Expansion would boost global status

The world is desperately looking for a new system that can help to overcome multiple and multidimensional challenges. Economic recessions, the global health crisis, and the COVID-19 pandemic have left the entire world facing a new and deadly reality. The Great Depression, the Great Recession, and the COVID-19 pandemic are all evidence of the world’s vulnerability. The United States’ rise to global dominance is now under threat, as China’s rise to global status is a major challenge to the Western powers. The future of the world order is uncertain, and the United States and other Western countries are struggling to maintain their dominance.

The rise of China has been a major challenge to the Western powers. The United States and other Western countries are struggling to maintain their dominance.

Zulu language firms of two nations

By CAO ZHENGNING in Beijing  caozhengning@chinadaily.com.cn

Huang Lichi returned to Beijing early last week from Zimbabwe, the country of his birth. Huang is the Chinese ambassador to Zimbabwe. After a period of reflection, he decided to return to China and continue his diplomatic career.

Huang said the ambassadorship in Zimbabwe was one of his key priorities in his career. "I have spent over 10 years in China, and I know the Zulu language very well," he said.

The Zulu language is widely spoken in South Africa, and there are many Zulus in China. Huang said he wants to improve the Zulu language and culture in China.

Huang said that his mission in Zimbabwe was to promote economic cooperation between China and South Africa. He said that the two countries have a significant economic potential.

The International Bamboo and Rattan Union (IBRU) has been promoting the use of bamboo in China, contributing to sustainable development and economic resilience in the country.

IBRU was founded in 1998, has seen the identification of over 100 bamboo species in the country. It has helped to develop a new economy for China.

IBRU's organization has been advocating for the use of bamboo as a sustainable material. It has been working to further utilize innovative plants to develop industries, including construction, architecture, furniture, and other products and handicrafts.

IBRU has been working to promote the use of bamboo, and its efforts have been gaining momentum in recent years.

At about that time, a free rental policy was implemented in Hengdian, attracting a large number of film and TV crew and performers to settle in the area. Wang and many others left Beijing and traveled to Zhejiang.

In those days, film and TV sets in Hengdian were paid 40 yuan (10 per cent) per day, which was about that much, and received opportunities to perform everywhere and to dream about their own films being shot in the town, Wang said.

He added that while the first arrivals, there were often conflicts between crew members and performers due to lack of a unified organization for the latter.

In July 2003, the Actor Guild was officially established in Hengdian — the first organization in China dedicated to establishing and improving communication between crew members and performers.

On joining the guild as a special actor, Wang daily became over 1,000 yuan on average.

In the past 20 years, the guild has registered nearly 100,000 actors and actresses. Nowadays, some of these performers are placed at the bottom end of the film and TV industry chain.

Wang, a native of Fushan, Liaoning province, who is registered with the guild under the name Bao, said: “Most of the actors are from grass roots areas, adding that Hengdian provides them with the chance to chase their dreams.”

Hengdian provides equal opportunity for actors in the world's sky who are willing to work hard to be rewarded.

Approximately 10 years ago, a new novelism in filming was realized, as the Actor Guild had been established. It decided to host TV and film productions. The daily pay of extras such as Feng has shot down from 200 to 120-300 yuan.

Bao said Hengdian World Studios offers cheap food-style cabins for those registered with the Actor Guild.

“The guild takes public welfare seriously, as it aims to improve the lives and salaries of its members. Such a platform plays an important role in boosting the confidence of thousands pursuing their dreams,” Feng added.

Improvements made

In 2013, major reforms were introduced by the guild, including certification of performers’ skills, the introduction of performance contracts, and pairing actors in different ways. The overall aim was to standardize management and improve service quality.

That year, the label of “Bao” was formed, a brother of Bao, who decided to move to Hengdian after receiving some support from his friend.

Remembering the past 10 years, he said: “I hope to be in more different roles. Hengdian has a large demand for actors, and I have more ways to develop.”

In Beijing, the film and TV industry has limited resources, and the city’s original shooting base for such productions is vanished. Under this condition, Hengdian is constantly developing and has some infinite possibilities.”

Zhang, who has acted as a minister, a leader, a man and an artist in various roles, has worked as an assistant director and mimetic producer.

“The film and TV cultural scenes in Hengdian are unique in China,” Zhang said, adding that this development of the entire industry chain for such productions has won the town accurate recognition and careful research with a long history.”

Three years ago, Zhang said that giving public welfare training classes for performers registered with the guild, teaching performance skills to new arrivals.

Wang Qingpan, who was born in 1972, found her performance skills in these classes. In just months, she performed from being an ordinary extra to a special actor and then quickly rose to fame.

“Every month, the guild selects those with prospects and also special acts. As long as you study hard, an entire building, and are not picky, you can find plenty of opportunities here,” Wang said.

It is not only the performers, but also new members, who benefit from the opening in Hengdian.

Wang Xianzeng said: “When I was an assistant director, I traveled all over the country to find actors that met my requirements, but I always failed. The problem was not solved until I returned to shoot in Hengdian.”

Earlier this year, Long Xinyue, a special actor who has been in the industry for more than 10 years, was placed in a show with Zhang Fengwen, who plays the lead role in the popular TV series The Commoner.

In Hengdian, he not only worked as a center for film and TV production work, but also a supervision where productions can be pursued.

After graduating from Guangzhou Film Academy, he worked in Beijing, Hengdian and Shenzhen, Guangdong province, before entering in Hengdian.

Last year, Long took part in the first tourism assessment held in Dangang, referred to as “Dangang Tourism.”

“Compared with other places, Hengdian is brilliant and offers everyone an equal opportunity. I believe I will realize my dream one day,” he said.

Fond memories

At night, the Huangyue’s bar on Weixiang Street, Hengdian, is always crowded with well-received TV series like with autographed photographs of films and TV stars.

Over the years, the bar has witnessed the bustling life of Hengdian, with many customers chatting with friends over a glass of wine, watching projected movie clips, and even drawing inspiration from their surrounding.”

Hui arrived in Hengdian in early 2000, initially, he worked as a film projectionist, but then branched out to become a technicians who can also direct and act.

“Some experienced the ups and downs of the film and TV industry, which has not been seen before for a long time,” Hui said.

He cherished memories of Denglong making west in the film 4 am amid criteria of film making, and free movies being shown every night in the cinema, where their performances discussed about the future.

Ma Kai was once a Hong Kong actor, and he had professional training. As a rookie director, his film feature made in the Professional Awards, was screened at the Cannes Film Festival.

“In Hengdian, I’ve had many possibilities,” Ma said, who first arrived in the town in 2003. “I never expected there to be such a large film and television base here, I’m thrilled.”

Ma said, this time in Hengdian has been the life an unbridled adventure for me. When I first heard the name of this place, it has strong connection with the source of inspiration for this movie. “As long as you do what you enjoy, as long as you are patient enough, you can sometimes go off your path to your talent, you don’t necessarily think that all the things you like can be done in a kind of mystery,” Ma said.

Adapted Cheng Qi, a director and producer born in Hong Kong, bought a house in Hangzhou in 2003, had been traveling to the town frequently from Hengdian.

He has been nominated for Best Action Design at the 34th Golden Horse Awards.

In 2003, Cheng arrived in Hengdian for the first time, along with other Hengdian, development of the film and TV industry in Hengdian, in July 2003, he was enjoying a golden age at that time, with Cheng and his team traveling to Hollywood and major TV and TV shooting locations in Southeast Asia.

“The Hengdian development model is different from that of his own film and television production houses. For example, Hollywood is located in Los Angeles, a bustling city, which is not only the center of the global music and film industry, but also has the world’s greatest commercial entertainment,” Cheng said.

“Hengdian used to be a small town. There was only Wuxianwei Street and two small TV stations. The ‘Caozhou Cinema’,” he said.

Since then, the Film and TV industry in China has developed rapidly. Cheng has directed more than 20 Hong Kong stars who have settled in Hengdian, which builds a bright future for them.

Lisa Shyín, a Hong Kong actor and TV producer nominated for Best Art Director at the 33rd China Film Gold
dust Awards in Xiamen, Fujian province, in 2019, and TV professionals from Hong Kong have crossed into Hengdian when they visit China.

“Hengdian is home to many pro-
cem and professional groups. It has obvious advantages, which have been the industry’s production levels rapidly improved in the past years.”

“In Hengdian, an art team composed of 200 people, has worked together at the same time, sometimes even at same apartment,” she said.

In January 2016, the Dangang Production Company, a subsidiary of the DUII, was officially established, with Zhang as the chairman of which served as the world’s most competitive film and TV production company.

Since 2006, the local government has introduced a series of policies to offer film subsidies for extras and also provide job opportunities.

In 2019, the Actor Guild enhanced the professional management of actors and launched monthly meetings for administrators and managers to promptly resolve problems for frontier performers.

Expert: US, Asian allies seek to isolate, encircle China

By YIFANXU in Washington

A US expert says that the Biden administration is trying to re-engage with Japan, South Korea and Vietnam in order to counter China.

“This is the Biden administration’s way of engaging with the US allies in response to China’s growing influence in the region,” said Yifan Xu, a senior fellow at the Washington-based think tank CSIS.

The U.S. is trying to strengthen its ties with South Korea, Japan and Vietnam in order to counter China’s influence in the region.

In the past, the Biden administration has worked to enhance relations with these countries, but it has also faced challenges in doing so.

The US is trying to balance its relationships with these countries, as well as its relationship with China.

The US is also trying to work with these countries to address regional issues, such as the South China Sea disputes.

In the past, the US has faced challenges in working with these countries, but it has also made progress in doing so.

The US is also trying to work with these countries to address regional issues, such as the South China Sea disputes.

With these challenges, the US is trying to enhance its ties with these countries in order to counter China’s influence in the region.

Xu said that the US is also working to enhance its ties with India and Australia in order to counter China’s influence in the region.

2 Chinese entities off US list, bid to grow

Experts welcome BIS move, mutual respect and commitment in focus

By WANG KEZI
wk466128@china.org.cn

The Bureau of Industry and Security under the US Department of Commerce, on Monday removed 27 Chinese entities from its Unreliable Entities List, granting exports to China in some cases.

Removal from the Unreliable List will lift restrictions on the Chinese entities, enabling them to receive shipments from US exporters and keep up normal business cooperation, according to experts.

Removal by the US government was prior to the Chinese Ministry of Commerce’s announcement on Tuesday to take countermeasures against the US. Commerce Minister Wilmarам Wan said, the US government’s move was a signal of its willingness to resolve their specific concerns related to the US business environment.

The Chinese government has always stressed that US policy needs to be transparent, targeted, and in line with the principle of a level playing field.

According to the BIS statement, along with the 27 Chinese entities are Beijing Pinnacle Tech, Guangdong Guanglian S&T Tech, Shandong Chenguang Guanglian S&T Tech, Co and Hainan University.

The BIS move will help enterprises in China and the United States to conduct normal business cooperation and ensure the global industrial chain, according to a research fellow at the Development Research Center of the State Administration for Market Regulation.

Experts said the BIS entities list is just one of the US government’s measures to resolve their specific concerns related to the US business environment.

But experts emphasized the importance of mutual respect and commitment in normal business cooperation.

By HEI JINPENG in Shanghai

While the A-share market benchmark Shanghai Composite Index lost 0.67% on Monday, the offshore dollars have successfully rebounded in response to the US decision.

The dollar index on Monday continued to hover to near one-year lows, which will help further global currencies.

The offshore yuan rose 149 points on Monday against the US dollar, in response to the US-BIS move.

This follows news that at least 17 US companies have announced since Monday plans to report information of mixed-owned mutual funds products aimed to help Chinese investors. The total value of such transactions has reached $16 billion (117.2 billion yuan).

The move reflects that US companies are seeking to expand business in China’s offshore market.

A response plan is expected to be released by the Chinese government soon.

A chief economist of First Second Fund said, the repriced plan of mixed ownership will help boost the offshore yuan, which is now facing a lot of pressure.

The confidence is not the same as before.

The effect of these reversals can be proven by the market rally on Monday, but now, when companies are able to release the news, more positive signals can be released.

Every company is a major player in the offshore yuan market.

Experts said China’s A-share market is also facing a lot of pressure.

This is why China is leading the global trend in offshore yuan.

**CIFTIS to inject stronger impetus into services trade**

BEIJING — Despite a complex and challenging external environment, China's services trade has recently achieved strong growth, emerging as a highlight of its high-standard new pattern of opening-up.

The total value of China's services trade achieved a year-to-year growth of nearly 20%, to 1.47 trillion yuan (about $222 billion) in the first eight months of this year, marking the second globally in nine years in a row, according to the Ministry of Commerce.

China has been holding a series of high-level conferences regarding the upcoming China International Fair for Trade in Services (2023 CIFTIS), a key flagship event to promote China's high-quality development.

Themed “openness-leads-development; cooperation creates a win-win future,” the fair will be held at the China National Convention Center and Shougang Park. The two venues cover an exhibition area of 50,000 square meters.

“Efforts will be made to improve the functions of CIFTIS, making it the most influential fair for trade in services, injecting new impetus into the global economic recovery,” said Chen Qian, assistant minister of commerce.

China has hosted a series of high-level conferences regarding the upcoming CIFTIS and CIFF in September. CIFTIS, held annually in Beijing, is an important event to promote global trade and investment in services.

The theme of this year’s CIFTIS features numerous high-level conferences, exhibitions, and activities, providing a platform for all stakeholders to deepen cooperation and explore innovative development opportunities.

The United Kingdom, the guest country for CIFTIS in 2023, will join CIFTIS to meet and share with CIFF in September, according to the CIFF organizer.

China Railway No. 1 Engineering Group Co Ltd said the under-construction Xiamen-Taizhou Railway project has completed a phase of over 95% of the total length, ensuring the completion of the total project by December.

**Sino-South Asian infrastructure propels connectivity**

KUCHING — With the high-level visitors and the media showering attention, the Sino-South Asian countries have witnessed a wave of political, economic, and cultural exchanges.

Statistics from China’s Ministry of Commerce indicate that, up to now, China’s cumulative investment in the Sino-South Asian countries has exceeded nearly 50 billion yuan. Complemented projects in 2023, enabling the total to exceed 100 billion yuan.

Honing its focus in Pakistan to more than 30 road and bridge projects in Bangladesh, as well as other collaborative projects such as the expansion of Lachung, Khulna international airport, and the railway projects in South Asian countries and beyond, China has played a vital role in enhancing connectivity and infrastructure in the region.

Aimed at achieving the targets set by the governments of Sino-South Asian countries and the Belt and Road Initiative, China has been working tirelessly to strengthen cooperation and investment in the region.

**Signify bullish on China biz with long-term commitment**

BEIJING — China is part of our business strategy. We are here for the long run, and have already been here for more than 20 years,” said Eric Bendtzen, CEO of Signify.

Signify’s China chief said: “China is a significant market for Signify and our operations here are an important part of our global supply chain. We will continue to invest and grow our business in China.”

China is a significant market for Signify, and its operations here are an important part of its global supply chain. The company plans to continue its investments and growth in the country, with a focus on technology and innovation.

Lighting MNC’s CEO applauds govt support to new production line in Jiangxi

By ZHENG YIRAN

Living the growth potential in the Chinese market, Dutch multinational lighting company Signify has further expanded its investment in the country to deepen its presence in the market.

“Long-term commitment to the Chinese market is part of our business strategy. We are here for the long run, and have already been here for more than 20 years,” said Bendtzen, CEO of the Amsterdam-based company.

The remarks came after the company on Saturday unveiled an insular in Jiangxi province — its largest factory in the country. Covering an area of 290,000 square meters, the new factory is expected to produce around 10% of the company’s total LED lighting products for both China and other markets.

The factory will be fully operational by the end of this year with 52 production lines. It will leverage global production technology, and has the capacity to produce 30 million products per year.

Chinese companies are among the world’s top players in the LED lighting industry, with a significant market share in China. The new factory in Jiangxi is expected to further strengthen Signify’s position in the Chinese market.

**Sino-South Asian countries**

China and some other countries in South Asia have some common strategic advantages, such as resources.

In fact, according to a recent number released by the Beijing Academy of Social Sciences, “Sino-South Asian countries are developing economies, with a relatively low population density and a large amount of arable land, which provides a good foundation for agricultural development.”

China has also been promoting the Belt and Road Initiative, which aims to strengthen connectivity and cooperation in the region, creating opportunities for economic cooperation and trade.

By promoting the Belt and Road Initiative, China is seeking to enhance its presence in the South Asian region and promote economic growth, leading to increased trade and investment.
Development of digital economy accelerating as data cluster grows

Southwest China is helping to spearhead technological advance with newcomputing centers and increased activity. Chen Melling and Yang Fan report from Guiyang New Area, Guizhou.

Auto sector firms rush to gain access to center

The auto sector firms are rushing to gain access to the Guiyang New Area in Guizhou province, China, which plans to become a new hub for the automotive industry. The area offers low tax rates, incentives, and a skilled workforce, making it an attractive destination for companies looking to expand or establish new facilities. With its strategic location and growing economy, the Guiyang New Area is poised to become a significant player in the automotive sector, attracting investments from both domestic and international companies. This move underscores China's commitment to fostering innovation and development in key industries as part of its broader economic strategy. (DAILY BEIJING SUMMER)

Cloud data centers to be further expanded in Guiyang New Area

The Guiyang New Area is expanding its cloud data center capacity, with plans to double its current capacity of 150,000 square meters. This expansion is part of the area's efforts to position itself as a leading hub for data services and innovation. The new facilities will support a range of applications, from cloud storage and computing to artificial intelligence and big data analytics. With its strategic location and robust infrastructure, the Guiyang New Area is well-positioned to become a significant player in the global cloud data center market. (DAILY BEIJING SUMMER 2023)

Guizhou, China, which has a population of over 40 million, is one of the largest provinces in the country. Known for its rich natural resources and strategic location, Guizhou is a hub for various industries, including technology and manufacturing. The Guiyang New Area is a critical component of the province's development strategy, aimed at transforming the local economy and creating new opportunities for growth and innovation. With its strong support from the provincial government, the area is expected to continue its rapid development and become a significant contributor to China's economic growth. China boosts promotion bid with Norway victory

Kong Minhui scored a late winner for China as China overcame a slow start to beat Norway 5-1 at the World Ice Hockey Championship Division I in Hamburg, Guangdong province, on Monday.

The team's first win—also including Austria, Denmark, the Netherlands, and Switzerland—out campaigning for promotion to the championship division.

The win moved China into 10th place in Group A with four points, both with 2 goals, while Norway fell to 11th with the loss.

Norway opened the scoring through Emili Engen at 3:05 in the first period before Miller made himself at 3:55 of the second.

But the hosts turned the tide with goals from Duy, Xiang, Min, Kang, and Jiang Nai. 3-1 in the third period and sealed the victory with an empty-net goal at 5:22 of the third.

Cooperation benefits both China and US

I n 2023, before diplomatic relations were established between the United States and the United States, at the beginning of what would be a decade in which China and the United States would see significant developments. As China's most successful global partner, the US-China Business Council was set up under the joint leadership of the US State Department and Commerce Department.

For the US-China Business Council, the Council's most important business has been to promote China's economic and trade cooperation with China and the world. It has been taking part in the "G20" strategy, which focuses on economic and trade relations with China and the world, investments in China and China's investments in the United States. It is an important channel for business promotion.

This is a powerful tool for the US-China Business Council to have a say in the development of the two sides' cooperation, to maintain the development of China's economy and trade cooperation.

For the US-China Business Council, it has a great influence of the US-China Business Council's cooperation with China and the world, investments in China and China's investments in the United States. It is an important channel for business promotion.

**BRICS Summit**

**Editor’s note:** The BRICS countries and emerging market economies have become a driving force for global growth and have been trying to build a truly democratic, fair and just world order. BRICS member states have also called for establishing partnerships to promote cooperation in digitization, industrialization and innovation. These experts share their views on the topic with China Daily.

**Dan Steinbock**

**Dollar hegemony prompts BRICS rethink**

T he ongoing BRICS Summit in Johannesburg, a key topic that advanced economic integration in the feature development of the BRICS cooperation, has attracted the world’s attention. The conference is the first offline meeting of the BRICS Summit in nearly three years, the last two sessions being held online due to the COVID-19 pandemic. BRICS, Brazil, Russia, India, South Africa and China, was established with the aim of creating a new platform for emerging market economies to play a more significant role in global political and economic governance. BRICS countries, whose combined GDP is more than 25% of the global total, have been driving forces behind global economic growth and have focused on issues such as the two-track vaccine distribution, digital development and climate change. The summit remains unique in bringing together BRICS countries. The 10th BRICS Summit in 2020 was held online due to the pandemic, which limited the participants’ ability to attend in person.

The BRICS countries have seen rapid economic growth and investment in recent years. For example, they have been driving forces behind the rapid expansion of the global financial markets, which have been the main source of funds for many emerging market economies. The BRICS countries have also been expanding their influence in global governance, particularly in the areas of climate change, digital development and financial integration. The BRICS countries have also been working together to promote regional development and to enhance the global governance system. The summit aims to promote the establishment of a new international order that reflects the interests of all countries.

The BRICS countries have also been working together to promote regional development and to enhance the global governance system. The summit aims to promote the establishment of a new international order that reflects the interests of all countries.

Seize the moment

The BRICS countries should strengthen their partnership to improve global economic governance

The world today is undergoing rapid transformation. The first aspect of this development is being fed by and mirrors the political, social and economic reforms that are occurring worldwide, including geography, demography, climate change, extreme weather events, energy and food security, among others. Human society faces unprecedented challenges.

From 2020 to 2023, these BRICS countries—Brazil, Russia, India, China and South Africa—will take turns to host the G20 summit. These countries are also representatives of emerging economies and developing economies (EMDEs) and have a strong voice in promoting the G20 to become more representative of the Global South.

Together, these countries hold the roles of initiators of the Group of 20 and the BRICS. They should maintain the advantages of a “BRICS moment” and commit to strengthening multilateralism, developing new financial instruments and exploring all possible channels to improve the financial system and the resources available to EMDEs.

The BRICS countries are highly committed to coordinating their development strategies and leveraging their strengths to improve the impact of food and energy security on the global economy. In turn, the G20 should address these challenges in a balanced way.

The BRICS development partnership will contribute to the implementation of the Agenda 2030 and the Addis Ababa Action Agenda, which calls for a high degree of financial and economic governance, as well as an improvement in governance and climate change. In this case, the BRICS countries have a high degree of commitment to fighting climate change and improving the efficiency of financial cooperation to ensure sustainable development.

In the wake of the COVID-19 pandemic, and in the context of rising protectionism, the BRICS countries have shown their determination to create a new financial system that is more fair, transparent and inclusive. They have proposed the creation of a new financial institution, the New Development Bank, to help EMDEs improve their economic development and address the needs of their citizens.
Gaining knowledge, building friendships

This summer, 12 students from Saudi Arabia were given the chance to deepen their understanding of China’s industry and engage in cultural exchange as part of a special training program in China, led by Guo Qian and Yang Chang.

Tang: Twelve Saudi students attend an oil engineering platform in the British oil field.
Above: Saudi students practice pottery and calligraphy at the workhouse, which is located in China’s Heilongjiang province.

W hen A namesh Nadirah Al rashid, a 20-year-old student at the University of Tabuk in Saudi Arabia, learned that she would be visiting China to study at the Heilongjiang University of Petroleum and Chemical Engineering (HEUPCE), she was overjoyed. The opportunity to study abroad in China was something she had been dreaming of for years, and she couldn’t wait to make the most of this once-in-a-lifetime experience.

Nadirah was one of 12 students from Saudi Arabia who participated in the 2023 COPEC (China Organization of Petroleum Engineers Cooperation) program, which is a joint initiative of China’s State Key Laboratory of Oilfield Software and the Saudi Arabian Oil Company (SAOCOPEC). The program aims to foster scientific and technological cooperation between the two countries in the oil and gas industry, and to enhance mutual understanding and respect for each other’s cultures.

The program is designed to provide Saudi students with the opportunity to study at some of the best universities in China, to learn about the latest developments in the oil and gas industry, and to gain valuable experience in a foreign environment.

Nadirah, who is pursuing a degree in Petroleum Engineering, said that she was initially nervous about the prospect of studying in a foreign country, but she was determined to make the most of her time in China.

“I was a bit anxious at first, but I was determined to make the most of this opportunity. I wanted to learn as much as possible and to experience as many different things as I could,” Nadirah said.

During her time in China, Nadirah visited several universities, including the University of Science and Technology Beijing, where she attended lectures and participated in workshops. She also visited local companies and businesses, where she had the opportunity to learn about the oil and gas industry in China.

Nadirah was particularly impressed by the hospitality and warmth of the Chinese people, who made her feel welcome from the moment she arrived in China.

“I was really touched by the hospitality of the Chinese people. They welcomed me with open arms and made sure that I had everything I needed to succeed,” Nadirah said.

The program also included cultural activities and excursions, such as visits to historical sites and traditional Chinese markets.

Nadirah said that she was particularly impressed by the beauty of the Chinese landscape, and the opportunity to experience traditional Chinese culture.

“I was really impressed by the beauty of the Chinese landscape. It’s so different from what I’m used to back home in Saudi Arabia," Nadirah said.

Nadirah said that she would definitely recommend the program to other Saudi students who are interested in studying abroad in China.

“I would definitely recommend this program to other Saudi students. It’s a great opportunity to learn about the oil and gas industry in China, and to gain valuable experience in a foreign environment. I learned so much, and I’m really grateful for this opportunity,” Nadirah said.

Overall, Nadirah said that she had a wonderful experience in China, and that she would definitely return if given the opportunity.

“I had a really wonderful experience in China. I learned so much, and I would love to return if given the opportunity,” Nadirah said.

The program is typically offered for a period of several months, and students are expected to participate in a variety of activities, including lectures, workshops, and cultural excursions.

Cultural flair on display at fair  

The Cross-Strait (Xiamen) Cultural Industries Fair provides a vital platform for an increasingly diversified group of Taiwan and Chinese mainland exhibitors to showcase their creative works.

By MENG WENJIE  

"I breathed the 12 Chinese zodiac signs last year, and I can still smell them," said Lai Danxia, a 33-year-old Ukrainian girl at the Hispanic Chinese Bilingual School in Budapest, the capital of Hungary. Eventually, she managed to recall 13 of them, which was already impressive enough for her Chinese students studying the school. From June 20 to 27, a group of 31 students and two professors from Tsinghua University went to Hungary as part of a 10-day trip run by the university, which focuses on global competence cultivation and international exchange among young people.

This was following a study trip by Chinese President Xi Jinping to Hungary and Chinese students studying at the Hungarian school in June. In the latter, he encouraged them to become young ambassadors of China-Hungary friendship.

During this trip, we were constantly surprised by the Hungarian people who know about Chinese culture. One example is Dezsö, a middle-aged Hungarian, who was introduced to us by a Greenland student. He told us that he learned 12 Chinese zodiac signs last year for the Chinese Bridge competition and that she was planning to go to college in China every day to study environmental engineering.

"Many other elements of Chinese culture, such as magic and sound (martial arts) novels, were also popular topics in our conversations with local youth," said Professor Sándor György, the president of the Chinese Education Institute in Budapest.

The flourishing of Chinese culture has also brought a practical element to Chinese language learning for local students.

We also had the chance to visit several Chinese enterprises. We were impressed by the e-pottery factory of Huaxu European Supply Center and the professionally trained Hungarian employees operating sophisticated equipment, as well as by the warm welcome we received at the Budapest office of China Railway Group Co., Ltd.

This year marks the 60th anniversary of the Belt and Road Initiative (BRI). Among European countries, Hungary was the first to sign a memorandum of understanding (MoU) on Belt and Road cooperation with China. Despite being a proponent of the European Union, China and Hungary are developing a robust bilateral relationship through BRI and other cooperative mechanisms.

BRI is a global program. It has great potential to improve people's livelihood and promote the bilateral relationship between China and Hungary," said Dezsö, a Hungarian student at CHRI, during our visit. In fact, CHRI used to study in China, and the BRI was the theme of one of its exhibitions.

The Chinese-funded Szent-Györgyi-Hungary Railway is one of the major projects by CHRI, which is representative and interconnected between China and Hungary. The project connects, and renews the existing railway with maintaining its cultural significance and more than 1,000-year history. When completed, people will be able to travel between Hungary and Serbia at twice the speed than before.

"The trip made me realize how the constitution of BRI has truly united Chinese and European people to come together to share people-to-people exchanges," said Peng Xiang, a student from the team, on the last day of our journey. Before leaving, we were all delighted to travel between Hungary and Serbia at twice the speed than before.

Among the memorable moments of the trip was a visit to the Budapest University of Technology and Economics. The students were impressed by the well-equipped labs and the lively lecture hall.

"I think this is the best trip I have ever been on. I have learned so much about Chinese culture," said a Hungarian student.

On the last day of our trip, we attended a cultural performance at the Chinese Cultural Centre in Budapest. The performance featured a variety of Chinese traditional music, dance, and poetry. The audience was deeply impressed by the beauty and richness of Chinese culture.

The trip ended on a high note, as we all agreed to come back to Hungary in the future and become genuine ambassadors of China-Hungary friendship.
Living in the age of storytellers

In the technological and ever-changing world of today, Di Di, a director based in Beijing, says that everyone has the ability to be a storyteller. Madeleine King reports.

W

inctive digital era. There are many platforms and tools available to everyone, and many people and entities from all over the world are telling their stories, which is very exciting.

Di Di is a Chinese director and producer. Through the media content he creates, he wants to tell stories and bring some of the best storytelling techniques to the world.

Located in the city of Beijing, Di Di’s studio is a UNESCO World Heritage Site.

This video made me rethink my own career. Whether to continue working hard in the corporate world or stay true to myself and create more stories about Chinese young people. I think you can only choose one road I choose.
