua Kiln began to prosper from maritime trade, and in the late Ming and early Qing (1644-1911) dynasties, white porcelain became a highly prized commodity from the Ming Dynasty. Huang Weibei, an expert in the study and collection of porcelain, has also written about the significance of such products. Jone, created by the Dehua Kiln, are now viewed as a major museum.

"It seems that Chinese artisans made such items to display to the emperor's imagination. Although the figures depicted by the statues are half-naked, they are very different from those made overseas. Their pose seem to be restricted, as if the emperor doesn't know where to put their hands, and they look as though they want to hide their semi-naked bodies," Huang said. "There are few intellectual trends about ancient craftsmen in China, but through their work we can get a glimpse of how they reacted to Western culture and their understanding of this culture."

Quick response

Similar statues are housed in the collections of many European museums, including the British Museum and the Victoria and Albert Museum in London, Han said.

When the exhibition opened at the Fujian Museum on Thursday, industry professionals attending a forum enthusiastically expressed their ideas for the sus- tainability of museums.

Zhou said that after the draft revision "Transforming our World". The 2015 Agenda for Sustainable Development was issued by the UN in 2015, the museum sec- tor responded quickly, and in 2016, ICOM established a working group on sustainabili- ty. The principle of sustainability features in ICOM's strategy for the next few years, and an exhibition in the Museum Year theme of "Endangered World: What is the Museum Doing for the Future?" was held in a video message to the International Museums Day and the 2016 International Museum Day theme is to encourage museums to put the lens of sustainability between humans and nature through their exhibitions.

"This demonstrates the need to make our profession a contribution to building a sustainable development model of the UN and a better world for human society," Zhou said.

Guo, deputy director of the National Cultural Heritage Administration, said sustainability requires museums to put the lens of sustainability between humans and nature through their exhibitions. Such institutions should also develop a green and low-carbon manner by saving energy and using green technology.

Li, the administration's director, said one of the major responsibilities of chang- ing a museum is energy consumption. The administration issues a report on how a museum is located used to be home to old indus- tries and abandoned factories, but the environment was not good. However, when the museum was established, environmental improvements took place. Local residents were offered free admission to the museum, and attended lectures on the importance of environment and protecting biodiversity. This was an initiative to improve the diversity of local environments and meet people's increasing pollination tactics to return to the area.

"In this way, the local environment is improving," Li said. "I thus believe that there is a complete renovation project, which will not only provide new meaning for people, but also integrate many resources to enhance the value of cultural heritage."

Museums have been held in muse- ums nationwide, including the provision of public services for evaluating cultural re- sources. For example, on Wednesday, Zhejiang Provincial Museum organized such activities as learning Zhejiang traditional culture, porcelain, jade, ancient paintings and calligra- phy were invited to answer questions and help evaluate collections.

Li Suqin, an expert in the study of ancient artifacts, said: "Such activities enable us to study排水 to our specialist knowledge to help those who need more knowledge in this way, we hope to answer the questions and help people learn more about the cultural heritage."

Wang Kanhua added: "We also co- developed this story."

Beijing symposium sheds modern light on efforts to showcase the past

By LIN QILin@shanghaiobserver.com

Visitors flocked to museums during the May Day holiday for historical and educational purposes.

A rough calculation by the National Cultural Heritage Administration shows that about 80 million people visited museums nationwide during this period.

"Thematic exhibitions are also being staged in many cities, including the "From the Cliff Gallery in Venice, Italy to the" exhibition at the Shanghai Museum. A display of masterpieces from the National Museum of Chinese History will be on show at the National Museum of Beijing from May 1 to May 31. The 2012 International Symposium of the Silk Road in Beijing Cultural Heritage and Museum Development was held in the city on Saturday, where several experts from China and other countries gathered to share their ideas on the development of the silk road from the 21st century. The symposium has been held with great success. It has been marked with some 360 exhibitions — digital and online — to introduce audiences to Beijing's diverse cultural and artistic resources, and to encourage the public to come up with ideas for developing cultural museum products."

Beijing's draft development plan for museum construction this year to 2020 states that the capital has ambitions to become "a city of museums", with 26 such institutions for every 100,000 people.

Min Gu, director-general of the Chinese Museum Association, said the city had laid out guidelines to better achieve the goal of "a city of museums" in the coming years.

The city also needs to enhance the overall planning for building museums as the capital of cultural development. The coming years have seen an improvement, with more attention paid to interaction between a museum and its host city, and ways in which museums blend in with their neighborhoods.

Li said that to give museums a cultural identity, urban planners should work to achieve "a city of culture, cultural heritage and its modern landscape"; to accentuate "temperament and spirit" that have been lost over time. It is said that local co-operation should be introduced among all museums to form a network that should be open to the public and could be visited with a single ticket.

By making the museum the focal point of the circle's idea to "think globally and act locally", it is museums that build museums with an international perspective, such as the National Museum of China and the Shanghai Museum.

As Li said, the International Museum Day theme of "The City of Museums" also reflect- ed the opening of the Shanghai Museum and the Shanghai Museum opened a diverse program of cultural exchange last year. The Shanghai Museum is committed to the arts and the environment. The museum reflects Shanghai's transforma- tion in the post-industrial era."
US urged to be sincere in relations with China

By XIE JUN
xiejun@chinadaily.com.cn

China urged the United States to show sincerity in bilateral communication and practical steps to bring China-US relations back to the right track, Foreign Ministry spokeswoman Mao Ning said on Monday.

Mao made the remarks after US President Joe Biden phoned Chinese President Xi Jinping that he expected ties with China to improve “very shortly,” dismissing an alleged “eye ballon” incident that caused a diplomatic spat earlier this year as a “whistle.

Mao said that the administration is considering listing sanctions on Defense Minister Li Shangfu, removing one barrier to a potential meeting with US Defense Secretary Lloyd Austin.

Beijing and Washington have maintained necessary communication, Mao said, a regular news conference.

She added that China firmly opposes any unilateral sanctions and has expressed its solemn stance on the issue.

“It is on the one hand, the US asks for communication, on the other, suppresses and sanctions China by every possible means, and imposes sanctions on Chinese officials, entities and companies, which is the sincerity and meaning of which the US and China have never been able to reach an agreement,” she said.

The US should redouble efforts to create a conducive environment and overcome obstacles and create favorable conditions for dialogues and talks, she said.

She urged the US to convert to a sensible China, and stop interfering in China’s internal affairs and undermining China’s sovereignty, security and development interests.

Also on Monday, the Foreign Ministry welcomed a decision by the World Health Assembly after China and Taiwan took part in the world health assembly, reaffirm Taiwan’s participation in the WHA.

The WHA asked for a constructive relationship with China, urging all countries to work together to strengthen global health and be ready for the situations involving China’s internal affairs.

The General Council and the Health Section of the WHA have respectively decided to reject the so-called proposal of "inviting Taiwan to participate in the WHO as an ‘observer’" submitted by Taiwan to the WHA.

The US, on the other hand, is misleadingly spreading the so-called "Taiwan independence"、“two Chinas” and "opposition to the one-China principle and opposition to the one-China policy".

Underlying these reasons is the US administration's will to use the WHA as an excuse to promote its self-righteousness, she said.

"We are evaluating the conclusion and assessing our next steps,” Mao said.

Beijing is now making its final decisions in response to the US' latest round of sanctions.

In a statement on Monday that had received notification of the conclusion of the review of its products sold in China, it said: “We are evaluating the situation and assessing our next steps,” Mao said.

Beijing has announced its decision to exclude the US from its own nuclear weapons sales to China, and is now preparing to implement the decision.

"We are evaluating the conclusion and assessing our next steps,” Mao said.

Security: Coercing others to impose restrictions ‘not in interest of any party’

We are evaluating the conclusion and assessing our next steps,” Mao said.

Companies in the Chinese market have already started to avoid dealing with products once owned by the government in March that the company was the subject of a cyberattack.

The security agency said in a statement on Monday that it had received notification of the conclusion of the review of its products sold in China.

"We are evaluating the situation and assessing our next steps,” Mao said.

Beijing has announced its decision to exclude the US from its own nuclear weapons sales to China, and is now preparing to implement the decision.

Supervision of insurance sector to be tightened

New regulator undermines solvency adequacy ratio, prevention of systemic risks

By SHI ZHONG in Shanghai
shi.zhong@chinadaily.com.cn

Supervision of the insurance industry, especially regarding insurer solvency, should be further strengthened to fully safeguard the healthy development of the sector, it was reported on Monday.

The call for strengthening supervision was made at the first meeting of the administration, which was launched on Thursday and has incorporated the better China Banking and Insurance Regulatory Commission.

The new agency is expected to ensure an insurer's net capital is not less than 20% of its minimum risk capital.

By the end of the first quarter of this year, the average comprehensive solvency adequacy ratio of the 150 insurance companies was 253 percent, with an average capital of 277.3 billion yuan, it was reported.

The supervision of the financial sector is expected to be strengthened.

Beijing provides palm-print access on subway line

By RUI JUAN
ruijuan@chinadaily.com.cn

A subway line that falls down in Beijin (Beijing, China) today, the Chinese capital's subway service restored, with the driver's palm printed on the palm of his hands and using the palm to warm the driver's hands, according to the Beijing Municipal Transport Commission.

The city has already invested in the new system to increase its efficiency.

The subway's control center can track the position of the subway through the palm, and the system's control center can also track the position of the subway through the palm, according to the Beijing Municipal Transport Commission.

On Sunday, the Beijing subway launched a new system that allows passengers to use their palm prints to enter the subway, according to the Beijing Municipal Transport Commission.

The ticket gate can recognize the user's palm print and voice with the system's voice assistant, which is more hygienic, faster and safer than the current system.

It is a one-time process, and the system's control center can track the position of the subway through the palm, and the system's control center can also track the position of the subway through the palm, according to the Beijing Municipal Transport Commission.

The system's control center can track the position of the subway through the palm, and the system's control center can also track the position of the subway through the palm, according to the Beijing Municipal Transport Commission.

China's tireless efforts to improve quality of life for children draw rockstar.
TALKING POINT

Dorms and dreams

Zou Shuo

I have attended the China International Confucius Culture Festival + Innovation and Entrepreneurship Competition four times. Each time, I have been amazed by the scale of the competition, which keeps growing every year, and how talented and hardworking university students are.

Their projects cover everything from robots, holograms, drones, fishing and agriculture, to even intelligent computational imaging. As someone who majored in English at undergraduate and postgraduate level, I have long admired the projects I have understood the projects. Therefore, every time I interviewed a student I first asked them to explain their work to the simplicity of the concepts, but there were still times when I could not understand them.

In addition to the high-end, fancy projects, there are those improving people’s lives, especially in rural areas.

A Bridges developer read by several investors in the world known, Zou Shuo, funded two robots for the rural areas. The two robots, one designed to make books can be launched in large enough to feed several hundred people.

I think that starting one’s own business means to be efficient and effective, especially for college students who also have to study. They cannot afford to waste time on unimportant things that can make their businesses successful.

Many students told me that they only started when they found a new job to do. A local investor, they needed to spend time on their businesses, and try to find interesting things. However, such people are often those who have failed to find a project that suits them. That is why the government spends billions on various educational programs to help students.

With the completion rate for people aged between 18 and 30, innovation and entrepreneurship are good ways of building employment levels among college students.

After the eighth edition of the competition, some projects have become successful and dozens of millions or even hundreds of thousands of people are benefited, the students will not be able to improve their lives and economies. The competition is intended to develop students’ innovation and practical skills.

Hopefully, as more get involved in the competition, the next major startups will come from students’ dormitories.

Promote measures to create favorable environment

BY ZOU SHUO

China has introduced a raft of measures to cultivate innovation and entrepreneurship among college students. The measures include the establishment of innovation and entrepreneurship centers in universities, to enhance students’ awareness of innovation and entrepreneurship. The guidelines urge universities to support student entrepreneurs by transferring study credits and setting up double learning schedules. Local governments and universities are ordered to make full use of resources to set up university-based business incubators and entrepreneurship centers and laboratories. Meanwhile, education, science, and technology departments are urged to set up venture funds for students’ business.

Moreover, a guideline issued by the Ministry of Education on 23rd September urged university students to expand their horizon when setting up businesses, and the papers, patents and other achievements in their entrepreneurship can be transferred into school credits. Grad students, undergraduates, and PhD students can all benefit from this policy.

While China is preoccupied with developing its economy, many other countries are following suit. In the United States, the government is taking action to encourage innovation, and entrepreneurship is a major focus of its policy.

The federal government is investing heavily in research and development, and has set up a number of programs to support entrepreneurship. For example, it has launched the “SBA 1958 Act” which provides financial support to small businesses, and the “Small Business Innovation Research Program” which provides grants to small businesses.

In addition, the government is also taking steps to improve the education system, and to encourage innovation and entrepreneurship. It has established a number of business schools, and has introduced a number of programs to support entrepreneurship, such as the “Entrepreneurship Education Act” which provides financial support to students.

Medical teams improve lives

Chinese aid strengthens public health capacity in Africa

Chinese doctors are putting smiles on the faces of Eritreans who have been grappling with health problems.

Doctors of the 16th Chinese medical team to Eritrea have conducted 346 surgeries and 2,350 medical inspections since they arrived in the East African country on April 1. This year marks the 30th anniversary of the establishment of diplomatic ties between China and Eritrea. Since 1992, nearly 380 Chinese doctors have worked in Eritrea.

In addition to Eritrea, medical teams sent by China are in operation in 50 countries, including 40 in Africa. Since 1963, when China sent its first medical team to Africa, the country has sent about 30,000 medical workers to 70 countries and regions, providing 300 million medical diagnoses and treatment services, according to China’s National Health Commission.

Dennis Munene, executive director of the China-Africa Center at the Africa Policy Institute in Nairobi, Kenya, said Chinese medical assistance over the past six decades has played a significant role in improving people’s health and the public health capacity of many African countries, resulting in a large decline in mortality rates.

Swarovski charts plan for sparkling growth

By CHEUNG Wai Sing

Swarovski’s shares have been on a rollercoaster ride recently. The company, owned by the Swarovski family, is known for its high-end crystal products. Its shares have been volatile, with some investors calling it a ‘diamond in the rough’. The company has announced plans to expand into new markets and increase its online presence.

Xiling gold mine shines brighter with discovery of 20-ton reserve

By ZHENG RUIYU

The Xiling gold mine in Zhejiang province has discovered a new deposit, adding to its already impressive reserves. The mine is known for its high-quality gold, and the discovery is expected to boost the company’s production and profitability.

Wuxi delegation’s 3-nation tour leads to blossoming of economic, trade ties

By CAI YAN

Wuxi, a city in Jiangsu province, has been on a mission to strengthen its economic and trade relationships with neighboring countries. Its delegation recently visited Singapore and Thailand, bringing back a flurry of agreements and promises to boost cooperation.

HONG KONG INVESTMENT CORPORATION LIMITED

HONG KONG INVESTMENT CORPORATION LIMITED (HKIC) is wholly owned by the Government of the Hong Kong Special Administrative Region. The HKIC consolidates the management of the investment activities of the Hong Kong Growth Portfolio, the Greater Bay Area Investment Fund and the Hong Kong TMT Fund. The objective of the HKIC is to invest in and operate financial assets in order to enhance the long-term competitiveness and economic viability of Hong Kong while generating investment income. In this regard, it pools together relevant resources from the Government to attract and support foreign and local enterprises to further develop Hong Kong's financial sector.

Chief Executive Officer

Key Responsibilities

Reporting to a Board chaired by the Financial Secretary ("the Chief Board"), the Chief Executive Officer has the overall executive responsibility for leading the HKIC in:

- identifying and managing investment opportunities and projects that can promote economic development and raise the competitiveness of Hong Kong in the long run, and strengthen Hong Kong’s ability to attract enterprises;
- managing the portfolio of companies and projects post-investment monitoring and portfolio performance reviews;
- developing investment and operational processes of the HKIC with the highest level of integrity and a sound risk management framework;
- and working closely with the Government, the Hong Kong Monetary Authority and other partners including the board's various Committees in pursing objectives of the Corporation.

Requirements

- upholding the Basic Law of the Hong Kong Special Administrative Region ("the Basic Law") of the People's Republic of China and bearing allegiance to the HKSAR;
- having passion and long-term vision for Hong Kong;
- having a record of success in a leadership role in a reputable organization, including but not limited to financial institutions, industry associations, local government or consultancy firms, regulatory authority, etc.;
- having integrity and professional ethics;
- having a sound understanding of experience in private equity markets;
- having a record of relevant experience and having strong conceptual, analytical, interpersonal, communication and presentation skills, and excellent language proficiency.

To Apply

Interested parties are invited to submit applications or nominations on or before 13 June 2023 to Mr. Peter Liu, Managing Director of Associate Consultants (HK) Ltd at postal address 102-764, 5F Wilson House, 19-27 Wyndham Street, Central, Hong Kong or by email to piliu@associateconsultants.com.hk. For enquiries, please call 3405 0477. Applicants not contacted within eight weeks from closing date may consider their applications unsuccessful. All applications will be handled in strict confidence by authorised personnel and will only be used for recruitment-related purposes.

Asianet

A high-level delegation from the Indian government has landed in Singapore, Republic of Singapore, to explore economic and trade opportunities and to promote the bilateral relationship. The delegation will also visit Thailand and Malaysia to discuss potential investments and cooperation in technology, infrastructure, and other sectors.

The delegation is led by Union Minister for External Affairs, S. Jaishankar, who is expected to meet with his counterparts and officials from the three countries. The delegation is expected to discuss issues such as connectivity, trade and investment, and cultural exchanges.

The visit is seen as a positive step towards enhancing the economic and diplomatic relations between India and the ASEAN countries.

African entrepreneurs partner with China for success, growth

Access to large market, technological know-how boon for budding businesses

By WANG JINGYAO and JIANG SONG

Siha Muyurka, based in his home country of Kenya, has worked and traveled extensively in China. It is there that he found a unique e-commerce firm called Kilimall for the development of an e-commerce platform that would better serve his country’s growing e-commerce sector.

"In Kenya, we have a lot of e-commerce startups which have been working on building platforms to give smaller operators, especially farmers, a chance to sell their produce," Muyurka said. "However, most of these startups are not able to provide the kind of support that can help these operators." Kilimall is the solution to that problem, Muyurka said.

The company is among a larger trend of Kenyan e-commerce firms building on the growing opportunities for technological innovation in Africa.

"It is an important step for China to support Africa’s digital transformation," said Wang Jinyi, president of the e-commerce research institute ZHIYOU Technology. "This is a great opportunity for Kenya to develop its e-commerce sector." Kilimall has been working with Alibaba Group to help it develop and expand its platform. The company said it has provided key support for Kilimall in terms of infrastructure, marketing, and technical assistance.

China has also committed to provide $10 billion in financing for Africa over the next three years. This is expected to help Kilimall and other e-commerce firms in Kenya expand their operations and reach new customers.

"We are very excited about this partnership," said Wang. "It is a great opportunity for Kilimall to expand its business in Africa and reach new customers. We are confident that Kilimall will be able to leverage the resources and support from Alibaba to help its customers succeed in the e-commerce sector."
Quadrilateral summit aims to modernize and prosper

The US has been promoting a greater interest in the Quad, a strategic partnership among leading countries in the global economy, as part of its strategy to counter China's rise in the region. The Quad was created in 2002 to promote stability and prosperity in the Indo-Pacific region.

The Quad includes the United States, Japan, India, and Australia, and its members share common interests in maintaining regional peace and security. The Quad has been working together to address challenges such as climate change, terrorism, and proliferation of weapons of mass destruction. The Quad Summit, held in Tokyo in 2022, saw the participation of leaders from the four countries to discuss issues of mutual concern.

At the Summit, the leaders agreed to establish a new Quad Framework for Security and Cooperation (Quad Framework for Security and Cooperation). The Quad Framework aims to build on existing security and cooperation arrangements in the region, including the Quad’s own measures to address security challenges.

The Quad Framework for Security and Cooperation is an important step towards building a more stable and prosperous Indo-Pacific region. It is expected to enhance theQuad’s ability to respond to challenges and promote regional cooperation.

The leaders also pledged to strengthen the Quad’s institutional framework, including the establishment of a Quad Coordination Mechanism (Quad Coordination Mechanism). The Quad Coordination Mechanism will serve as a forum for the Quad to discuss and coordinate on issues of mutual concern.

The Quad’s leadership has also committed to working together on other regional issues, such as addressing the COVID-19 pandemic, promoting global health security, and strengthening economic cooperation.

Overall, the Quad Summit and the Quad Framework for Security and Cooperation represent a significant milestone in the Quad’s development as an important regional forum. The Quad’s leadership is committed to working together to build a more stable and prosperous Indo-Pacific region.

Western media organizations happy to happy

Since the pressure from Washington for him to step down on resolu- tion was enough for United Kingdom Prime Minister Liz Truss to quit, Sunak has been under growing pressure to resign. Sunak, who was appointed as Chancellor of the Exchequer in 2019, has been facing criticism for his handling of the UK’s economic policy.

Sunak is facing calls to resign, both from within his own Conservative Party and from opposition parties. The pressure on Sunak to resign has been building in recent weeks, with MPs and members of the public calling for his resignation over issues such as the government’s handling of the cost of living crisis and the NHS winter crisis.

Sunak’s position as Chancellor of the Exchequer has come under increased scrutiny, with questions being raised about his handling of the UK’s economic policy. Some have accused Sunak of making cuts to public services and failing to address the cost of living crisis.

In a statement, Sunak said: “I will work together as the Chancellor and with other countries to make sure that we can deliver on our shared commitments.

Western media organizations, such as the Guardian and The Times, have been closely following the latest developments in the UK’s political landscape. They have been quick to report on the pressure on Sunak to resign, with many articles highlighting the growing calls for his resignation.

Some media organizations have also been critical of Sunak’s handling of the UK’s economic policy, with articles questioning his approach to addressing the cost of living crisis.

Despite the pressure on Sunak to resign, it remains to be seen whether he will be able to weather the storm. The situation will likely continue to be closely watched by media organizations and the public alike, with the outcome of the ongoing political saga in the UK expected to have implications for global politics.

Quadrilateral summit aims to modernize and prosper

The Quad’s leadership has also committed to working together on other regional issues, such as addressing the COVID-19 pandemic, promoting global health security, and strengthening economic cooperation. The Quad’s leadership is committed to working together to build a more stable and prosperous Indo-Pacific region.

The Quad Summit and the Quad Framework for Security and Cooperation represent a significant milestone in the Quad’s development as an important regional forum. The Quad’s leadership is committed to working together to build a more stable and prosperous Indo-Pacific region.

Xi’s summit rebuts Western lies

The just-concluded China-Central Asia Summit is a platform for promoting regional cooperation and development in various fields, from infrastructure and trade to cultural exchanges.

China and Russia share a common interest in fostering regional stability and development. Both countries have strong economic relations. The Central Asian region, comprising upper-middle-income countries, holds the potential to become a driver of global economic growth, with its vast natural resources and strong ties to China and Russia.

On economic terms, the Central Asian countries have ample resources to support economic development. However, these resources have not been fully tapped, and the region remains largely dependent on external sources.

For instance, in the case of Turkmenistan, the country has abundant natural gas resources, but it has not managed to attract significant foreign investment to develop its infrastructure and industries. Similarly, Kazakhstan and Uzbekistan have large oil and gas reserves, but they struggle to diversify their economies and attract foreign investors.

In terms of trade, the Central Asian countries have a high proportion of trade with China and Russia. However, the trade is concentrated in a few sectors, and the countries need to diversify their trade relationships to reduce their dependence on China and Russia.

The Central Asian states need to focus on developing their infrastructure, improving their governance, and attracting foreign investment to support their economic development. They also need to improve their trade relations with other countries, including Europe and the United States, to reduce their dependence on China and Russia.

The Chinese government has been actively promoting regional cooperation and development in Central Asia. It has been providing financial support, infrastructure development, and capacity building to the Central Asian countries.

Xi Jinping, the Chinese President, has emphasized the importance of regional cooperation and development in Central Asia. He has called for establishing a China-Central Asia Economic and Cultural Cooperation Forum to promote economic and cultural exchanges.

In conclusion, the China-Central Asia Summit has been a success in promoting regional cooperation and development in Central Asia. The summit has provided a platform for the Central Asian countries to discuss their common interests and work together to address their economic challenges.

The Central Asian countries need to work together to strengthen their economic relations and develop their infrastructure to support their economic development. They also need to attract foreign investment and diversify their trade relations to reduce their dependence on China and Russia.

China and Russia are committed to promoting regional cooperation and development in Central Asia. They have been actively promoting regional cooperation and development in Central Asia through various initiatives.

In conclusion, the China-Central Asia Summit has been a success in promoting regional cooperation and development in Central Asia. The summit has provided a platform for the Central Asian countries to discuss their common interests and work together to address their economic challenges.
GLOBAL VIEWS

For the US, a double-standard international economic order is one where it gets to make and abuse the rules

By FENG YUNHAI

Security situation needs defusing

China needs to take practical actions to expand cooperation in East Asia to dissolve hostility and enhance trust

by WANG HUI

Maker and breaker

In a world undergoing profound changes, China needs to identify its fundamental strategic interests and regional security trends to create a favorable international and neighborhood security environment. China advocates peace, development, equity, justice, democracy, freedom, the common values of humanity, as well as the vision of comprehensive, collaborative, and sustainable security.

A head-on conflict between the US and the UK in the Middle East could become the domino effect that results in a rapid deterioration of an already-tense situation in the Middle East. The US has long been advocating a "double-standard" international economic order, where it gets to make and abuse the rules.

China's Belt and Road Initiative (BRI) is a major effort to implement the "double-standard" international economic order. The US has repeatedly criticized China's BRI as "neo-colonialism" and "debt trap diplomacy," aiming to disrupt China's cooperation with other countries. The US has reversed its previous strategy and adopted a "double-standard" international economic order.

China is facing a complex international environment. The US, as the world's only superpower, has used its economic and military power to create a "double-standard" international economic order. The US is accused of "economic coercion" for its economic and military pressure on China.

China is determined to defend its national interests and sovereignty. Under the soft glow of a light, hands balled into fists and hands held high to mark the beginning of the festival, the audienceMeyidepota, a traditional folk music from the Miao minority, filled the air with its unique rhythm and melody. "We are so proud to have this festival, which brings together music from various regions and cultures," said a local resident.

The festival, held in Yangshuo, a picturesque town in Guangxi, is known for its stunning natural beauty and rich cultural heritage. With music, dance, and traditional costumes, the festival celebrates the diversity and unity of the region.

A variety of performances on stage, including orchestras, traditional music, and modern dance, showcased the unique cultural features of Guangxi. The lively atmosphere attracted music lovers from all over the world, and the festival became a platform for cultural exchange and cooperation.

The festival also featured music workshops, cultural talks, and art exhibitions, providing a comprehensive experience for visitors. It is not only a festival of music but also a celebration of culture, heritage, and unity.

The festival helps village tunes into wider audience

Guangxi ethnic performers and ASEAN bloc musicians exchange musical culture, establishing bonds, report Xing Wen and Shi Ruipeng in Nanning

A music festival, held from May 19 to 21, features a range of performances from various ethnic groups and regions in Guangxi and Vietnam. The festival aims to promote cultural exchange and cooperation between the two countries.

The festival includes a variety of cultural activities, such as music performances, dance shows, and traditional craft exhibitions. It brings together artists from both countries to share their cultural experiences and showcase their talents.

The festival also focuses on promoting cultural exchange and understanding. It offers a platform for artists to connect and collaborate, fostering a deeper understanding of each other's cultures.

Book restorers keep ancient treasures alive

By WANG KAIJIAO

The restoration of a precious copy of the Song dynasty’s "Yongle Encyclopaedia," which was completed through a special exhibition at the National Library of China, is a testament to the wisdom and dedication of book restorers. The restoration project, initiated by the National Library of China and supported by the Ministry of Culture and Tourism, aimed to preserve China’s cultural heritage and provide a valuable resource for future generations.

The "Yongle Encyclopaedia" was compiled during the reign of Emperor Yongle of the Ming dynasty and was completed in 1403. It is considered one of the most significant works in Chinese history, containing comprehensive information on various fields such as science, technology, literature, and the arts.

The restoration project involved skilled restorers working on the manuscript for over two years. They used modern technology and traditional methods to preserve the book’s physical integrity and ensure its long-term preservation. The restoration process included cleaning, repairing, and binding the pages to restore the book’s original appearance.

The book’s restoration is significant not only for its cultural value but also for its potential to provide insights into the intellectual and scientific development of China during the Ming dynasty. It is a reminder of the importance of preserving our cultural heritage and the wisdom of those who dedicated their lives to it.

A thirst for tea culture

After China gave up its secrets on making silk, an ancient trade route was put to many other lucrative uses, report Deng Zhangyu and Li Yingqing in Kunming.

By Deng Zhangyu and Li Yingqing

In a forest on Jingshan Mountain in Lincang county, Yunnan province, Xian Jin, 22, named tea under a tea tree more than 200 years old. She says she has looked forward to this day for years.

In front of her was a smartphone through whose screen viewers were delving her questions about the taste of the tea and the local tea culture.

Xian Jin lives with the viewsters through a viewing platform that demonstrates how picking is done, and now and again they enjoy a snack provided by the locals.

In March, she is one of the local viewsters, and from May to October, they all join in viewster groups to promote picking.

Xian Jin, who lives in her own tea plantation in Jinchang town, says, "I have been picking tea since I was young, and I love it. I hope others will enjoy it as much as I do."
Sound of the past, note for the future

Traditional bamboo flute attracts new admirers with its melodious tone, Wang Ru reports.

O
t a warm spring day, a group of people gathered to listen to music performed on a bamboo flute. The instrument, played by an expert, was able to evoke memories of childhood and inspire thoughts about the future.

Shen Yinghui is a 53-year-old music lover who first became interested in the bamboo flute when he was a child. He has been playing the instrument for over 16 years and has written extensively about its history and evolution.

Shen was attracted to the instrument after hearing a tape of Chinese music produced by the Shanghai Middle School. He was fascinated by the sound and decided to learn to play it. During his early years, he took a train for more than 20 hours to Shanghai to practice with the school’s music teacher, who taught him the basic techniques.

Shen decided to learn to play the instrument after meeting a music teacher who was a fan of the flute. He was able to learn from the teacher and eventually became skilled enough to perform in public.

Shen has written extensively about the bamboo flute and its history, and has been involved in promoting its use as a cultural symbol of China. He has also written about the flute’s role in the development of Chinese music, and its influence on other musical traditions around the world.

Shen has performed at various events, including the 2008 Beijing Olympics and the 2010 Shanghai World Expo. He has also been involved in music education programs and has taught many young people how to play the bamboo flute.

Shen is now touring with his family to perform the bamboo flute in different parts of the world. He hopes to continue spreading the beauty of this ancient instrument and inspire others to learn and appreciate it as well.

Lure of pandas is always worth bearing in mind

Pandas have always been a source of fascination for people around the world. Despite their limited diet and low reproductive rate, these cute and cuddly creatures have captured the hearts of billions of people.

The first pandas were introduced to the West in the early 1900s, and they quickly became a symbol of China. In the 1930s, a panda was presented to U.S. President Franklin D. Roosevelt, and it quickly became a favorite of the American public.

Today, pandas are known as national symbols of China, and they are revered by people all over the world. The panda has also become a symbol of China’s relationship with other countries, and it is often used as a symbol of friendship and cooperation.

Despite their limited population, pandas are still a popular attraction for people visiting China. Many visitors take the time to watch these rare animals up close, and they often leave with a newfound appreciation for these gentle giants.

Pandas are also a symbol of the importance of conservation and environmental protection. They are an example of a species that is at risk due to habitat loss and other human activities, and they serve as a reminder of the need for action to protect our natural world.

In conclusion, pandas are a source of inspiration and joy for people all over the world. They are a symbol of China’s rich culture and history, and they continue to capture the imagination of people everywhere.
