Death toll rises to 53 after fires level tourist area in Maui, Hawaii

By MATTHEW J. BARNES 8.11.2023 wwww.chinadailyglobal.com

Wildfires fueled by dry conditions and fanned by high winds from a passing hurricane brought an inferno to the Hawaiian Island of Maui, where Lahaina, a historic tourist town with a population of 13,000, was burned through, with at least 33 people dead.

The courthouse in Lahaina, the town home, all the churches, all the places that are tourist areas and homes, they are gone, and that can’t be replaced.

Richie Olsen, director of operations for Air Maui Helicopters

“We are talking about the longest natural disaster of this generation in Hawaii,” Governor David Ige said The Associated Press. Lieutenant Governor Josh HDYoke took a helicopter survey of the aftermath. “It was something that we couldn’t believe. It looked like a war zone.”

Richie Olsen, director of operations for Air Maui Helicopters, posted aerial video of the town on YouTube. He said he expected some structural damage but didn’t anticipate the total destruction of the structures. “The courthouse, the town home, all the churches, all the places that we know here and Hawaii history are gone, and they can’t be replaced, obviously the ones that just ashes now. You can’t rebuild. It just forever,” said Olsen. Major General Kenneth Keane, adjutant general for the Hawaii Department of Defense, said that three conditions made the fires dead-end and unavoidable—dry conditions with dry fields and dry trees, low humidity and high winds.

“The reason it spread so fast is that there was good fuel to get up to 10 miles per hour. That’s how fast, why Maui County has such hard time during the concurrence of fire because the wind is so high, we couldn’t provide the helicopters to do the water bucket support,” said Olsen.

The fire burned so fast that some people had only minutes to flee, and it took a little over an hour for the flames. The County said it required a team of people who jumped into the water to escape the fire and flood, including two children, and a dog, and another 30.

The death toll could sink as search and rescue missions continue, said local officials. Local hospitals are busy treating people suffering from burns and smoke inhalation.

Maui County Mayor Kirk Sato posted a video message on Facebook “This time last year, we were dealing with the deliciousness of our families, businesses and residents being told the over here in our lifetime. With those bad and destructive weather we are going with each other during this imminent time.”

President Joe Biden declared a major disaster in Hawaii on Thursday, federal aid to supplement state and local recovery efforts in the areas affected by wildfires. Assistance can include grants for temporary housing and home repairs, low-cost loans to cover uninsured property losses, and other programs to help individuals and business owners recover from the effects of the disaster.

Biden expressed his “deepest condolences for the loss of life and destruction of local property,” the White House said in a statement.

About 3,000 tourists from canceled and rebound flights observed a local emergency. According to local officials, the number of tourists was down from 70,000 on Maui Wednesday.

Outbound group travel destination list expanded

By CHEN SHANSHAN 8.11.2023 wwww.chinadailyglobal.com

China announced on Thursday the resumption of group tours to another 26 countries, including popular destinations such as Japan, the United Kingdom, the United States and Australia. The announcement came in line with a nationwide travel agency survey, which quickly added new time of response to countries’ requests. The Ministry of Culture and Tourism said in a notice that starting on Thursday, Singapore and Israel, which are in the Asia-Pacific region, are among the 26 countries.

China has resumed outbound tours to 60 countries in the first half of this year. According to a December 2020 survey, the number of international flights has surged by 40 percent between June and July. Popular destinations include Tokyo, Bangkok, Hong Kong and Macau.

Meanwhile, the number of weekly international flights has increased 40 percent compared with the same period in 2019, and other cities have dropped by 30 percent for the same period, figures from Trip.com showed.

Data from on-demand service giant Meituan showed the number of outbound travelers has increased 50 percent on average since the announcement.

The number of outbound travelers from the country has increased 40 percent in the first half of this year, with its present three Estonia, Singapore, Malaysia, and Vietnam being the most popular tourist destinations.

China is currently working on the resumption of outbound tours to the rest of the world.

Diversifying currency use is good news for world

Notably, recent years have witnessed the economic trends of globalizing industries, a strong dollar policy, and rising commodity prices, which has led to global feedback worldwide.

A prudent global trend is the emergence of the dollar as a reserve currency in international transactions. The dollar is used globally, spanning from Asia to Latin America, and the Middle East to Europe. The dollar is widely used in transactions for the maquiladora and the mining industry.

The use of dollars is not only limited to transactions with numerous countries and international organizations, but has also led to extensive efforts to formulate alternative instruments that would supplement the primary role of US-dollar-based global economic system.

The trajectory of events took an interesting turn for the United States, as the early 2000s witnessed a substantial portion of global reserves held in US dollars, growing above 200 percent. However, by 2023, this proportion declined to around 50 percent. Such a significant decline demonstrates continued attention, particularly to the light on the active involvement of over 80 countries worldwide in dollar-centric structures.

Consequently, the US dollar share of global reserves has experienced a decline since the early 2000s, dropping from approximately 50 percent in the mid-2000s to roughly 25 percent in the 2010s, achieving a dramatic shift.

Diplomats impressed by progress in Xinjiang

By MOVING INTO 8.11.2023 wwww.chinadailyglobal.com

Envoys meet locals to gain insight into region’s socioeconomic development.

In-depth

History of some 2,000 years, Urumqi explores a beacon, where it recalled that such used to be a farmers’ market which yielded a strong economy.

In 2018, the local government launched a project to renovate and improve public facilities in the areas of tourism, culture, gardens, public security, and environmental protection to better serve local residents.

This led to opportunities for Urumqi to focus more on the development of the city, and is now home to more than 20,000 households.

As Rao strode along bustling areas lined with shops selling a wide variety of products, ranging from Urgur handmade traditional clothing to knick-knacks and souvenirs, he brushed shoulders with a crowd of tourists visiting Kashi from different areas of the country during the peak tourist season in Xinjiang. Rao and 20 other senior diplomats, who represent 25 countries, embarked on a visit to Kashi and Aksu prefectures, as well as the regional capital Urumqi from July 23 to Aug. 4.

Many of the diplomats, especially those who had recently taken up ambassadorial posts in China, were making their first trip to the region, where they engaged in face-to-face interactions with local people to gain an insight into Xinjiang's socioeconomic development.

Mohamed, Britain's ambassador to China, who arrived in the country in June, said, "During this visit, we have learnt much about beautiful Xinjiang and the achievements made in this region. Looking back, the changes in Xinjiang, especially in the past 10 years, are fundamental and unbelievable. I believe that the continuous efforts and innovative development made by the region have contributed to the economy, transportation, agriculture, and culture."

China said in 2021, Xinjiang's GDP was double that of 2012, with annual growth of 8.1 percent (8.3% in 2022). Over the past decade, the region's per capita income increased, and its residents' livelihoods improved. "I also believe that the progress achieved in Xinjiang will continue," he said.

For the first time, an ambassador to China, he shared his impressions of the remarkable developments he witnessed in Xinjiang, particularly upon her arrival in Kashi.

"It is really a contrast from what I had heard. Seeing is believing, and I believe what I saw, witnessed by the evident development that has been taking place," Rao said.

The ambassador added: "The people are welcoming. They are now selling literally everything from the edibles to today. People in Kashi are doing a great job in conserving traditional items while still enjoying the modern world.

"The art is not just a reflection of the instruments for 1,000 years (L088).

Trend: De-dollarization promises paradigm shift

from page 1

Remotely, the participation of many citizens in national political system, represented by the citizens engaged in de-dollarization, is a necessary step for the attenuation of the NPT regime faltering under the pressure of US sanctions. The trend furthered by the US-led economic confrontation and regional conflicts such as the US-Iran (incl. Iraq and Afghanistan), North Korea, the Association of Southeast Asian Nations (ASEAN), the United Nations Security Council, and others in the field of dollarization. The trend is spread through the development of the dollarization process, which further impacts the political system and economic system as the dollarization process.

First and foremost, the political environment of the US that contrived in the principles of international politics, which further impacts the political system and economic system as the dollarization process.

As the international cooperation among national states, the dollarization tends to be more prevalent with the development of the dollarization process. And from this point of view, the dollarization process is not only the result of trade and currency arrangements among states but also the outcome of the political and economic environment. The necessity is that the distribution of power in the international system when the US dollar became the reserve currency in 1944 no longer represents the political and economic dominance of the current world order. Hence, the trend toward a politically multipolar and multilaterally organized world order, which has already occurred, also necessitates "multilateral multidimensional" or "liquid multilateralism" in the international system, which would reflect a deeper order world.

The paralysis of de-dollarization finds profound implications including China, Russia, Iran, India, Brazil, Indonesia, South Africa, Saudi Arabia, Venezuela, Argentina, the United Arab Emirates, Kazakhstan, Mauritius, Sri Lanka, Malaysia, and others of all states. Within this context, Russia may have been involved in the construction of an alternative international financial system, which has significantly improved the de-dollarization process. This strategic endeavor encompasses a multilateral approach, featuring high-level collaboration facilitated by the Central Bank of the Russian Federation, alongside a concerted effort to determine key system's order.

Supplementing the above, Russia's de-dollarization policy contributes to the stabilization of the international system, which would reflect a deeper order world. By diversifying the use of dollarization, the Central Bank of the Russian Federation, alongside a concerted effort to determine key system's order.

That is to say, the multilateral approach, featuring high-level collaboration facilitated by the Central Bank of the Russian Federation, alongside a concerted effort to determine key system's order.

The central bank of Russia, the Central Bank of China, and others have reinforced the importance of diversifying the use of dollarization, the Central Bank of the Russian Federation, alongside a concerted effort to determine key system's order.

China raises gasoline, diesel retail prices

China raised its retail prices of gasoline and diesel on Wednesday, based on the recent rise in international crude oil prices. Diesel prices increased by 260 yuan ($40) per ton, while gasoline prices went up by 240 yuan per ton, the National Development and Reform Commission said. Under the current pricing mechanism, the prices of products are adjusted following changes in global crude prices.

**Machinery industry registers stable growth**

China's machinery manufacturing and processing industries registered stable growth in the first half of this year, with sales rising by 9.6% year on year, a government spokesperson said on Thursday. The 9.6% growth was the highest among all industrial sectors, while the corresponding figures for the food processing and market processing and storage industries were both 5%.

**India's GDP growth slows down in June**

India's GDP growth slowed down to 8.2% in the second quarter of the current fiscal year, from 12.5% in the quarter ended March. The government's revised GDP growth estimate for FY23 is 7.1% growth.

**China's GDP growth expected to slow down**

The International Monetary Fund (IMF) has downgraded its forecast for China's GDP growth to 5.6% for 2023, from 5.6% in its April report. The IMF said tighter monetary and fiscal policies, along with global economic developments, would weigh on China's economy.

**S. Africa to deepen trade ties with China**

South Africa's Minister for Trade, Industry, and Competition, Ebrahim Patel, said on Thursday that South Africa and China would deepen their trade and investment ties in the coming years. Patel said that China was an important partner for South Africa, and that the two countries had set a target of doubling bilateral trade to R150 billion by 2025.
Homegrown surgical robots cut into foreign tech monopoly

Significant breakthroughs taking place; market to reach 30 billion yuan by 2026

By ZHENG YIRAN

With tears of effort, China's homegrown surgical robots are achieving significant breakthroughs in independent innovation, marching toward breaking the foreign monopoly on such technology.

In July, the first four fully robotic-assisted surgical robots in China were successfully performed in Zhabei District's People's Hospital, safely and smoothly. Different from conventional operations, a surgical robot played a vital role during the whole process.

Within three minutes, the surgical robot named MikroElena, with a high precision of three microns, injected 600 microliters of thrombolytic drugs into the patient's subarachnoid location in the eye fundus. The robot does a microscope with a 100-micron outer diameter, which is as thin as a hair and, delivered the drugs precisely to the targeted lower cavity, not injuring the retinal pigment epithelium (RPE) layer to avoid vision loss. Post-operative follow-up visits showed that the patient's sight was restored and recovered well.

Liu Weimin, a head nurse at Wujiaxie Town Hospital, said: "The average thickness of the macular central area of the retina is 250 microns, and the ideal precision for surgery inside the central area is within 20 microns. As there is an inherent physiological shaking of approximately 100 microns that cannot be overcome in human hands, it is necessary to introduce robotic technologies into the operations." "Surgical robots increase the accuracy and safety of operations while lowering surgical risks and doctors' fatigue levels. It also helps in shortening the doctor's learning curve and breaking the limits of human physiological operations. However, before the launch of MikroElena, only a few high-tech enterprises and scientific institutions in Europe, the United States, and Israel were engaged in similar projects. The success of the surgery marks a giant leap in the development of China's indigenous surgical robot manufacturers," she said.

Cut DQ, founder and CEO of Shanghai-based Dinostar Biomedical Co Ltd — the company that developed the robotic surgery — revealed that behind the robot's double, noisy and precise performance were years of arduous efforts in research and development.

"The R&D process required the whole team to immensely go through design, simulation, operation and verification. Sometimes we had to continue all previous designs and start again," Cut noted that currently, Dinostar is standing at the forefront of the technology globally. "The introduction of the product enables domestic medical professionals to gain access to the most advanced technology in China. The company is also collecting operating the robot overseas to benefit patients abroad.

In June, China's first homogenous robot for laparoscopic surgery (ENZY) surgery conducted by Beijing-based high-tech enterprise Shengyi Robotics, was approved by the National Medical Product Administration. It is the world's first commercially approved robotic surgery, the first being the "Da Vinci" robot developed by US-based Intuitive Surgical Inc.

"The robot adopts independent, innovative technology that is the first in the world. It features a wide range of motion, strong load capacity and high reliability," said a public announcement from the NMPC.

Dr. Ning Nanming, chairman of the Chinese Ophthalmologic Doctor Association, said: "The start-up launch of homogenous surgical robots breaks the technical barriers of foreign companies, and dramatically improves the level of China's smart manufacturing and advanced technology." From Cut's description: "For years, China has long relied on imported high-end medical equipment. The realization of independent innovation and domestic robotics promotes the internationalization of China's healthcare industry. Meanwhile, the development of surgical robots helps reduce the procurement costs of medical equipment, thus lowering the overall burdens of medical services, enhancing the medical service quality and promoting to enjoy high-quality healthcare."

According to statistics from Wind Info, China's surgical robot market was estimated to value 10 billion yuan ($1.67 billion) by 2023. By 2026, the market to restore total 30 billion yuan, with a compound annual growth rate of 42.61 percent.

Chinese-built railway a new boon for Kenyans

NAIROBI — While growing up in the poor suburb Kuruvi (approximately, Lawrence Fle Muri- kiri) was at one time juggling his schoolwork and tending to his parents' farm, tending to the family’s vast farm of hand-work, footwear and service.

Muriuki strongly applied for a job in a mechanical engineering training course at a vocational college in the Kenyan capital of Nairobi, where he earned a livelihood and gained a good grade. Now, supervisor of the rolling stock department of the Chinese-built Mombasa-Nairobi Standard Gauge Railway (SGR), Muriuki glows with pride having sustained a career that has eluded the majority of his peers.

Prior to the launch of the 464-kilometer-long modern railway on May 31, 2017, the 23-year-old benefited from training in the maintenance of passenger trains, sponsored by the SGR contractor. "I was lucky! I was considered to join the SGR in the rolling stock section for the maintenance of passenger trains," Muriuki said during a short interview, affirming the Chinese instructors for imparting crucial skills.

Muriuki, who has been working with the SGR for three years, has described his job as "the greatest". "The Chinese have been working with the SGR since they joined the growing ranks of local companies and demonstration of China’s smart manufacturing and advanced technology." From Cut's description: "For years, China has long relied on imported high-end medical equipment. The realization of independent innovation and domestic robotics promotes the internationalization of China's healthcare industry. Guangxi reaps trade bonanza with influx of goods, travelers

NANNING—After the Yunnan-Guangxi border trade zone opened on July 20, the volume of trade between the two regions has continued to rise. As of November, the total number of goods transported between the two regions has exceeded 1.5 million times, reaching 512,600,000 tons, an increase of 126% compared to the same period last year.

NANNING—As the Belt and Road Initiative continues to strengthen China-Brunei cooperation, the two countries have signed a cooperation framework document, laying the foundation for a new chapter in bilateral economic cooperation.

Ethnic Mongolian festivities draw revelers to the lush grasslands

Making ethnic Mongolian wrestlers Unrarsan can be a daunting experience. Unrarsan, 33, weighs 120 kilograms and towers over 1.8 meters, with thick, powerful limbs and a long body frame to match. He started wrestling as a child, taking part in many competitions in his community in Alxa League of North China’s Inner Mongolia autonomous region.

Unrarsan may seem all muscle to many people, but when asked about the most important factor behind beating his opponents, he said it is hard training. "Mental strength is what matters for me," he said. "The pressure of facing another wrestler who can beat you can be tremendous, so you need to buck and focus on the match." Mongolians treat wrestling as one of their traditional "unrestrained sports," with the other two being horse racing and archery.

The sport forms one of the biggest draws at the annual Naadam Festival, a major summer ethnic celebration for young and old to revel in fun and games on the lush, green grasslands across the region.

In Alxa League, residents and visitors from more than 500 villages and beyond packed the outdoor festival on July 22 as they enjoyed music performances featuring the traditional horse-head fiddles and other ethnic tunes, while competitors such as Unrarsan worked to go for gold in their respective events. Herdsmen, like Unrarsan, who was one of the archers dressed in their traditional attire for a shot at the top honour. In the 30-metre angle competition, "archer with bow string attached for two days" and "archer with recurve bow and arrows"分别，which have been traditionally seen as a way to help keep us connected to our roots, to nature and the environment. It’s also good fun for the family," said Unrarsan.

Belt and Road watershed moment for China-Latin America relations

Beijing-Buenos Aires ties enter ‘golden moment’

By LEI BIAN SHI

Argentina and China have become a “strategic partner” in Latin America, and the Belt and Road Initiative is expected to enter a “golden moment” in the China-Latin America relations.

In December 2022, China and Argentina signed an agreement to build a $21.36 billion railway linking the two countries. The agreement is expected to further strengthen economic ties, transportation and cultural relations between the two countries.

Exploring markets

There is a market in Latin America for Chinese products and services, and there is a growing demand for Chinese-made products. However, a number of challenges exist. First, the infrastructure in Latin America is not as developed as that in China, so the construction of infrastructure facilities is a priority. Second, the Chinese market is highly competitive, and it is difficult to enter. Third, the Latin American market is highly fragmented, and it is difficult to establish a presence.

Complementary economy

Latin America and China have a complementary economic structure. Latin America has a large agricultural sector, and China has a large manufacturing sector. The two countries can work together in the areas of agricultural production, manufacturing, and trade. Additionally, the two countries can work together in the areas of science and technology, education, and culture.

Foreign student hopes for strengthening bonds

By LEI JIA XIANG

On the second day of the Belt and Road Forum in Beijing, Chinese President Xi Jinping proposed the Belt and Road Initiative. The initiative is expected to bring significant benefits to both China and the countries along the Belt and Road.

Tech know-how eases cherry road congestion

By DONGLEI WANG

Cherries from China are now easier to get to the market. The CRIJ has developed a new technology that can significantly reduce the amount of congestion on the road.

The 91st Summer World University Games kicked off in Chengdu, southwest China's Sichuan province, from July 18 to Aug. 2. The world's top 126 universities will compete in various sports over 10 days, including basketball, beach volleyball, beach tennis, skateboarding, and surfing, among others. A popular destination for high-end cultural and commercial brands and a regional cultural hub, Chengdu is an emerging metropolis, attracting a growing number of young people. The Chengdu logo, which is a graphic representation of the city's ancient Cultural Relics Park, features a red lotus bud, symbolizing the vitality of the city. The logo was unveiled in 2024 and will be used until 2025. The logo's colors are inspired by the city's natural features, such as the Tibetan Plateau, the Jiuzhaigou Valley, and the Min River. The logo's design is intended to convey the city's cultural heritage and natural beauty.
World burns on US' state of political correctness

There is apparently no need for politicians in Washington to be afraid of anything. Evidence to that end includes the recent letter to the Chair of the Federal Communications Commission (FCC) to address questions about political security concerns involving Huawei, the main company producing wireless networks, including Qualcomm and Siemens. This letter is from Reporters Committee for Investigative News, questioning whether US military and health authorities have been sufficiently informed about Huawei's alleged link to the Chinese military.

Made for sale

The Philippines has made a bold move in the face of the US pressure to cut ties with Huawei. In a statement, the Department of National Defense (DND) said it is not aware of any link between Huawei and the Chinese military and that there is no evidence to support such allegations.

Manila to be wary of being caught in a trap

The Philippine government has made a clear statement against Washington's pressure to cut ties with Huawei. In a press conference, the Department of National Defense (DND) said it is not aware of any link between Huawei and the Chinese military and that there is no evidence to support such allegations.

The DND has already made it clear that the Philippines is not, and will not be, a party among those countries who cut ties with Huawei. The Philippines is determined to continue its partnership with Huawei, which has been a reliable and trusted partner in the development of the country's telecommunications infrastructure.

Central message of BRICS is that global South and Africa matter

The Chinese government has reaffirmed its commitment to supporting the development of the global South and Africa. In a speech at the BRICS summit, Chinese President Xi Jinping said that China is committed to promoting the interests of the global South and Africa, and that China will continue to work with these countries to achieve common development.

‘Decoupling’ more detrimental to US

U.S. President Joe Biden signed an executive order on Wednesday that would see a range of Chinese investments, including in tech sectors, put under a new and more intrusive review process, a move that will eventually make it more difficult for China to invest in America. The executive order is just one new move to “decouple” the two economic superpowers, a term that will eventually mean more strategic competition between the two countries.

Collaboration in technology has been the key to making beneficial part of overall cooperation between China and the U.S. Over the past couple of decades, the two countries have been driven by competition. But competition has been healthy and productive.

In the early 21st century, China and the U.S. have worked hard to cooperate in various areas, including climate change, nuclear non-proliferation, and counter-terrorism. Despite the two countries’ differences and disagreements, they have managed to work together on a range of issues.

The U.S. has been a key partner in pushing for clean energy and climate action, while China has been a leader in reducing carbon emissions. The two countries have also worked together to prevent the spread of nuclear weapons and to combat terrorism.

However, despite the progress made in these areas, there have been some setbacks. For instance, China and the U.S. have disagreed on how to address climate change, with the former wanting more aggressive action and the latter more gradual.

In addition, there have been concerns about Chinese technology companies’ ability to compete with U.S. companies in the global market. This has led to increased scrutiny of Chinese investments in the U.S., particularly in sectors that are seen as strategic or critical.

The executive order signed by Biden on Wednesday is likely to further tighten the screws on Chinese investments in the U.S. The order will give the U.S. government more power to review and block deals that it deems to be a national security threat.

This move is part of a broader strategy by the Biden administration to reduce China’s influence in the U.S. economy. The administration has been critical of China’s economic policies and has made it a priority to reduce the country’s economic influence.

The order is likely to have a significant impact on the U.S. economy, particularly in the tech sector. Many Chinese companies are major players in the tech industry, and the order is likely to have a ripple effect on the broader economy.

It is also likely to have implications for other sectors of the economy, including defense and national security. The administration has been加大 China’s influence in the U.S. economy, pointing to the need for a more aggressive approach to reducing China’s economic influence.

While the order is likely to have a significant impact on the U.S. economy, it is also likely to have implications for China. The Chinese government has been critical of the move and has warned that it could lead to a “decoupling” of the two economies.

The Chinese government has responded by warning that it could lead to a “decoupling” of the two economies. This could have serious implications for the global economy, particularly if it leads to a reduction in trade and investment between the two countries.

China has long been a major player in the global economy, and a reduction in trade and investment could have serious implications for both economies. The Chinese government has been quick to respond, warning that it could lead to a “decoupling” of the two economies.

The Chinese government has responded by warning that it could lead to a “decoupling” of the two economies. This could have serious implications for the global economy, particularly if it leads to a reduction in trade and investment between the two countries.

China and ASEAN are working together to safeguard peace and stability and achieve common prosperity

China-ASEAN relations, which spanned five decades, have not only achieved a high level of maturity but also maintained a high level of momentum and innovation. The Belt and Road Initiative, which was proposed by President Xi Jinping in 2013, has played a significant role in promoting China-ASEAN relations. The Initiative has not only enhanced the economic cooperation between China and ASEAN but also strengthened the political trust and mutual understanding between the two sides. As a result, China and ASEAN have. strengthened their cooperation despite their differences, sticking to the long-term vision of peace and development. Over the past decade, China and ASEAN have maintained a high level of cooperation and coordination in various fields, including politics, economy, culture, and society. This has helped to promote mutual trust, mutual respect, and mutual understanding between the two sides. At the same time, China and ASEAN have also worked to promote peaceful development and dialogue, ensuring that any differences or disputes are resolved through peaceful means.

GCC looks east

Economic and trade cooperation, as well as unconditional participation in a new world order, has changed its orientation

The GCC countries have been focusing on promoting their economic and trade relations with East Asia, particularly China, over the past few years. The GCC countries, which are predominantly oil-dependent, have been seeking to diversify their economies and reduce their dependence on oil exports. In this regard, China has emerged as a crucial partner for the GCC countries. China has been investing heavily in the GCC countries, particularly in the energy sector. This has led to the establishment of numerous joint ventures and projects, which have contributed to the economic development of the GCC countries.

The GCC countries have also been looking to diversify their trade relations with East Asia. The GCC countries have been seeking to increase their exports to East Asia, particularly China, and to reduce their reliance on traditional markets such as the Middle East and the European Union. This has led to a significant increase in the volume of trade between the GCC countries and East Asia. The GCC countries have also been seeking to attract foreign direct investment from East Asia, particularly China, to diversify their sources of finance and to reduce their dependence on traditional sources of finance.

In conclusion, the GCC countries have been focusing on promoting their economic and trade relations with East Asia, particularly China, in order to diversify their economies and reduce their dependence on oil exports. This has led to the establishment of numerous joint ventures and projects, which have contributed to the economic development of the GCC countries. The GCC countries have also been seeking to attract foreign direct investment from East Asia, particularly China, to diversify their sources of finance and to reduce their dependence on traditional sources of finance.
It's the 1960s, in an era before machines were widely used, Anhui province in eastern China was a common sight in northwestern China. Then, in the 1980s, migrant workers flocked to areas with concentrated population centers, helping China build modern cities. With the reform and opening-up in 1978, the great changes that have taken place are reflected in the lives of Chinese people. The exhibition presents a portrait of the transformation of people's relationships with the world.

The train station to grab tickets to go home, and the "saddle wolf" who helped clean high buildings and their670,000 permanent residents. A significant turning point came about when China initiated poverty alleviation efforts, resulting in numerous development projects and remarkable improvements in the village's housing, roads, and overall environment.

In June 2000, a tourist cooperative was established in Shihe, improving tourism and the rural life of ethnic minorities. The village has been listed as a "national key village" for tourism development. The village is a national key village for tourism development. This project involves a population of about 100,000, mainly Chinese in Yunnan. The Yi tribe has been well-preserved in the village, and the unique cultural rituals and rituals and festivals are still performed.

Walking in the village, tourists can experience the Yi people's traditional costumes, including the Yi minority's unique life. The Yi people, who have lived in the area for more than 1,000 years, maintain their traditional costumes and customs to this day. The village is a national key village for tourism development. The Yi ethnic group — "as you walk, the road is becoming broader" — could also have been written about Sima Xianren.
Walking into memories

Tour guides share why exploring the city on foot is now one of the hottest trends despite the tiny streets with no real twist. The 20-minute walk of paths in Shanghai and Hangzhou, Zhejiang province, has been a walk of fame and expert. The reason behind starting the walking tour is that urban areas, like Shanghai, has been a walk of fame for a few years, was simply to meet new people. It isn’t easy for residents to make friends outside of work. But through a platform like a city walk, we can do so and feel truly in an unfamiliar city. I could easily connect with someone who can walk to which funeral service. He says, Gao, who is an English teacher.

Behind the boom

The reason behind the boom can be seen in interest in city walks. Many nationalities are engaged in looking at social media platforms. Many nationalities are engaged in looking at social media platforms. Many nationalities are engaged in looking at social media platforms.

The pandemic, it is not easy to move around. As such, we must be ready and value the beauty of what’s in front of us. So An Xiyi, a tourist guide is Shanghai. Other recent may include how the city walking is an affordable way to relax and get to know new places and meet new friends.

The heritage architecture has been well-preserved in the city. Old buildings like industrial plants are well-maintained. Roads and transportation have become more convenient. Stockholm’s architecture has been upgraded and also well-maintained. There is something I regard very as aimportant feature.

Besides infrastructure upgrades, Shanghai is also introducing diverse cultural and lifestyle events that encourage people to explore the city on foot. In the last few months, the Music in the Summer Art festival will reach the streets of Shanghai’s Xujiahui district.

During the event, three musicians are in a violin and a saxophone and a flute — performed classical music in public spaces, such as Xingang Park, the Bund, Wujiaochang Hotel, and the city’s Grand Theatre and Front. These roles and public spaces were once Shanghai, among the most popular spots for leisure walking.

Earlier this month, Xianghuoxing launched a weekly festival event in the city’s Shanghong district that featured music, food and drinking events, night marketer and a host of activities related to Chinese musical.

Frank Wildhorn, the composer of the Chinese musical No Longer Human, held a concert at the Shanghai Grand Theatre on Aug 4 unveiling the premiere of the show, his adventure with the quality of the production, the strength of the actors, and the possibility of combining music with original Chinese stories. A rare fruit of performance for No Longer Human kicked off at the Shanghai Grand Theatre on Aug 3 and will run until Sunday.

The novel was published following the author’s suicide at the age of 36. In the novel, Yao and the heroine is incapable of conveying her true self to others and turns to alcoholism and drag shows for her disappointed. Most of the incidents depicted in the story was based on true-life-experiences. Seeing how the novel was a best-seller in China, Citrus Yingshi, the president of Shanghai based musical company Rainbow, decided to adapt it for the musical hit and hire Wildhorn as the composer.

The production premiered in December 2003 and starred Liu Zhifu and Ji Haoyang in terms of Yao, the heroine and the author himself. Back in 1990, Wildhorn was a successful songwriter, and the song Why do You Have to Do That? was composed by the late WildHorn himself premiered the stinger to the top of the Billboard hits of all time.

Last year, the Virtuoso Symphony Orchestra performed Wildhorn’s ‘Do You Know’ for the first time in the city. Before moving to Shanghai.

The American, who has worked on international projects in the Czech Republic, South Korea and Japan, says the best storytellers muses and languages, and that being dedicated to a Japanese woman has resulted in an Eastern influence on his compositions.

As a prolific artist who has managed multiple musicals simultaneously, Wildhorn says he has been personally immersed in his successful work.

In an article that was published with his experience of creating in original Chinese musical, and he would be considering making more projects in the future.

The festival is being run by Rainbow. According to Wildhorn, since the late 1980s, the Chinese musical has been attracting more attention, but the production has been to give much cred to the ‘new’ city walk. Wildhorn also praises the Shanghai production for being an excellent example of the Chinese musicals.

During a stint at the Shanghai Grand Theatre on Aug 4, American composer Frank Wildhorn played the piano and sang lead vocal, such as Li Wei, Wang and Li Qian (also) performed several numbers from the musical. tasty.

LIVING A SENSE OF ADVENTURE

Summer program allows visitors to explore the National Natural History Museum of China after hours and even sleep among the dinosaurs, Wang Qian reports.

When night falls and museums close doors to the public, some close doors to the public, some keep them open for a few hours to allow educators and researchers to work on exhibits or research projects. This allows visitors to gain a behind-the-scenes view of the museum's operations.

The National Natural History Museum of China, which is home to a vast collection of natural history specimens, offers night tours for visitors to explore the museum after hours. These tours provide an opportunity for visitors to see the museum in a new light and learn about the incredible exhibits and collections housed within.

On a recent night tour, participants were able to explore the museum's exhibits and see the behind-the-scenes workings of the institution. The tour included a visit to the museum's research labs, where visitors could see researchers at work, and a talk with a museum curator about the history and significance of the exhibits.

Visitors also had the chance to see the museum's evening events and learn about the various activities and programs that take place after hours.

The museum offers a range of educational programs and events throughout the year, including workshops, lectures, and film screenings. These programs are designed to engage visitors of all ages and provide a deeper understanding of the museum's exhibits and collections.

In addition to the night tours, the museum also offers a variety of other programs and events for visitors to explore. These include guided tours of the museum's exhibits, family-friendly programs, and educational workshops for students.

Overall, the National Natural History Museum of China offers visitors a unique and engaging experience, allowing them to explore the museum after hours and gain a deeper understanding of the incredible exhibits and collections housed within.
