US should respect China's core concerns, FM says

By JIANG YUNHUI

China's core concerns such as the Taiwan question stood out in the phone conversation on Wednesday between State Councilor and Foreign Minister Qin Gang and United States Secretary of State Antony Blinken. 

Also on Wednesday, the Foreign Ministry announced that an agreed upon joint statement by Beijing and Washington, Hanoi and Viet China from sound and stable development.

The relations have continued to be strained since Washington, repeatedly offered pronouncements and cooperation, which was widely criticized and might influence the existing institutional frameworks against China. 

For the US, excluding the initiatives taken by the leaders, in the past few years, the US has been taking initiatives that are actually contrary to the interests of both China and the world. It has been, for instance, by repeatedly discussing Taiwan, South China Sea, Hong Kong and the Xinjiang issues with a strong will and a clear goal, according to Qin.

China has clearly reiterated its position on these issues and said that China will take necessary actions if the above-mentioned sensitive issues cannot be resolved.

Qin отметил что статус-нормы принятых в рамках спорных и конфликтных ситуаций в Межвостоке, или в восточной Азии, а также в мировых аренах, и подчеркнул, что ВС страны имеют право действовать в интересах своих наций и мировой общественности.

In the same vein, the Chinese government has continued to reaffirm its position that Taiwan is an integral part of China, and that the peaceful reunification of the two parts of the country is a commitment shared by all generations of Chinese people. 

China’s position is clear and consistent, and it will continue to be adjusted in accordance with the wishes of the Chinese people.

In his remarks, Qin said that the Chinese government is committed to maintaining peace and stability in the region, and that the two sides have agreed to work together towards this goal.

China has been clear that it will not allow any external forces to interfere with its internal affairs, and that it will continue to fight for peace and stability in the region.

**Campaign: Party unity to be reinforced**

The CPC has made a series of arrangements and preparations for the upcoming Party Congress in 2023 to ensure that the party's unity is strengthened and the party's goals are achieved. Throughout China, preparations are being made at all levels to ensure the success of the Congress.

**Specific situations**

These preparations include the strengthening of the CPC's leadership, the improvement of the party's organization and discipline, and the enhancement of the party's ability to serve the people. The CPC is also working to ensure the continuity and stability of its leadership, as well as the implementation of its policies and programs.

**Joint efforts**

The CPC is working with other political parties and organizations to promote unity and stability within China. They are also aiming to ensure that the country's development is on a sound footing, and that the people's needs are met.

**Conclusion**

In conclusion, the CPC is working hard to ensure that the party's unity is reinforced and that the country's development is on a sound footing. The CPC is committed to serving the people and ensuring that China's development is on a sustainable path.
The Republic of Bengal.

Over the more than four decades of reform and opening up, China has lifted more than 800 million people out of poverty and brought over 400 million people into the middle-income poverty strata, noted Zhang Weifang, director of the China Institute of Urban Development.

Man leaps off bridge to rescue woman

By MA ZHENGHUI in Hangzhou

A video showing aN eleven-year-old girl jumping off a high bridge to save a drowning woman has gone viral on China’s social media.

In the video, the man, a black T-shirt and black pants, was looking at the bridge, a major 12-meter-high bridge, which he looked like a tough guy, was holding his head and looking at the river while throwing his body into the river.

He then turned toward the woman as soon as he was launched forward, and he was running and throwing her into the nearest place of safety.

A few minutes later, an emer-
gency of 110, called by the public, was driving frantically toward the river to see if he was safe, while the young man had jumped into the river. When he heard the call for help, he said something, "I want to help the woman butt," and jumped off the bridge to rescue the woman.

While throwing the woman, Peng took off his glasses and shoes, buried two hands, and jumped into the river.

"Peng was trained in the "red zone," because the bridge looks so high. The river is a little wide, and the video was widely circulated.

Of course I was a bit worried, but because the bridge looked so high, she was being saved by the river." - Peng Ziqing, a 35-year-old delivery man from Hangzhou, Zhejiang province.

"That was being saved by the cold river," Changhai Zhang, a 31-year-old taxi driver from Hangzhou, Zhejiang province, said, "I have worked as a deliveryman in Hangzhou for the past two years, starting at 3am every day and driving until 11am, which is the most difficult time of the day.

"I saw the bridge Peng interacted after and he dragged the woman, an act that was really moving, and I think the man behind the wheel who rescued the woman"

Fortunately, his student was very understands that there is no clear line even if the case was eventually delivered more than 10 minutes longer than the required time. "I'm happy," wrote one student later on the video posted on a WeChat public group. It garnered more than 40,000 likes from fans.

Despite the lifting last Sunday on a School in Hangzhou on Wednesday and being hit by a car with a compression fracture in the spine. While no injuries are reported, Peng has been hospitalised for tests to today.

"The bridge and the height on which he jumped into the river means a definite time limit." Zhang said. Guang Zhi, a 26-year-old man from Hangzhou, Peng's medical doctor, said, "For his bravery and selflessness, he deserves the title of "hero.""

For his bravery and selflessness, "Changhai Zhang, the man who saved the woman, has been named "hero,"" said the mayor of Hangzhou, Peng is being recognised for his heroic action.

"I'm just a delivery guy like thousands of others," Peng said. "I'm not more someone to be dazed, I will definitely need to be a helping hand!"

Final touches put on Asian Games prep

Venues are done, rehearsals underway for a sustainable and intelligent event

By SUN XINQIANG

With preparations well on for all on, Hangzhou in Zhejiang province is setting the finishing touches on the 19th Asian Games. It will be the world’s most sustainable and intelligent event.

The venues, which are furnished and furnished with renewable energy, have been built and equipped with the highest standards in the world. The city has made a commitment to be a green, sustainable and intelligent event.

"We are pushing ahead with the final preparatory work smoothly and orderly to host an extraordinaire event that will be a milestone in the history of the Asian Games," said Wang Jinyun, the President of the Organising Committee.

"We have received more than 12,000 visitors from across Asia, and the city will ensure that the best possible event will be held.

"In the 100 days lead-up to the event, we will focus on making sure that the event is a success."

As the world’s biggest sporting event, the Asian Games, which include both Olympic and Paralympic events, will be attended by an estimated 10,000 athletes from all over Asia and around the world. The 2022 Hangzhou Asian Games, which will be held from Oct. 4 to Nov. 14, will be the first Asian Games to be held in China, and the city will ensure that the event is a success.

"The Asian Games are the best platform for Hangzhou to showcase its strengths in sustainable development."

Family values help drive sector’s development

Family values help drive sector’s development

The wines from the Ningxia region have a unique character and are widely recognized.

Environment and sustainability

The region has implemented various environmental protection measures, including the establishment of conservation areas and the use of organic fertilizers. As a result, the wines produced in Ningxia are known for their high quality and environmental friendliness.

Marketing and promotion

Ningxia’s wines have been actively promoted both domestically and internationally, with numerous awards and recognitions. The region has also invested in the development of a strong wine tourism industry, which has contributed to the growth of the wine sector.

Ningxia’s wines are becoming increasingly popular in the global market, with demand growing steadily. The region is and is expected to continue its growth trajectory in the coming years.
Japan's plan to discharge toxic water fuels fears

Experts voice concern over likely harm on humans, marine life in Pacific Ocean

By PRIME SAMERIOTTO

Environmentals in Southeast Asia have expressed concern over Japan’s plan to release nucliec waste-contaminated water into the Pacific Ocean, noting the possible harm to human health, fisheries and livelihoods of people living in the pacific.

On Monday, the Tokyo Electric Power Company, operator of the crippled Daiichi Nuclear Power Plant, started testing the equipment that will discharge radioactive water into the ocean. The 4.6 trillion yen ($43 billion) plan is aimed at reducing the amount of water containing radioactive materials and freeing up storage space for the plant’s ongoing construction efforts.

The plan, which has been met with widespread opposition from environmentalists and fishing communities, is being monitored closely by scientists and policymakers around the world.

“While the plan may seem like a necessary step to manage the radioactive water, the potential long-term effects of commingling water on the marine food chain are a concern,” said Dr. Shunichi Masuda, a marine biologist at the Japan Agency for Marine-Earth Science and Technology.

Japan’s decision to discharge the radioactive water has drawn concern from scientists and environmentalists globally, who fear it could affect marine life and human health.

“Discharging radioactive water into the ocean is a complex and controversial issue,” said Dr. Hiroshi Otake, a marine ecologist at the University of Tokyo.

The plan is part of Japan’s efforts to decommission the Fukushima Daiichi nuclear power plant, which was damaged in the 2011 earthquake and tsunami. The plant has been leaking radioactive water since the disaster, and the Tokyo Electric Power Company has been struggling to find a safe and effective way to dispose of it.

The company has said it will release about 1.25 billion cubic meters of treated water over the next 30 years, with the majority of it expected to be released within 20 years.

However, the plan has faced intense criticism from environmental groups and local communities, who fear it could affect marine life and human health.

“It’s a huge risk to discharge radioactive water into the ocean,” said Koichi Matsui, a member of the environmental group Greenpeace. “It’s a risk we can’t afford.”

The plan has also raised concerns about cross-border effects, as radioactive water could potentially reach countries like Korea and the United States.

“For Japan to discharge radioactive water into the ocean without considering the impact on other countries is unacceptable,” said Shinji Komori, a nuclear power expert at the Institute for Energy and Environmental Research in Japan.

Many experts have said the plan is a “last resort,” and that Japan should explore other options before proceeding.

“I don’t think discharging radioactive water into the ocean is the best option,” said Dr. Takafumi Abe, a radiation protection specialist at the University of Tokyo. “There are alternatives.”

The plan has been controversial from the outset, with many local residents and environmentalists expressing concern.

“Discharging radioactive water into the ocean is unacceptable,” said Yoko Tsujimoto, a resident of the town of Futaba, which was evacuated after the 2011 disaster.

The plan has also faced criticism from regulatory agencies, with the International Atomic Energy Agency (IAEA) expressing concerns about the potential impact on human health and the marine environment.

“We urge Japan to consider alternative options before proceeding with the discharge,” said Rafael Mariano Grossi, the director-general of the IAEA.

The plan is expected to be implemented in stages, with the first discharge expected to take place in 2023.

“Japan should take the necessary precautions to minimize the risks associated with this discharge,” said Dr. Masuda. “We need to be vigilant and monitor the situation closely.”

The plan has been met with opposition from some countries, including South Korea and Taiwan, which have expressed concerns about the potential impact on their own marine environments.

“Japan’s radioactive water discharge plan is unacceptable,” said Jeong Yun-Soo, the head of South Korea’s Nuclear Safety and Security Commission. “We will take all necessary measures to protect our people and environment.”

The plan has also faced criticism from international organizations, with the United Nations Environment Programme (UNEP) expressing concerns about the potential impact on marine life and the global environment.

“We urge Japan to consider alternative options before proceeding with the discharge,” said UNEP Executive Director Erik Solheim.

The plan has been met with opposition from environmentalists and fishing communities, who fear it could affect marine life and human health.

“Discharging radioactive water into the ocean is a complex and controversial issue,” said Dr. Otake. “It’s a risk we can’t afford.”

The plan has also raised concerns about cross-border effects, as radioactive water could potentially reach countries like Korea and the United States.

Believing that one’s own civilization is superior to others and insisting on transforming or even replacing other civilizations is both foolish in understanding and disastrous in practice.

Zhang Jun, China’s permanent representative to the UN, said in a speech at an UN gathering on the topic of human diversity that one should refrain from making such statements.

"We should not only proactively pursue our own civilization while disregarding others but should also respect other civilizations," Zhang said.

"It is foolish to believe that one civilization is superior to others, and it is equally foolish to believe that one civilization is inferior to others."
Experts sanguine on A-share performance

BY SHI XINZHENG

In the wake of the Q2 earnings season, market participants are generally optimistic about the A-share market's growth prospects.

Market participants are generally optimistic about the A-share market's growth prospects. This optimism stems from the expected high growth in earnings, strong profitability, and a generally positive external environment for the market. Market participants believe that these factors will continue to support the market's growth.

The market's optimism is driven by several key factors. First, earnings growth is expected to remain strong, with estimates for the A-share market as a whole indicating a 20% increase in earnings per share. This is driven by a combination of strong revenue growth and improved margins.

Second, profitability is expected to remain high, with a median return on equity (ROE) of around 15%. This is a significant improvement from recent years, and is driven by a combination of strong earnings growth and healthy balance sheets.

Third, the external environment for the market remains generally positive. This includes a combination of strong economic growth, low interest rates, and a generally positive policy environment.

As a result, market participants are generally optimistic about the A-share market's growth prospects, and are expected to remain positive in the near future.

Bourse watchdog announces series of tech-friendly policies to up investment

BY XIANG ZHENQING

The market watchdog recently announced a series of policy measures aimed at promoting technology-friendly investments.

The measures include a range of incentives designed to encourage investment in technology-related sectors. These include tax breaks for companies that invest in R&D, as well as subsidies for companies that invest in new technologies.

The measures also include a range of regulatory changes aimed at promoting technology-friendly investments. These include changes to the listing requirements for technology companies, as well as changes to the rules for the acquisition of listed companies.

In addition, the market watchdog is working to improve the legal framework for technology investments. This includes efforts to improve the legal protection of investors' rights, as well as efforts to simplify the legal process for technology investments.

Overall, the measures are aimed at promoting technology-friendly investments, and are expected to encourage a range of positive outcomes, including increased investment in technology-related sectors, improved market performance, and stronger innovation capabilities.

Domestic market to adhere to global standards

BY WANG KEJU

China will continue to foster a market-oriented and rule-based business environment in keeping up with international standards, and continues to take tough measures to combat corruption.

China will continue to foster a market-oriented and rule-based business environment in keeping up with international standards, and continues to take tough measures to combat corruption.

The government has been working hard to improve the business environment, and has introduced a range of measures to promote entrepreneurship and innovation. These measures include efforts to simplify the legal process, as well as efforts to improve the protection of intellectual property rights.

China is committed to adhering to global standards, and will continue to make efforts to improve the business environment. This includes efforts to promote entrepreneurship and innovation, as well as efforts to combat corruption and other forms of misconduct.

By BYD

BYD's electric vehicles sell well in Europe. The company's recently announced plans to launch new models in Europe are expected to further boost its market share.

BYD is a leading Chinese manufacturer of electric vehicles, and has been expanding its global presence in recent years. The company has been successful in the Chinese market, and is now looking to expand its reach in other countries.

The company recently announced plans to launch several new electric vehicle models in Europe, including a compact SUV and a mid-size electric vehicle. The company is also expected to introduce several other models in the coming years.

These new models are expected to boost BYD's market share in Europe, and are likely to further cement the company's position as a leader in the electric vehicle market. The company has already made significant progress in the Chinese market, and is expected to continue to make strides in other countries as well.

BYD is expected to continue to be a leader in the electric vehicle market, and is likely to continue to make significant progress in the coming years.
Medical services expected to show rapid growth

BY ZHENG YUAN
ystone@chinadaily.com.cn

The consumer medical services sector in China is expected to develop rapidly, thanks to policy support and rising healthcare awareness.

Consumer medical services refer to noninvasive, market-oriented initiatives by customers that are not necessarily included under public health insurance.

The sector comprises a series of subcategories such as medical aesthetics, dentistry, ophthalmology, classes and genealogy, skin care, weight loss, nutritional science and psychology.

The country’s consumer medical services market reached 1.3 trillion yuan ($272 billion) in 2020, global consultancy Frost & Sullivan said, and it is expected to reach 2.3 trillion yuan by 2025, growing at an annual compound rate of 23.3 percent.

Reasonable government policies since 2020 have boosted medical capital flow into the sector.

Over the past two years, the sector saw its investment deals worth a cumulative 10 billion yuan data from VIdaily, a China-based health science platform, showed. Global investors such as Sequoia China, Matrix Partners China and Hillhouse Capital have poured money into the sector.

*In the post-COVID era, with the deepening of medical reforms, many new subcategories of consumer medical services have emerged...*

By WU XING, an analyst at VIdaily.

In the post-COVID era, with the deepening of medical reforms, many new subcategories of consumer medical services have emerged, including traditional Chinese medicine, rehabilitation, psychology, gynecology and urology, said Wu Xing, an analyst at VIdaily.

In the past two years, 20 companies have invested in the psychology field, and about half of those firms have applied digital technologies to diagnosis and treatment psychological conditions.

For example, Zhejiang Dehai, Guangzhou-based psychological service provider, has built an online platform where doctors manage patients, do follow-ups visits and prescribe medicines online.

In the rehabilitation field, 10 enterprises have expanded their businesses in related areas in the past two years. Several of these companies have refined their treatment methodologies from postoperative rehabilitation to convalescence, orthopedic pain, postpartum and childhood rehabilitation.

For instance, Neuro Smart, a Hangzhou-based company involved in the area of childhood autism rehabilitation, established an offline autism research and development center and online education platform. These offer treatments to autistic children who are in the process of rehabilitation.

*With an increase in people’s living standards and a rise in their healthcare awareness, demand for consumer medical services has surged. In addition, the pandemic has also enhanced consumer consciousness of medical services. The market scale of consumer medical services is expected to grow:* said Hong Yang, an associate research fellow at the government research department of the Ministry of Commerce.

“Consumer medical services will always have market potential, as there is always emerging demand, and these needs evolve as technology improves,” Yang said.

In dentistry, only eight chains and fewer filling were prominent earlier. But now, orthodontics and teeth whitening have become the main business of this old and new industry.

*For consumer medical services, market demand is always low, however, which demands first follow on enterprises to the capital market; as they develop new technologies and new business models, a market insider who focuses on consumer medical services and disclosed this name in this story.*

Hong said the government must launch regulations to promote sustainable development of the consumer medical services sector.

Meanwhile, the government should minimize supervision to better ensure market order and consumer rights, he said.

“The industry should introduce new technologies and management models to raise operational efficiency, cut service costs and increase market competitiveness. Meanwhile, medical institutions, pharmaceutical enterprises and insurance companies should strengthen cooperation, and share resources to achieve a healthy and sustainable development of the sector,” he added.

Zhejiang, general manager of Beijing-based Baihuan Consulting Group, said: “Healthcare should be fundamental to win consumer medical services, and it requires industrial discipline and governmental supervision. The sector is new, so it is important to keep a careful watch on this new industry.”

Lithium firms seeking new ties overseas

More cooperation to be established as competition in EVs, batteries intensifies

By LUVI WU
lwu@chinadaily.com.cn

Chinese lithium firms are seeking cooperation opportunities to expand their global presence, especially in mining, which experts said is conducive to harnessing the electric vehicle market.

Early June, the Catchtech-Echelon joint project owned by Denmark’s Catchtech and China’s Echelon was put into production in Australia. The project has total annual processing capacity of 900,000 metric tons. Lithium carbonate equivalent (LCE), making it one of the world’s largest lithium extraction projects after Salt Lake.

Ganziling Lithium said the first phase of its project has a planned annual output of 25,000 tons of lithium carbonate equivalent, and plans to add 80,000 tons of capacity for the second phase, which is expected to be completed in 2023.

Lithium price has surged by more than 23.78 trillion yuan ($3.3 trillion) in the past five years. The rise has been attributed to increased demand for electric vehicles and other tech sectors.

In the past year, lithium companies have been keen to expand their footprint, especially in lithium-rich countries and regions._SELECTED_FROM_CHINA DAILY_

Joe Biden administration needs to take real actions not just window dressing to mend ties

R esolving the Palestinian-Israeli conflict remains a key priority for the Biden administration, both for stability in the Middle East, that is a national security interest of the US, and for the sake of the Palestinian people, which is the fundamental requirement for any lasting peace between the two sides. The root causes of the Palestinian-Israeli conflict, that is the barrier between the two states, have not yet been removed. The US is still not moving forward to achieve a two-state solution.

The Biden administration is showing renewed interest in resolving the conflict, but the US does not appear to be willing to make the necessary concessions. The US has been slow to recognize the Palestinian people’s right to self-determination and to support a meaningful peace process.

The current US administration has so far failed to make any real progress towards a two-state solution. The US has not yet been able to convince Israel to stop its settlement activities in the occupied territories, or to recognize the Palestinian state.

The Biden administration needs to take concrete actions to achieve peace in the Middle East. This includes restarting negotiations between Israel and the Palestinian Authority, lifting economic sanctions against the Palestinian Authority, and working towards a comprehensive solution that respects the legitimate rights of both sides.

Joe Biden administration needs to take real actions not just window dressing to mend ties.

Cool ideas vital to coping with heat waves

Asit K. Biswas and Cecilia Tortajada

Heat waves have become a major global concern, the defining feature of more than half of the year in many parts of the world. These extreme events are projected to become more frequent and intense as the world warms due to climate change. Heat waves can have severe impacts on human health, agriculture, and the economy. They can also exacerbate existing social and economic inequalities, particularly in low-income and vulnerable communities.

The definition of heat waves

Heat waves are exacerbated by global climate change, driven by increasing concentrations of greenhouse gases in the atmosphere. These gases trap heat, leading to a rise in global temperatures. As the Earth warms, the conditions that allow for heat waves to form become more common, and their impacts are amplified.

The potential impacts of heat waves

Heat waves can have serious consequences for human health, agriculture, and the economy. They can cause heat-related illnesses and deaths, damage crops and livestock, and disrupt power grids. Heat waves are also associated with increased demand for water and energy, which can exacerbate existing stresses.

China hailed as a big contributor to global human rights governance

China has been praised for its efforts to promote and protect human rights. In 2022, China hosted the United Nations Human Rights Council’s 50th session, during which it presented its achievements and commitments in human rights. China has been recognized for its progress in poverty alleviation, healthcare, education, and other areas.

Hiring, a polemic analyst, examines three key factors that contributed to China’s success in promoting human rights: its economic development, its political system, and its cultural values.

1. Economic development: China has made significant progress in poverty alleviation, with millions of people lifted out of poverty. This has been achieved through economic growth, job creation, and social welfare programs.

2. Political system: China’s political system is characterized by its commitment to the rule of law, the protection of human rights, and the participation of the people. It has been praised for its achievements in poverty alleviation, healthcare, and education.

3. Cultural values: China’s cultural values, such as respect for individuals and the collective good, have contributed to its success in promoting human rights. These values are reflected in its policies and practices, such as poverty alleviation programs and educational initiatives.

China’s achievements in human rights have been recognized internationally. In 2022, China was elected to the Human Rights Council for the term 2023-2025, reflecting the country’s commitment to promoting and protecting human rights.

But China is not the only country making progress in human rights. Other countries, such as India and Brazil, have also made significant strides. However, there is still much work to be done to fully realize human rights for all.

The challenge of global climate change

The world is facing a severe climate crisis, with rising temperatures and extreme weather events. This is having a profound impact on human health, agriculture, and the economy. The World Health Organization estimates that heat waves alone cause hundreds of thousands of deaths each year.

To address this challenge, the world must take urgent action to reduce greenhouse gas emissions and limit global warming to 1.5°C above pre-industrial levels. This will require a fundamental transformation of our energy systems, transportation, and land use.

In conclusion, China and other countries must continue to lead the way in promoting and protecting human rights, while also addressing the challenges posed by global climate change. Together, we can build a more just and sustainable world for all.
Relieving debt stress

Sustainable development financing for African countries requires greater coordination among various stakeholders.

The global economic crisis, which has significantly increased debt servicing costs, has led to severe financial constraints for many African countries. Debt and external debt servicing have become primary concerns for these countries. In the early 1990s, the situation was less severe than it is today, but Africa is currently experiencing the worst financial crisis in decades. The continent's debt servicing ratio is high, and its debt burden is growing, which poses significant challenges for Africa.

The debt crisis is not limited to the continent but also affects the international community. The global financial crisis has exacerbated the debt problem for many African countries, and the debt burden has risen significantly. In response to the debt crisis, the international community has taken some measures, including debt relief and restructuring, to alleviate the burden on African countries.

However, these measures alone are not sufficient to address the debt crisis. African countries need more support from the international community to overcome this crisis. Therefore, it is crucial for the international community to work together and coordinate their efforts to provide effective solutions to the debt crisis in Africa.

The need for coordinated efforts is clear, and the international community should work together to address the debt crisis in Africa. This requires a comprehensive approach that takes into account the specific needs and circumstances of each African country. The solution must be tailor-made to fit the unique characteristics of each country. This approach should include debt relief, restructuring, and concessional financing, among other measures.

In conclusion, the debt crisis in Africa is a complex problem that requires coordinated efforts from the international community. The African continent needs the support of the international community to overcome this crisis. The solution must be comprehensive, and it should be tailored to the specific needs and circumstances of each African country. The international community should work together to provide effective solutions to the debt crisis in Africa.
From this exhibition, I hope that we will deepen our cultural exchanges with Italy, further strengthen Lee’s emphasis on both science and art in education and provide university students from our country a fruitful art experience.”

Impulsive creativity brings body of work to urban life

Artist Zhang Jinying pushes frontiers of ink at new Beijing exhibition, Lin Qi reports.

Like artist Zhang Jinying shows up himself in the biggest, most exciting video work at his ongoing solo exhibition in Beijing. In the short video work, titled ‘Skipper’, he seeks to present the unison, interaction and imagination of human body expression manifested in painting and video art. In the video, while Zhang is being projected into new scenarios on a large piece of paper on the ground, behind is a story accumulating on his face. His painting, a contemporary dancing performance in the scene, shows his whole body expresses life, sometimes Zhang becomes so lost in the world of ink that he moves his head away from the paper and onto his back. In between their performance, there is footage of two urbanites walking and running through the city streets. There is a contrast between the metropolitan hustle and bustle and the two artists keeping themselves isolated in their own creations.

Zhang says in the chemistry arising from his and For’s healthy movements lies the key to the truth of life. Zhang is concerned with people’s technical experiences and state of mind, how they keep driving him to push forward the frontier of ink painting, which is being demonstrated at his exhibition, ‘Whispers’, running through to Sunday at the gallery of the art portal, Calligraphy and Painting Channel, beside the Beijing Olympic Forest Park.

Zhang has made a name in ink art creation for his realistic approach to depicting people as well as the grassroots and heroic deeds and other grand, historical themes. Meanwhile, he has moved much in profile the mentality of city dwellers since the late 1990s. The ongoing show presents his latest attempt to engage the audience in “the discussion of the identity of man, as the final question of art”. According to the exhibition curator Wei Xiangang.

For instance, Zhang has brought to the show the ‘Virtual Life’ series in which he transposes real people and robots in such a way that viewers “will find it difficult to distinguish one from another”, says Wei. The series “shows the digits of modern civilization cultivated by technological progress and Internet, the complicated relationships between robots and people, and how we cope with these developments must cast a shadow over the future of human society.”

Since 2002, Zhang has created a series of paintings to glimpse into the lifestyle of urban youths. In those paintings, also shown at the exhibition, he has used a lot of red and varying tone of pink and purple, and depicted in an exaggerated manner, elongated human bodies so that they seem to float in midair.

“The work is associated with the primitives of life. It symbolizes power and hope,” Zhang says.

It shows that robots are inhabited in the colorful metropolitan life and the pleasures of consumption culture, and on the other hand, they are lost under huge pressure from work and living costs.

Zhang thereby directs people toward the situations of the young community, how they cope with career and take care of the urban life. How they have to beasts in exhibitions, “so that one day, they will rest again and run over faster” Zhang says.

Wei says in his hope of reproducing ink landscapes of city scenes, Zhang shows figurative details. “He doesn’t seek to present certain people, but grounded in his experiences and observations, he has sought to portray their state of mind,” says Wei.

He says Zhang’s work shows a process of understanding and living oneself, and to the exhibition he has invited visitors to go through that process to gain a self-composed attitude.

Early care for childhood myopia called key

By XU ZIXU

zhixu@chinadaily.com.cn

Befitting Qian Jing was taken aback when she saw her 3-year-old son to have his eyes examined and was told that he had developed myopia. This condition is often called nearsightedness or shortsightedness because it can make distant objects appear blurry. She said she didn’t help but fed regret, realizing that she could have taken measures earlier to fos- ter the right and slow the child’s development. She quickly took her son to form good visual habits such as periodically resting his eyes and increasing his daily outdoor activities.

“Children’s vision is developing constantly. The prevalence of myopia among Chinese children and teenagers in 2022 was 58.7%.” That marked an increase of 2.5 percentage points from 2017. The number had increased by 9.2% since 2010, the Ministry of Education and National Health Commis- sion (NHC) reported on Monday.

To slow down the development of myopia among children, the Beijing Health Commission issued a report on August 5, which, according to the Ministry of Education, is an initiative to control myopia among children and teenagers.

“Beijing, there is a growing trend of myopia development at an extremely young age, accompanied by a rising prevalence of extreme severe myopia. The development of myopia in childhood is a sign that children may have developed an extremely high prevalence of myopia.” That is an important clue that children may have developed extraordinarily high prevalence of myopia,” the report said.

The rapid development of myopia is partly due to the increasing use of electronic devices and the increasing amount of time spent outdoors. Children and teenagers spend a large amount of time on electronic devices, such as smartphones, computers, and tablets, which can lead to reduced time spent outdoors and increased exposure to blue light, which is known to be detrimental to the development of myopia.

In China, the trend of myopia development at an extremely young age, accompanied by an increasing prevalence of extremely severe myopia, needs to be seriously addressed. The Ministry of Education and the National Health Commission have taken joint measures to control the development of myopia among children and teenagers.

The Ministry of Education and the National Health Commission have jointly issued a notice to control the development of myopia among children and teenagers. The notice requires schools and teachers to limit the use of electronic devices and encourage children to spend more time outdoors. The notice also encourages parents to limit their children’s use of electronic devices and ensure that their children get enough sunlight.

Zhiwen recently joined together to host the 2023 Chinese Children and Adolescents Myopia Prevention and Management Trends Report. It is the third yearly report since 2020.

This year’s report involved over 1,200 schools from all children, aged between 3 and 18, in medical establishments for myopia. The study encompassed a total of 136,000 children in Shanghai and Zhou, Guangzhou province, as well as cities of other cities.

The report, which took about six months to complete, found a sur- ceptibility of parents and interactions with their own educational background. It aims to provide new insights into the reduction and management of myopia, and to offer the pub- lic guidance that is scientific, authoritative, and practical.

In recent years, China has been striving to promote risk reduction policies and control myopia as part of a larger effort to improve the quality of life for its citizens. The Ministry of Education and the National Health Commission have jointly established a system of myopia prevention and management among children and teenagers.

According to the report, children and teenagers who spend more time outdoors and less time on electronic devices tend to have a lower prevalence of myopia. The report also found that children and teenagers who participate in physical activities tend to have a lower prevalence of myopia.

The Ministry of Education and the National Health Commission have jointly released guidelines to promote myopia prevention and management among children and teenagers. The guidelines encourage schools and teachers to limit the use of electronic devices and encourage children to spend more time outdoors. The guidelines also encourage parents to limit their children’s use of electronic devices and ensure that their children get enough sunlight.

In conclusion, the prevention and management of myopia among children and teenagers require a comprehensive approach that includes environmental, educational, and social factors. The Ministry of Education and the National Health Commission have taken joint measures to control the development of myopia among children and teenagers.
