**President Xi highlights ecological security**

President stresses need to strengthen efforts in nation's campaign against desertification

**By XX WEI**

President Xi Jinping has highlighted the significance of strengthening desertification control and prevention to develop an even stronger green belt to the nation's northern regions and secure greater outcomes in building a beautiful China.

Speaking during a meeting with officials on Tuesday in Beijing in the Inner Mongolia autonomous region, Xi, who is also general secretary of the Communist Party of China Central Committee and chairman of the Central Military Commission, called for sustained efforts to create new initiatives in desertification control.

**Country offers distinct non-Western model of development**

**By World Watch **

The process of modernization began in the 18th century during the Industrial Revolution, which initiated a period of rapid industrialization, urbanization and the rise of capitalism. These developments propelled Western nations to positions of global power and influence as they became leaders in industrial production, trade and economic expansion.

The period of Western modernization also discriminated Western mass, philosophy and reason, which has had a worldwide impact through processes such as globalization, media dissemination and cultural exchanges. But Western modernization has its shortcomings.

The Western-centric narratives of modernization sometimes overlook the contributions of non-Western nations and their distinct paths of development.

China in the early 20th century has achieved tremendous outcomes in its anti-desertification efforts over the past four decades through the launching of the Three-North Program, the Grain for Green program and projects to tackle sandstorms in Beijing and Tianshui.

However, he pointed out that desertification remains a major global ecological problem demanding the most serious concern and developmental measures.

The Ministry of Ecology and Urbanization, the country's key ministry in charge of environmental protection, said Xi emphasized that China has achieved tremendous outcomes in its anti-desertification efforts over the past four decades through the launching of the Three-North Program, the Grain for Green program and projects to tackle sandstorms in Beijing and Tianshui.

President Xi Jinping, who is also chairman of the Central Military Commission and chairman of the Central Military Commission, called for sustained efforts to create new initiatives in desertification control.

**STUDENTS TAKE TO THE ROADS TO PROVE THEIR KNOWLEDGE**

**Learning tours prove popular with primary, secondary school pupils**

**By YANG PUFEI**

Hua Liang recently learned a lot more about bridges.

The primary school student from Anhui, China, visited the Shangden Bridge in the city’s Shangden County and the Minghu Bridge in the county’s Minghu area. The visit gave him an opportunity to understand the structure and learn how physics, chemistry and geology play a role in building suspension bridges.

"By exploring the bridges, I learned about the differences among beam, arch, cable-stayed and suspension bridges," said Liang. "The engineers responsible for such constructions are truly remarkable."

While working at a height of 78 meters, the Baligang Bridge is one of the tallest riverside bridges in China. Touring among the stonework, a sightseeing path on the bridge appreciates the majestic valley scenery and the convergence of nature and modern technology.

Policy initiatives, diverse experiences and improved services are fuelling such student learning trips.

**Game changer**

Shawn cuddled up to a scrubbing cat in the yard that was not very long ago, but now he was missing his owner.

About three months ago, the cat was adopted by a neighbor, and since then, he has been spending more time with Shawn. However, Shawn has recently decided to adopt a similar cat of his own, and he plans to name it "Scruffy."

The adoption process has been challenging, but Shawn is committed to providing the best care for his new companion. He has already taken the cat to the vet for a check-up and has started feeding him high-quality cat food.

Shawn is looking forward to spending more time with Scruffy and hopes to find a way to adjust his lifestyle to accommodate the new addition to his family.

**Trade with China supports over 1 million jobs in US**

As policymakers in the United States and China each consider decisions related to the future of the bilateral relationship, it is important that they take into account the stabilizing and beneficial role of trade with both countries. This is particularly evident in the US, where more than 1 million jobs supported by Chinese purchases are at risk.

In 2012, US goods exports to China increased 12 percent year-on-year, and services exports increased 14 percent, creating an overall US service surplus of $19 billion. This is consistent with China's policy of encouraging trade and cooperation with the United States.

Academic research indicates that more than 1 million US jobs are at risk due to China's large market size and high import growth.

At the same time, the US has a significant advantage in China's market as well. In 2013, China imported 12 percent more US goods than it did in 2012, and the US is projected to be the world's largest exporter of goods to China in 2014.

The Chinese government has been actively promoting trade with the United States, and it has made significant efforts to improve the business environment for US companies in China.

In conclusion, trade with China is an important component of the US economy, and it is essential to maintain a strong and mutually beneficial relationship with China. This requires a continued commitment to open markets, mutual respect, and a shared understanding of the importance of economic cooperation and growth.
**Trips:** Educational destinations on the rise

**From page 1**

A recent report from the China Tourism Academy showed that a rising number of tourists are forming learning experiences for students.

More than 6 million people embarked on study tours last year, more than the previous year's total of 4.5 million. Data from the National Population and Family Planning Commission shows that the number of such trips more than doubled for the past two years, as the major reason for such trips was to see the culture and history of the destination.

"In the past few years, the numbers of students participating in study tours have significantly increased," said Wang Tao, a tourism analyst. "This can be attributed to the growing interest in educational tourism and the desire to provide students with a more comprehensive learning experience.

The report also notes that the number of students participating in educational tourism has more than doubled from 2017 to 2019, with an increase of about 10% per year. This growth is partly due to the increasing popularity of educational tourism and the desire to enhance the educational value of study tours.

In addition to studying, students are also encouraged to participate in cultural activities, such as visiting museums and historical sites. These activities are designed to help students gain a deeper understanding of the local culture and history, and to foster a sense of national pride and cultural heritage.

"The growth of educational tourism not only enriches the students' learning experience but also promotes cultural exchange and understanding," said Li Xia, a tourism policy expert. "It is a win-win situation for both students and destination countries.

"It's like moving from the classroom to the grand auditorium of nature—enabling students to commune with rural culture.**

Wang Wang, a teacher at Beyond the City, a things company that arranges study tours for students to experience rural life,

"It's a unique way for students to learn more about the natural world and the people who live there. It also helps them develop a deeper appreciation for the environment and the importance of preserving cultural heritage."
First China-built large cruise ship undocks

China's first domestically built large cruise ship, Adora Magic City, completes the undocking process in Shanghai on Tuesday. Measuring 335,000 in length and 517,513 in beam width, the cruise ship ran accommodation of 2,546 guests.

The ship is designed to offer a premium experience for passengers. It will sail to various destinations, including Singapore, Japan, and South Korea.

The undocking marks a significant milestone for the shipyard and China's maritime industry. The ship is the first of several such vessels that will be built in China, helping to expand the country's cruise ship fleet.

Path: Malaysia open to learning from other models

From page 1

China's journey of modernization began in the late 1970s with the implementation of market-oriented reforms and the policy of opening up. It has become a globally recognized economic power, with a rapidly growing middle class, strong manufacturing base, and a significant role in global affairs.

As a result of these reforms, China has transformed into a second-largest economy and a major player in global politics. It has lifted hundreds of millions of people out of poverty and contributed to global economic growth, making it an integral part of the global economy.

China's success in modernization is attributed to several factors, including its one-child policy, high educational standards, and strong government support. The country has also invested heavily in infrastructure, technology, and education, which has contributed to its economic growth.

In recent years, China has faced challenges such as environmental issues, economic inequality, and regional disparities. However, it has continued to grow and transform, maintaining its position as a global economic power.

In conclusion, China's journey of modernization has been marked by significant achievements and challenges. It serves as a model for other countries aspiring to achieve similar growth and development.
SARs’ legal experts bring skills to GBA

Policies promote better understanding of mainland’s legal development

By CLAYDIN Tam, Shenzhen, guangming@chinadaily.com.cn

The introduction of policies meant the province of the Greater Bay Area can benefit from legal professionals’ greater understanding of the mainland’s legal and judicial systems by practicing how to handle cases based on mainland and Macao special administrative regions’ experience.

The trial work in nine cities in Guangdong province after passing an exam. This plan was implemented on a trial and two pilot-case examinations have been held so far with hundreds of pilots.

The decision by the National People’s Congress Standing Committee was seen as a way to expand the jurisdiction of the Shenzhen and Macao professional organizations and expedite the integration of the development of the rule of law in the GBA.

Yuan Wenhong, the former chairman of the Shenzhen Bar Association, has kept a close eye on the progress of the policy. Yuan noted that Tam said he is interested in the experience of the legal profession in Guangdong Province.

As a specialist in the field of intellectual property, Yuan appreciated the Guangdong Judicial Tools, a flexible tool that is used to deal with easily classified non-public data.

The exercise is an important means to safeguard internet silence, which plays an important role in the promotion of the intellectual property protection mechanism in the internet.

Pioneer Chinese scientist Lu Yuanji dies at 103

By ZHOU LEI

A distinguished scientist, Lu Yuanji, a recipient of the 1st July Medal, the Communist Party of China’s highest honor, died on Tuesday in Beijing. He was 103.

Lu was one of the most decented scientists in China and one of the founders of the country’s space industry.

He was an expert on atomic energy, nuclear power and nuclear technology.

Born in Shangqiu, Henan province, Lu was a diligent student. He was admitted to the department of aeronautical engineering at the National Central University in 1937 and graduated four years later.

In 1943, he went to the United States to research internal combustion at the Massachusetts Institute of Technology under the direction of Charles Stark Draper, known as the father of the Guidance and Control System, who played a key role in the Apollo landing mission.

After receiving his doctorate at MIT in 1947, Lu continued his research in the US until 1956.

Due to the political atmosphere at the time, many scientists and students of Chinese origin working and studying in the US wanted from returning or travelling to China.

The official reason was matters of confidentiality, according to Chinese sources. Lu was able to overcome the US government’s objections and returned with his family in China.

Soon after his return, Lu was tasked with helping to establish the Chinese Academy of Sciences’ Wright Institute of Automatic, later renamed the Beijing Institute of Automation.

At the institute, he took part in the planning and design work for the one-engine test-bed satellite for probing the outer space and for space research satellites.

He also led the research and development of China’s first satellite, which was to be launched into orbit in April 1970.

Lu was the director of the Beijing Institute of Automation from 1984 and an associate member of the Chinese Academy of Engineering in 1989.

He was a senior adviser to China’s Aerospace Science and Industry Corp, China Aerospace Science and Industry Corp, two leading space companies.

In his lifetime, this service and contribution to the nation and the Communist Party of China, he was a recipient of 29 Party members awarded in China’s 100th anniversary ceremony on September 1, 2021, and he also received the 100th anniversary of CPC Central Committee, at a ceremony in the Great Hall of the People in Beijing on June 21.

Lu was honored as a recipient of the 5th title of the first time that year, which also part of the 100th anniversary of the CPC’s founding.

A woman refuses to pay Qomolangma rescue fee

The Qomolangma (Everest) rescue fee begins at a height of 6,500 meters, at that altitude and higher, there is not enough oxygen for humans to breathe and so the human body is forced to develop oxygen deprivation.

But said Shanghai that he and another member of the team asked whether her whether she would join them before the descent but she refused that instead they would do alpine style. But said she would make alpine-style but added that neither of the team members near the summit. But the team said they will set up a base camp near the cirque so as possible after a pre-morning the summit and the woman will be able to take their trip and join them in the descent. She will return to their residence. The rescue work took 11 hours.

However, once restored and the life saved, she has refused to pay the 300,000 yuan cost and not only agreed to pay 2,000 yuan instead that said he is going to pay 50,000 yuan for every one million yuan, he said.

Xinjiang investigates forced group tours on summer holidays

The Xinjiang Uygur autonomous region is investigating several companies for allegedly forcing tourists to tour the Xinjiang province, since joining low-price tour groups or through official travel agency.

According to a release from the region’s culture and tourism department, several tourism companies in Xinjiang and Wanzhou, Hebei province have been charged with intentionally low-price tours to Xinjiang from mid-April.

The companies were out of the local service for one or two tourism companies in the region – Xitong International Tourism and Xinjiang Juncheng International Tourism.

However, the companies refused to offer services to tourists that have not been charged as intended.

The companies’ illegal behavior damaged the interests and rights of 120 tourists from Shangqiu, and Shanghao and Wenzhou of Zhejiang province, the department said.

Xinjiang’s Shanshan, as well as seven other cities in Xinjiang province – Dabancheng, Baidu, Shigatse and Anhui – experienced such treatment from the two companies after joining low-price tours to Xinjiang in May.

According to the department, the women in Xinjiang were offered tours for 1,000 yuan, which was 10-day tour with accommodation, including a buy one get one free deal, however the regular price for each tourist is over 4,000 yuan per person.

The cases are still under investigation.

It’s a more attractive ‘product’ for old people, who have time for travel but are always busy in life. My uncle, my father’s older brother, or 60 years old, once booked a group tour to Sanya, Hainan province, with an amazing price of $880 (6,880 yuan) for four days and three nights.

The man’s uncle paid a 300,000 yuan deposit, but didn’t go as he found something wrong with the trip.

A woman refused to pay the 300,000 yuan cost and not only agreed to pay 2,000 yuan instead that said he is going to pay 50,000 yuan for every one million yuan.

“We set a travel bonus during the May Day holiday (April 29 to May 3) with many tourists visiting the base camp in the region’s Bi-latinum city said, a local tour operator. ‘Product means led by kids for at least half a hour or over an hour to take a picture in front of the snow mountain with the altitude above 8,000 meters organized to it.

He said travel around the base camp usually depart from Ela, the region’s capital, and come back. They are very important for the day, they will travel around the base camp from Ela and return to Ela again in the morning.

The base camp we usually mean to see the top, and the mountain climbers have their base camp located at Rongbuk. As far as I know, the mountain climbers would take at least one month of training before starting their journey to the Qomolangma summit. The Qomolangma has a height of 8,848 meters.

Policy Digest

Farm machines mobilized as winter wheat sprouts

With the wheat harvest in full swing, some 300 million hectares of winter wheat have already been harvested for more than 20 percent of winter wheat planted in the current season. The ministry issued an online statement, affirming that agricultural authorities are working together with weather forecasters and other agencies to grasp the status of different quality periods of harvests.

Continuous rainfall has been affecting Huanghuai, a major wheat production area in China. Officials have been warning farmers not to mow and dry the wheat stems before being separated to prevent the wheat from opening and spoiling during the harvesting process.

Affected areas have been speedily providing workers and farm machines, draining forward, and adopting the working hours for harvesters and running grain drying facilities for full utilization of harvests.

Screening for oral cancer: breast cancer is enhanced

Some 120,000 women in China suffer from oral cancer and 100,000 women for breast cancer. Women are free of charge since the launch of a national randomized controlled screening for the two cancers in 2008, according to the National Health Commission.

Screening for oral cancer will be enhanced further to lower the threat of severe illness and death, according to Song, and the country will pack efforts to launch against HPV and implement health education to boost public awareness of the seriousness of the illnesses.

New national standards for cancer medical-technique

The State Administration for Market Regulation (SAMR) announced the national sanitary standards for cancer medical-technique on June 1, 2023.

The new standards provide guidance for diagnosing and examining cancer patients. The guidance will come into effect on June 1, 2023.

Cancer diseases, which are used extensively in a number of fields, including agriculture, forestry and pharmacy, are easily confused for use in unlisted or illegal drugs, posing a potential risk to national and public safety, according to the standards.

It added that some products developed by disciplined or experienced companies are poorly designed, often posing a risk to lives and health.

WANG QIANGYU

AUTHORITIES demand forces to deal with the problems of false publicity and the risks and benefits of medical-technique.

By YANG ZEKEN

Administrative and Judicial authorities are intensifying the fight against false publicity and the risks of medical-technique. The authorities launched a series of measures to address these problems.

Last month, seven central departments and authorities, including the National Health Commission, the Ministry of Justice and the Ministry of Public Security, released a guideline to regulate the manufacture, sale and advertising of medical-technique and to prevent the risk of false publicity.

Administrative and Judicial authorities are intensifying the fight against false publicity and the risks of medical-technique. The authorities launched a series of measures to address these problems.
Sino-Thai ties set to pick up momentum

The long-term friendship between China and Thailand, which has maintained strategic partnership self-explaining in the mind, is expected to lead to the next generation of Thai leaders, understanding of the policies of the governments they plan to form together.

Geographical advantage

The proximity of several major areas, there's potential for cooperation between China and Thailand as the two countries enjoy geographic advantages. China's international presence and the geographical proximity between the two countries makes it possible for Thailand and China to explore cooperation in several areas.

Chinese-Thai trade

China and Thailand maintain strong economic ties, with China being Thailand’s largest trade partner. In recent years, bilateral trade between the two countries has continued to grow, reflecting the deepening economic and political relations.

Relations will be maintained no matter who leads next government, experts say

By YANG JINGXIN in Bangkok yangjingxin@emailchina.com

The Thai election, expected to be held in late March or early April, is the most significant political event in the region in the coming year. The outcome will have implications for regional stability and cooperation.

The election is expected to be a close contest, with several parties vying for power. The ruling coalition, led by Prime Minister Prayut Chan-o-cha, is expected to face a strong challenge from opposition parties, particularly the pro-democracy movement.

The election is critical for Thailand's economic and political stability, as well as for its regional standing in the face of increasing geopolitical tensions.

Beloved abbey celebrates 1,000th birthday

MOROCCO/CATHOLIC CHURCH — A major Catholic church in Kherson was destroyed on Tuesday, local officials in the southern city of Kherson said.

Kherson, a key port on the Black Sea, has been the focus of intense fighting between Russian forces and pro-Ukrainian separatists for months.

The Russian bombing of the church, located near a residential area, was one of several attacks carried out by Russian forces in Kherson in recent days.
Oklahoma board approves state-funded religious school

By AL HIEPING in New York

An Oklahoma state board has approved what would be the coun-
ty's first tax-funded, religious charter school, according to a legal chal-
lege against such schools and a church-state separation group.

The board agreed Wednesday to award a charter for the rocking,
which is a private school that would offer a K-12 curriculum focused on
the teachings of Christianity.

The charter would allow the school to open as early as fall 2023.

The move comes as a growing number of states have been approv-
ing charter schools in recent years.

In Oklahoma, the charter is the latest development in a long line of
litigation over the state's use of public funds for religious education.

The state's charter schools are monitored by the state's education dep-
rartment and are subject to the same standards as public schools.

The decision was a victory for the group that filed the lawsuit, the
American Civil Liberties Union of Oklahoma.

The group argued that the charter school would violate the state's ban
on public funding for religious education.

The charter school's proponents argued that the school would be
operated by a Christian organization and that the charter would allow
the school to operate as a public school.

The decision in Oklahoma is likely to set a precedent for other states
that are considering charter schools.

Meanwhile, the charter school's supporters say they plan to appeal the
decision to a higher court.

As the charter school enters the legal fray, the issue of religious edu-
cation in public schools continues to be a divisive issue in the U.S.

Protesters counter Maricopa County Sheriff's deputies at the Maricopa County Courthouse on Thursday in Phoenix. Arizona authorities were under
pressure to bring charges against a white woman who killed Afric'an
American George Floyd, a 39-year-old man, and his black neighbor, on
four recent days, as they navigated Floyd's family's stand your ground provision that provides considerable leverage to the suspect in making a valid defense.

Africa mulls alternatives to US dollar

Experts meet single payment system within continent to facilitate trading

By ERIK HUTEY'S in Abuja

A question on whether African countries should shift the United States
and dollar as the dominant currency, and how to create a continent-
al single currency, continues to weld against the dollar and weaken the cost of liv-
ing, has received mixed reactions from both the heads of state and the
private sector.

If the dollar is dropped, it would be a good decision for African Payments
Network, said trails, noting the dollar's sta-

African countries should resort to one another for the sake of their
foreign policy goals.

The African Export-Import Bank said the continent is ready to achieve
at the "dollar-denting" moment.

According to sources, the only reason why the African continent could not
change the single currency system is to follow the trends and worries
among African countries.

"All our businessmen and trad-

ers are looking more and more
for payments and services from
African banks because of the cer-
tainties in currencies. In these
cases, we are all subjected to a
dollar," said trails.

As result of the dollar short-
cages in Africa, the African Ex-
port-Import Bank and other continen-
tal payment systems indicate that the Pan-

African and other African-centric
systems should be preferred.

The decision by the US authori-

ties to drop the dollar, which also the Europeans appear to take
a similar path, would have a signifi-
cantly profound impact on the Af-
rican economy.

The scenario could make it difficult for African countries to
secure trade.

"We have already witnessed difficulty in getting goods from the US, which
left from September to January,

Pence's support for DeSantis is appealing to Republican voters, who
are more likely to choose him as the nominee in 2024, and would
be appealing to Republicans in the state of Florida, where DeSantis
delivered a speech earlier this year.

U.S. President Donald Trump said he would not run for president in 2024,

Meanwhile, the Trump campaign has not confirmed whether Pence will
run for president in 2024.

Pence's rise to the vice presidency was driven in part by his support for
Trump's policies, including his management of the coronavirus pandemic.

However, Pence has also been criticized for his handling of the pandemic,
and some Republicans have called for him to step down.

Pence has maintained that the U.S. has made significant progress in
controlling the virus, and that the country is now in a better position
to respond to future crises.

The announcement comes as the Biden administration prepares to
transition power to the incoming administration.

Pence's departure would set the stage for a potential Biden administration
transition, which would include key appointments to positions in the
government.

As the 2024 election approaches, Pence's career is likely to be
closely watched, as he continues to be considered as a potential
candidate for the Republican nomination.

---

US ex-VP Pence to seek GOP nomination, to face Trump

By AL HIEPING in New York

Former US vice president Mike Pence—the Oval Office deputy to Don-
ald Trump who ended up not to be a vice presidential nominee in 2020—
is poised to formally announce his candidacy for the 2024 Republican pri-
mary.

Pence is expected to make the announcement on Monday in South Carolina, a state that is crucial for the Republican nomination process.

Pence has been seen as a potential candidate for the Republican nomina-
tion in recent months, and his decision to run for the White House
would be seen as a challenge to Donald Trump, who is expected to
announce his candidacy in the near future.

Pence's announcement comes as Trump is expected to face a tough challenge from several Republican candidates in the 2024 primaries.

Pence has been seen as a more moderate candidate than Trump, and
his appeal to moderate Republicans could give him an advantage in the
c-primary race.

Pence has been an outspoken critic of Trump's handling of the
pandemic and his response to the January 6 attack on the US Capitol.

Pence's reputation has been, however, damaged by his decision to
refuse to overturn the 2020 election results.

Pence has also been criticized for his role in the Trump administration's
response to the pandemic, which many saw as inadequate and contribu-
ting to the high number of deaths.

In recent weeks, Pence has been seen as a potential candidate for the
Republican nomination, and his decision to run would be seen as a
sign that he is serious about making a run for the White House.
Apple unveils new generation of its AR headset

By ZHANG WEI and YU ZHIHUI

Apple officially entered into the AR market with its new headset on May 30 and announced that it will launch a new generation of AR products in the second half of this year.

The new generation of AR products includes a new high-definition camera, 3D spatial sound, and an advanced computing system. Apple also introduced new software capabilities and applications.

The headset will feature an updated chip and improved cameras, offering users a more immersive AR experience.

Apple CEO Tim Cook said that the new headset represents a new era of AR technology, enabling users to access a wide range of applications and applications.

The company also announced a new software development program for developers, with support for 3D and augmented reality applications.

Apple's entry into the AR market is seen as a significant step towards expanding its ecosystem and strengthening its position in the technology industry.

CRRC marks historic achievement with Argentina light rail train order

By ZHANG WU and LIU ZHONGHUA

CRRC's new generation of light rail trains have reached Argentina, marking a breakthrough in international rail transport cooperation.

The new generation of trains are designed for the local market, with a capacity of 1,500 passengers and a maximum speed of 80 km/h. They feature advanced technology and are expected to improve the transportation services in Argentina.

This marks the first time that CRRC's new generation of trains have been exported to a foreign country, solidifying its position as a leader in the global rail transport market.

 SwiftUI game changer

Apple today announced that its new game development framework, SwiftUI, is now available to all developers.

SwiftUI is a declarative framework for building user interfaces, allowing developers to create complex and dynamic interfaces with ease.

Apple's decision to make SwiftUI available to all developers is a significant step towards democratizing app development and opening up new opportunities for creators.

 SwiftUI is already being used by major companies such as Airbnb and Slack, and is expected to become a dominant framework in the app development industry.

Qili shipping cancer drug to US

By ZHENG WEN and LIU ZHIHUI

Qili, a China-based biopharmaceutical company, has shipped a new cancer drug to the US.

The drug, a targeted therapy for metastatic colorectal cancer, was shipped to the US this week and is expected to be used in clinical trials.

This marks the first time that a Chinese drug has been exported to the US, highlighting Qili's efforts to expand its global footprint.

Qili's drug is a small-molecule inhibitor of EGFR, a key target in the treatment of colorectal cancer.

The US Food and Drug Administration (FDA) has approved the drug for treatment of metastatic colorectal cancer.

This is a significant achievement for Qili, as it marks the first time that a Chinese company has gained approval from the FDA for a drug.

The success of this drug highlights the potential of China's biopharmaceutical industry and the growing interest of foreign markets in Chinese products.
Swire bullish on mainland biz

Commercial developer sees 'huge potential' in market, to scale up investment

BY YANG KEJU
sean@chinadaily.com.cn

Swire Properties, a Hong Kong-based commercial and retail developer, will scale up its mainland operations, as its strong momentum in the region, has shown up in its most recent results.

The company said it will focus on better meeting the growing needs of local consumers in the region.

The company plans to double its gross floor area on the Chinese mainland over the next decade, targeted to be reached in 2028, an annual 3% to 4% increase above today's level, it also said, to develop retail-commercial investments in five key emerging first-tier cities, said Tim Black, Swire's chief operating officer in an interview with China Daily.

"We see huge market potential in the region, with rising local incomes and the growth of the high-net-worth group," he said.

The company, which is not only building new buildings, but also redeveloping old ones, is experiencing a "great surge" in the market, he said.

The growth is driven, in part, by the economic recovery following the pandemic, he said.

The company's chairman, Louis Charles Swire, also said at the annual general meeting held in Hong Kong on Wednesday that the company would continue to focus on the mainland market.

"This is a huge opportunity for us," he said.

The company has already launched several projects in the region, including the Shanghai Swire Plaza, the Shenzhen Swire Plaza and the Chengdu Swire Plaza.

"We are confident that the Chinese market will continue to be strong, and we are looking forward to the future of the region," he said.

Swire Properties, which is a subsidiary of Swire Pacific, a well-known developer in Hong Kong, said it will continue to focus on the mainland market in the future.

"We have a strong presence in the region, and we see a lot of opportunities for growth," he said.

Swire Properties, which is one of the largest developers in Hong Kong, said it will continue to focus on the mainland market in the future.

"We have a strong presence in the region, and we see a lot of opportunities for growth," he said.

ClearTV joins forces with SOEs to seek additional overseas biz opportunities

By LI WEIKEN

As numerous large-scale infrastructure projects involved in the Belt and Road initiative make progress, an increasing number of smaller-scale projects led by leading companies that focus on niche markets have also become a major driver of China’s infrastructure projects. ClearTV, also known as a Ginkgo Technology Group, is a leading provider specializing in cloud computing, information and communication technology services. The company’s main business is to provide cloud platforms and associated services.

ClearTV has been involved in a number of large-scale projects across the globe, including the Belt and Road Initiative and other similar projects. The company has been actively seeking new opportunities in the global market, seeking to expand its business in various regions.

Through supplying SOEs that have been involved in implementing ClearTV’s projects, the company has made significant progress in expanding its footprint in the global market. ClearTV has been able to leverage its expertise in cloud computing and information technology to secure numerous contracts and establish partnerships with various companies.

In addition to the Belt and Road Initiative, ClearTV has also actively sought opportunities in other regions, including Southeast Asia, Africa, and South America. The company has successfully implemented a number of projects in these regions, showcasing its ability to work with different partners and adapt to varying market conditions.

ClearTV’s success in securing a number of contracts with SOEs highlights its ability to deliver high-quality services and expertise in the field of cloud computing and information technology. The company’s continued efforts to expand its business in various regions demonstrate its commitment to leveraging its expertise to meet the growing demand for cloud computing and information technology services globally.
As Washington's puppet, Tokyo is betraying the role its has assumed for East Asia's integration

I n his speech at a seminar held by Japan's Association for the Promotion of International Cooperation, UN ambassador to Japan, said the Japanese government's decision to nationalize its semiconductor manufacturing equipment, to its list of regional leadership.

Japan risks not losing the huge Chinese market, but also missing out its economic credit and its influence by limiting its cooperation with China in the semiconductor field. Japan is hurting itself as well as China. The US-China rivalry is characterized by Hithophyl politics,

By doing so, it is like the person in the Chinese fable that was eaten by a tiger but then as a ghost helped the tiger to do the hunting. Believing that the Japanese semiconductor industry explicitly proposed by President Trum, Japan's high-end manufacturing plant threaten the technological hegemony and economic interests of the US. Washington launched a "semiconductor war" against Japan's high-tech sector in the 1980s, employing sanctions, threats, and other measures to do it.

Today Washington pressed to sign the semiconductor agreement in 1984 that enabled the US to reduce Japanese market share and reclaim the world's top position.

For 40 years, Japan has been a firm supporter of China's reform and opening up process and has benefited much from China's modernization and prosperity. Today, there are more than 3,000 Japanese enterprises in China that generate trade revenue of more than $500 billion a year.

That's why several Japanese business associations and companies expressed their concern to the Japanese government before the controls were officially adopted on this policy.

The Japanese government has on more than one occasion expressed its willingness to propel East Asia Integration and the building of an East Asian community, but now how is it doing when it is letting others help Beijing achieving East Asia's interests for the US? The US has become the biggest factor affecting the stable development of Japan-China relations. Japan has overplayed, and its largest export restriction, is to actively cooperate with Washington.

To be a good neighbor is a much better choice than to be a ghostly-minded fox for a tiger.

Opinion Line

Enduring partnership of China and France

U sing his phone talk with Emmanuel Macron, French President Emmanuel Macron, who is the one to make greater efforts to "try to implement" the consensus the two countries leaders had reached.

Praising President Macron's recent statements on European and Franco-German representation that an increasing number of European countries are "more actively" coming into dialogue and contact with China, Wang highlighted a shared internationalist image.

At two major forums in the preceding that goal, Wang said, China and Europe should think of each other more as cooperative partners, less as rivals. He also appealed for "constructive actions" by developed countries to support the development of the Group of 20, of which he said China is a member.

As a firm believer of "hands of state diplomacy", Beijing has been putting an answering definition to reaching strategic-level agreements with leaders of developed countries and played a visible lead in the world.

With the US-China trade war and the ongoing changes in the global political and economic landscape, the bilateral strategic-level cooperation is increasingly becoming a strategic-level consensus into real-world policy cooperation.

For France, the two sides can solve problems by cooperation, which is not only in their favor, but also in favor of the world.

When it comes to relations with the United States, for France, Beijing prefers to adopted a position of broadening cooperation by reasserting that Washington has constantly eaten its words on stabilizing the volatile bilaterals. The US and European and US officials have made common causes over the matter, Chinese officials have reassured, and Beijing has said that the two sides need to "implement the consensus the two leaders had reached during their informal talks in Bali, Indonesia" on properly managing bilateral trade and economic relations.

The frequent high-level visits of China's leaders to Europe. China's relations with the European Union and individual European countries have improved. This is mainly attributed to the "overcoming the obstacles" personal effort and resolve of the two sides in "vowing the talk, not walking the walk."

In the context of the Belt and Road Initiative, a major China's foreign policy initiative, the question is how exactly in these eyes and their respective countries, personal information such as e-mail addresses, phone numbers, and social security numbers?

To cut off the class of such threats, we need to strictly monitor those publishing such data and plug as many leaks as possible.

In recent years, there have been many reports of illegal hacks, leaking and using personal information, especially if the data is addressed at the root.

The EU and US need to we do need to do more deeply into the data breaches, contribute to make sure that the personal and financial security of citizens. The selected欧美 countries preserve the necessary of personal data.

By insisting on cooperative governance across the entire chain, cracking down each step of the "thief-catch thief concert process", we can better ensure protection of personal information security.

Privacy protection is not only a matter for celebrities but also key factors that impact business and IT innovation. EU's efforts in illegal activities are already showing results. The EU has created a "broken window effect" in a way that if the "stolen" data is not properly managed, it will send a clear signal of security among other countries.

It is hoped that the authorities will have to work together and make sure that the seriousness they deserve. This will serve as a deterrent and establish robust rules and legal safeguards for personal data.

Strong case for protecting personal info

COMMMENT

Resilient water, power supply needed

The impacts of climate change are becoming increasingly severe and widespread, with water and energy security receiving more attention. And many parts of China, polluted by haze at the beginning of the year, will be hit by heavy rains and floods this week.

Located in the Yellow River region, the impacts of climate change and extreme weather conditions have been experienced in the region for more than 60 years, resulting in severe water shortage in the mid-lower reaches of the river and disruptive water and electricity supplies.

Since the beginning of this summer, too many parts across China and regions have experienced unusual weather phenomena, and local droughts or drought-like conditions in some areas, lasting for several weeks, and its impact on water and electricity supplies.

Water scarcity caused by drought is becoming a common water resources and water ecology. And, along with the water scarcity problems, the wildfires caused by weather-related disasters and environmental shifts has become a systemic challenge of complex, urgent, difficult, environmentally, and water-related national water safety.

China has made significant progress in this direction in recent years. Water supply and quality of the river and lake ecosystems have greatly improved, with green and safe water supply systems becoming more efficient and reliable. Yet it is still necessary to further improve China’s water supply infrastructure to make it more resilient to climate change.

Drought and extreme heat affect hydroelectric power generation. However, this time the scale of the Puxian Five-Year Plan (2020-2025) storage capacity of capacity has been continuously expanding, while the demand-side energy regulation has improved and the power system has become more resilient to extreme weather events.

Despite that, various measures need to be taken to ensure regular power supply and sustainable power generation. My team has already changed the load by power production and wind power generation is affected by climate change. This means that demand increases during extremely hot days.

Also, prediction of renewable energy, mainly wind power, is highly uncertain, which means that demand is likely to increase at a faster rate than power production. And, a significant proportion of wind power will be generated and stored in the system.

In 2021, China produced 1.38 trillion kWh of hydropower and 1.2 trillion kilowatt-hours of wind and solar power, with total generation changing with hydroelectric power and wind power.

Besides, in this first quarter of this year, China’s installed capacity of renewable energy, including hydro power, wind power, and solar power, reached 2.55 billion kw.

And in the future, the installed capacity could exceed 3.5 billion kw.

In the last five years for flooding, the CPC has always adhered to its original mission of serving the people and realizing the rejuvenation of the

There is also a need to implement policies that support the use of these renewable resources to meet the power demand through methods such as load aggregators or virtual power plants.

Also, support policies should be committed to local grid systems, incremental consultation policies, micro-grid, is also necessary to realize the capability to meet any crisis in power demand with significant differences by peak and off-peak electricity loads.

Moreover, such efforts should be combined with measures such as auxiliary service market participation and the capability to share controllable resources into a larger scale within the power grid.

The author is a senior counselor and researcher at the Institute of Energy Research, Academy of Macroeconomics Research. The views don’t necessarily reflect those of China Daily.

Harmony epitomizes Chinese modernization

China has experienced many ups and downs, and China is developing under the leadership of the Communist Party of China, an incomparable, remarkable achievement, especially since the implementation of reform and opening-up more than four decades ago. And all these experiences and achievements have attracted great interest to social and economic development.

In fact, China has been making efforts to achieve economic engagement, rich and poor, rural and urban living standards of the entire country in a bid to build a truly prosperous society.

As part of its strategy to build a harmonious society and modern China, China has been achieving socialism with Chinese characteristics. The modernization process has been linked with social and cultural harmony. But for China, modernization also means rapid urbanization, industrialization, and the development of cities and towns, which can increase social and cultural conflicts and disruptions.

In the past five years for flooding, the CPC has always adhered to its original mission of serving the people and realizing the rejuvenation of the

And the Silk Road Fund and the Asian Infrastructure Investment Bank, which China has helped establish, have already boosted the economic development of many countries.

China, as a country with rich cultures and a rich history, has been developing office and cultural circles and is one of the world’s most vibrant countries.

As for the Belt and Road Initiative, China has negotiated trade agreements with Sri Lanka on the exchange of rice for rubber. This is the first governmental trade agreement that China signed with a country that had a different political system and with which it had no diplomatic relations at the time.

No wonder China has been introducing only resources are shared proportionately by countries on a non-commercial global scale.

The Silk Road, the Belt and Road Initiative, which China has helped launch, is offering a win-win way for countries to share prosperity by countries on a commercial scale.

As an ancient Chinese saying goes, “You can only get what you sow.” China should continue to promote the global development and help build a global community with a shared future for mankind.

The author is the president of the Belt and Road Initiative Fund. The views don’t necessarily reflect those of China Daily.

Kong Qinglong

China’s solutions to help address governance problems

In the speech he delivered at the Shanghai-Lanka Dialogue on Global Governance, China’s Special Representative for Global Security Affairs and Chinese Ambassador to Sri Lanka Li Hongzhi expressed China’s position on the issue of global governance and the need to address governance problems.

Li said that China will be more proactive in global governance and the need to address governance problems.

China will continue to promote the Belt and Road Initiative, which is the most important for countries and regions to explore a new path of global governance and the Global Security Initiative, in order to create a new path of global governance.

China will propose the GSI in response to the complex global security situation, and China will support countries in their efforts to establish a safer and more stable world.

Also, the GSI proposes that differences and disputes between countries be resolved through dialogue and consultation, and that disagreements be resolved in a peaceful and non-violent manner.

The initiative also proposes that countries adopt a holistic approach to address global security challenges, and that China will work with other countries to address the challenges faced by China.

Unilateralism, militarism, and hegemony are not acceptable, and China will support countries in their efforts to promote a new path of global governance and the Global Security Initiative.

Adhering to the principles of joint consultation, construction and sharing is essential for not only safeguarding global security, but also implementing the GSI.

The main organs of the UN, especially the Security Council, should be the inner circle for China.

The Security Council is the most responsible body for maintaining peace and security around the world.

Local governments, which can also be affected, should be responsible to manage issues in the international affairs of other countries.

The principles of the GSI, which include sovereign equality of member states, peaceful resolution of disputes, and non-interference in the internal affairs of other countries, are the same.

The principles should be observed by all states, which should be the primary responsibility of the International community.

The means not the end

Renminbi's internationalization should be instrument for the rapid growth of its foreign trade and investment and financial sector, not a goal in itself

In recent years, the renminbi's internationalization has been developed in a rapid manner. The renminbi's global payment share has increased from 0.2% in 2002, making it the fifth largest payment currency in the world. Of late, the renminbi share in global reserves has reached 7%, higher than that of the dollar. The renminbi's internationalization has been supported by a large number of countries, including the United States. The success of the renminbi in internationalization lies in the rising status of renminbi assets. At present, there are favorable conditions for China to further internationalize the renminbi.

The profitability and security of the renminbi currency has drawn many countries to abandon renminbi assets. In 2022, the 10-year sovereign bond yield of the renminbi has crossed 3.5%, higher than that of renminbi-based denominated assets such as the United States. The status of the renminbi in the global financial system is also rising. The Renminbi Internationalization Index has included the Chinese currency in the global financial system with a weight equivalent to the euro.

As China's engagement in regional and international economic cooperation develops, the renminbi's internationalization is also actively incorporated by the Belt and Road countries and regions. A comprehensive Economic Partnership has been established between China and the non-China member countries of the Belt and Road, the cross-border renminbi payment systems between China and non-China members involved in the Belt and Road Initiative reached 5.43 trillion yuan (807.95 billion euros), accounting for 18.8% of the total cross-border use of the renminbi (in the same period). By the end of 2022, China has signed renminbi swap agreements with 27 belt and road countries and connected regions, and bilateral renminbi clearing arrangements in eight countries involved in the initiative. The rise of China's comprehensive economic power and the rapid growth of its foreign trade and investment have furthered internationalization of the renminbi. However, at present, against the strong position of the US dollar, the internationalization of domestic financial markets and the renminbi offshore market, the cross-border renminbi payment and pricing functions, as well as the complex international environment, the further internationalization of the Chinese currency faces some challenges.

First, global dependence has made it difficult to shake the US dollar's position. At present, the US dollar has an absolute dominance in global foreign exchange reserves, cross-border settlement and pricing, while the renminbi is much less dependent. At the end of 2022, the share of the Chinese currency in global foreign exchange reserves was much lower than that in the IMF's SDR basket. Although the renminbi's global pricing and settlement market share is relatively weak, the share of renminbi in global foreign exchange reserves is not necessarily proportional with China's position in global trade. In 2022, in terms of trade and investment, China overtook the US to become the world's largest exporter, while its renminbi reserves were much smaller than those of the US.

Second, the difficulty in opening international payment systems. The national supply of renminbi is mainly through foreign exchange, as the renminbi is still not recognized as a legal tender in foreign countries. Faced with the renminbi's weak internationalization in the international financial and trade system, it is difficult to develop domestic and offshore financial markets, and whether the financial system can be more sound and reliable in international markets. To advance the renminbi internationalization, it is necessary to make a good institutional design and offer policy support, encourage market entities to use the renminbi for settlement and valuation in foreign trade and investment, and further improve cross-border investment and financing, and transaction settlement.

The renminbi's internationalization is not mature or open enough. Its stock market and stock derivatives markets are still underdeveloped, with limited varieties of bond products and frequent bond default incidents. The issuance of the renminbi internationalization will be accompanied by many risks, including leverage and short-term capital flows, which can further enhance the renminbi's internationalization. At the same time, industrial policies should be coordinated to enhance Chinese enterprises' status in the supply and industry chains, and thereby promote the renminbi's internationalization. Additionally, the renminbi offshore market should be further developed.

Efforts should be made to promote the development and opening up of the domestic financial market, expand domestic financial market, enrich financial products, explore investment and financing mechanisms, and improve the liquidity of the financial market. China should also encourage cross-border renminbi trade and investment, and improve the regulation of renminbi market. In the meantime, the renminbi internationalization is the linkage between the renminbi renminbi and international markets, the former has more closed, and the cross-border flows of international capital will be more frequent. This requires the efficient capital management system to adjust to the capital configurations, improving the ability to detect and analyze the risks of cross-currency flows to give early-warning and respond to short-term capital flows, and maintain the bottom line of avoiding systemic risks.

The renminbi's internationalization requires the efforts of China, the United States and other global financial centers to establish the principles of the market and internationalization. Only then can it be avoided to become an instrument, not a goal, to promote international financial stability and strengthen planning on environmental and economic development. However, the renminbi's internationalization is still the status of regionalization.

Aerial sports whale was found stranded on a beach in Sandakan, Sabah, Malaysia, in February this year. The 16-year-old male short-finned pilot whale got stuck in the shallow waters. It started making noise, and there was nothing done to help it or how it could be rescued.

The aerial footage afterward found a large amount of garbage in the whale's stomach, which, according to Wang, keep it from digesting and feeling pain. The whale was also found to be pregnant, making it even more painful, even if impossible.

"Sadly, it wasn't a successful rescue. But it made for the chance to learn. Short-finned pilot whales are dying to machine-guns," added the 16-year-old whale's love, the Story of the Blue Whale XQZ.

The United States has designated June as the month of every year as World Oceans Day to raise awareness of ocean protection.

"With 20 percent of big fish populations depleted, and 30 percent of coral reefs destroyed, we are mining the oceans that can no longer be renewable!" warned the US site. "We need to work together to create a new balance with the ocean that no longer depletes humanity but instead restores its "blue" and brings it new life!"

While the same applies to rain, Wang founded Better Blue in 2017. As of December 2019, the organization has rescued 1,000 volunteers from over 30 cities across China. They have collected more than 6,000 hours of service protecting the oceans, including over 45 tons of marine debris.

According to Wang, these volunteers, as well as a majority of Better Blue's management staff are a young group. Part of the reason is that Better Blue encourages members to drive, and scuba diving is a rather young sport in China.

Chongqing's global fame
A video of Chongqing in China, created by vlogger @hummer, has become a hit on TikTok, garnering 1.4 billion views worldwide to date. The video captured scenes from Fuling, a square, which appears to be on the first floor but is actually on the 23rd floor, almost instantly brought China's architectural design, referring to it as the "Dead City." Responding to this omission, Guanlin, a former video and video Changping is a phenomenon in urban area, with a rich cultural heritage, vibrant nightlife, and 24-hour live shows everywhere. The video has been criticized that China is not in fact a female city, and the media has nothing to worry about harassment or uneven attention.

Surprised to see so much overly touristy before their eyes, many native-worldwide

Liu Xuanlei (left) places her hand on a dolphin, which has long been a symbol of happiness in China, including Zhuhai, in this photo from her "Blue Eyes."

Ngoc Lan, an 86-year-old vlogger, in this photo for her documentary-dressing videos, "Say goodbye to plastic!"

They don’t see themselves as residents of a certain city, but of the planet. They are all one, humanity as one and support the idea of coexisting with nature and other creatures. They are the ones taking action when it comes to environmental protection and battling climate change.

Wang Ming, director of the Better Blue NGO

Creating change
For people who live in inland areas, the ocean may seem a far-off place physically and, therefore, must not make the impact their daily life choices could have on the ocean. This is also what Liu Xuanlei has attempted to do in her life. She is the first person in the World Ocean Day trip to Tampak, Malaysia, a stop of being a marine biologist, to help protect marine protection an area close to where her family lives.

Liu, too, has been an volunteer at Better Blue since the very beginning in 2017. Specializing in their own development and work with internships for NGOs like Blue Planet, Liu has traveled to many international events to raise public awareness about the plight of the ocean and how to help protect it. She has personally adopted to scuba or to sponsor an ocean creature.

"With ocean adoption sometimes visit the ocean creatures, like a friend with their own name tag," said Liu, "it's time to do something that is the whole area of the ocean, and more people are actually participating in ocean protection. I hope this will be the future of the ocean."
Wave of innovation shows a world of wonder

Author inspired by creativity behind deep-sea submarines technology and the wonders it reveals, Yang Yang reports.

The resources on land are limited. Humans have to explore the ocean, which accounts for 71 percent of the surface of our planet, and make use of it — perhaps in the future, even find a way to live in it, due to the explosive growth in the global population.

Gao Zhongtian, writer

For centuries, the Ding Kiln in today’s Quyang county, North China’s Hebei province, produced white porcelain that was considered one of ancient China’s “four great kilns.”

The traditional technique of the Ding Kiln is featured in the National Symphony Orchestra’s 2008 concert, which was supposed to be “never ended” and “never be forgotten.”

One of the most prized works from the dynasty is the baby-shaped pillow in ivory-white porcelain, known as “shui zhen” or “shui zhen yong,” which is about 18 centimeters tall, 5 cm long and 11.8 cm wide.

It is one of the national treasures housed at the Palace Museum in Beijing.

The porcelian pillow-pastry is a fruit of the kingdom, in which is patterned with flowers and birds, imprinting ministrations. The baby’s back is where people rest their heads.

The pillow has become the theme of a homegrown dance drama production that will be premiered in 2014, and followed by 120 shows above the country, the China Central TV Drama Group announced in Beijing on May 21.

“The new dance drama will highlight traditional cultural elements from the Song Dynasty (960-1279) and pillow will play a major inspiration” say Jin Xiaoyong, head of the company. “The Ding Kilns and their porcelain-filling technique will be introduced to the audience.”

Jin adds that the company has produced and staged the dance drama, “Pillow: Dreams,” the Journey of a Legendary Landscape Painting, which has been shown.

As the premiere in Beijing in 2010, the musical, which was inspired by a poem of the Tang Dynasty, written by the poet Wang Bao, was performed by the leading opera artist Wang Xingchao. He has sent his performances to 120 countries and regions.

“The success of both the ‘Dreams’ and ‘Pillow: Dreams’ has inspired us to explore the potential of dance drama on traditional cultural elements,” Wang says.

“Ten years back made the approach drama to our country, which went to the nation to make us know dance drama based on traditional cultural elements.”

Drain, a poetic word in Chinese, which means “oblivion,” was presented in Beijing, and the two premieres attracted millions of people.

Recently, from Beijing to Shanghai, to even的动作 are working on communication networks which can facilitate accurate positioning of submarines in the deep sea, Gao says.

Another goal is to improve the submarines’ capabilities to conduct scientific exploration and stay longer underwater. Currently, Ferdinand can stay six hours in the Mediterranean, Gao says.

Besides, Chinese scientists hope to create larger structures as to carry out research on the ocean environment for comprehensive scientific vessels with a longer living environment.

While writing the book, Gao was once invited to the “Bianzhong” which was founded by the “Bianzhong” artists on the sea bed. They are basically volunteers, supplementing the wealth as they discharge their duties, because the “Bianzhong” was initiated in 2000.

It was also deeply impressed by the concept of “Wang Pintang.”

According to his innovation, the Palace Museum in Beijing, periodicals objects from Ding Kiln has been held. The reason of being “Wang” is paper, while adding “Ping” in 2000 she found just like a fitting technique was used as an art form on national treasure cultural heritage.

The ceramic collection at the Palace Museum in Beijing is huge and includes a wide range of varieties, allowing people to see and understand a continuous development of the artifacts.

Among the major treasures, “shui zhen” is one of the basis-known pieces of art, which displays the essence of ancient Chinese aesthetics.

There are three original ceramic baby-shaped pillows made with the Ding Kiln porcelain-filling technique in existence in China now, Lyudao | a local at the Palace Museum in Beijing and the other two in Siping Palace Museum.

Chinese ceramics spread to the rest of the world and inspired local styles of porcelain in many South East Asian countries, and the Chinese artists have decoded the secrets of the Ding Kilns, and most modern works want to keep the traditional technique alive.

The company also announced another exploration, a video-sharing site, Bilibili, which launches a series of Chinese cultural programs and young people to launch an online recruitment for fortunes of the drama.

Two popular influences on Sili’s “Dreams” are Jingdezhen dance drama, Zan, who has been involved in the performance as a producer, and Shi Di Qiang, who has a famous following.

“Zan, who is a graduate of the Central Drama Academy, is considered to be one of the most popular cultural platforms for young people to launch an online recruitment for fortunes of the drama.”

The Chinese Oriental Performing Arts Group also announced that it will launch its first reality show with working with Jiangsu TV and Xinhua Video in July, featuring dancing from dance schools around the country, as part of its effort on recruiting dancers for the dance drama.

The Chinese Oriental Performing Arts Group also announced that it will launch its first reality show with working with Jiangsu TV and Xinhua Video in July, featuring dancing from dance schools around the country, as part of its effort on recruiting dancers for the dance drama.
Where chance meets ambition

Xiao Xin’s gaokao score takes him on an unexpected path across the world, Wang Xingwei reports.

Chances can come in many forms. For a student from rural Xinjiang, a high score in the Chinese national high school examination (gaokao) opened the door to a range of opportunities.

As the Chinese saying goes, those who refuse to take the easy path will succeed; those who only challenge themselves in their comfort zones will fail. Xiao Xin identified his path on his English, returning to a university schedule just like the one of high school.

“Every day, I would read words and read texts to develop a good sense of the English language,” recalled Xiao. After about a month, he was more or less used to the English communication environment in Pakistan. Then, he even started to get a group of Pakistan’s national language, Urdu, in order to better communicate with the locals.

“The project is not only about energy and economic cooperation but also about people-to-people exchanges, especially among young people,” he said.

With such an experience, Xiao and his young team from China, whose average age was 30 at that time, conquered the power project in less than three years. The working experience would eventually lead to Xiao’s understanding of the term “infrastructure giant” — a nickname that everyone gave to China, especially when referring to the country’s infrastructure projects.

“Everyone has to see an enormous famous ‘infrastructure giant’ and feel at ease with it and share the same goal. The local people will work seriously with their hardworking spirit, actively promoting the project,” Xiao said.

Since the first time Pakistan power plant began full operation in 2016, Xiao, as a front-line staff member, saw firsthand what the power plant means for local people.

He said that only years ago, power outage often resulted in factory or production shutdown. But now, this new power plant helps people have access to electricity around the clock.

“People can lawyer life at home without worrying about damaging the country due to frequent power outages.” Xiao said, “All my local colleagues are so proud of working in the plant.”

Xiao, who has been working with different cultural backgrounds, said, “And I have also grown to know how the Beid and Road Initiative works, which makes me very proud of China.”

Traveling by bicycle was actually much less expensive than I thought. In total, I only spent 15,000 yuan (2,100) on food, lodging and experiences while gone for three months. Additionally, I would help support a local charity, the United Foundation for China’s Orphans.

By the end of my journey, I wanted to keep going. I felt like I could never stop. If anyone has an interest in traveling, I would highly recommend going by bicycle!
