Maduro expresses faith in BRI, Huawei's visit to its departure

Relevance of G20 meeting distorted by politicizing

By ZHANG YUNH
zhanyunh0215@163.com

Venezuelan President Nicolas Maduro did not hold high expectations on Thursday when announcing consultations on the outcome of the state visit to China. Speculating to media representa-
tions that both nations are in Latin
American country's minority in the
Global South, he highlighted that
in order to prevent the visit to China and also show a personal note when discussing his walking style in the media.

Walking in a row of theHuawei office at the new conference, he exhibited the new device, with its large screen despite a photo of the first
President Xi Jinping shaking hands with him.

AI: China leads the world on research

From page 1

Ling, who appeared at the China Central TV Spring Festival Gala, has more than 1 million followers on the sina Weibo social media platform. Tong also created the virtual idol Ling Yantian, who drew millions of viewers during a livestream broadcast on the Douyin review site.

A recent study conducted by Nikkei in collaboration with Sony AIPublisher Elsevier showed that China is the world leader in artificial intelligence research, with the number of AI-related papers leading the nation rankings of the United States.

Xinhua News Agency reported that many industry experts have said that they hope that China will become the world leader in AI by 2030.

On Aug 15, the Cyberspace Administration of China and its six other government departments issued an interim measure for the management of generative AI services, stating that the innovative application of generative AI technology in various fields is greatly encouraged.

In parallel with the booming AI sector, companies and governments in Hangzhou, Zhejiang province, China’s largest livestreaming hub, have been establishing the use of AI-generated hosts for use in livestreaming.

Data from the Zhejiang Provincial Department of Commerce show that Hangzhou is home to 92 livestreaming platforms and nearly 50,000 livestreamers. More than 5,000 livestreaming-related startups are registered in the city, which is called Zhejiang.

One of the main challenges facing the city is reducing the costs associated with building livestreaming rooms and towers while attracting more online users. The emergence of AI hosts has been tested as an ideal solution.

Dubbed ‘virtual’ or ‘non-human’ livestreaming models, AI hosts offer benefits including the ability to work 24 hours a day. Such hosts emerged as early as 2019, but issues such as poor image quality and stiff facial expressions meant that they were not widely used.

However, the development of new technologies in the past two years has dramatically improved the quality of such virtual hosts and made them viable replacements for their human counterparts.

Qianxun Holdings, one of China’s top virtual entertainment companies, recently launched an AI host service and is competing with other similar livestreaming service platforms.

Tong Xiling, a partner at Qianxun Hol-dings and CEO of Qianxun hold-ings, said at the launch that the digital hosts could generate a lot of facial images collected from humans. Although such a process is costly and difficult, the virtual characters created are significantly ‘nicer’ than those of a human.

Qianxun Holdings has also cooperated with Nujii (Guilin) Intelligent Technology Co. to improve virtual host’s interaction capabilities.

Major companies, including Alibaba, along with AI technology manufacturer DeepMind, have used Qianxun’s technology to improve their products through livestreaming.

Tong said it costs more than 100,000 yuan (US$14,000) per month to train a traditional livestreaming room complex with a dozen workers and equipment. On the other hand, a virtual livestreaming room hosted by a virtual host costs only several thousand yuan to operate. Furthermore, only one or two people are needed to manage the room.

Data collected by Qianxun show the performance of virtual hosts in terms of engagement volume, average view duration, number of viewers, and transaction rate is the same as, if not better than, that of human hosts.

Other Chinese companies, such as SavorEat and BaiduTime, are also launching similar virtual hosts in order to reduce cost by using AI to build virtual hosts that can work around the clock, while numerous cross-border e-commerce merchants are also turning to virtual hosts to sell their goods on Alibaba.

The authorities in Hangzhou have also been encouraging local livestreaming companies to exploit this new business model. Earlier this year, the Zhejiang provincial authorities also encouraged companies to look at the use of virtual hosts to boost development of an e-commerce livestreaming.

Office tasks

In addition to livestreaming, virtual hosts can also be used as employees to help with recruitment and other office tasks. During the 2023 DING·Talk conference held in late July in Shanghai, Yu Jia, CEO of BaiduGroup, held a live demonstration of its new digital employee. Yu said how this virtual assistant can create recruitment advertising material, publish it on websites and platforms, collect and sort resumes, and schedule interviews.

“With just one click, you can post job openings, send messages to candidates, and schedule interviews in minutes,” Yu said.

The virtual assistant can also help with talent acquisition and onboarding tasks, such as scheduling interviews, sending welcome messages, and conducting employee assessments.

On college campuses, SavorEat provides students with a virtual assistant that helps them to complete tasks such as registering for classes, finding housing, and attending events. The virtual assistant can also help students stay organized and on track, ensuring they never miss a deadline.

SavorEat’s unique mission is to bring customizable plant-based solutions to campuses to help students lead healthier, more sustainable lives.

Helicopter begins mass production

By ZHAO LEI in Tianjin
zhaolei@chinadaily.com.cn

Aviation Industry Corporation of China, the nation's leading aircraft manufacturer, has started mass production of its AC352 multi-purpose light utility helicopter and plans to deliver them to users in 2024, according to a management report.

"The assembly of the first mass-produced AC352 has been initiated at our manufacture facility in Zhuzhou to make it possible to meet the delivery deadline," said Yang Aihua, the aircraft type production certification chief of the manufacturer.

The AC352 was designed to meet the needs of customers who require a mid-sized utility helicopter. It can be used in a variety of roles such as search and rescue, emergency response, personnel transportation, medical air- and land-based facilities.

The AC352, with a design, certification and development by four design institutes under AVIC and Airworthiness Office, will be delivered to the first customer in the year-end 2023. It has a range of over 1,200 kilometers and can carry up to 10 passengers.

"With an altered plan, we can ensure 60 150 meters, 40 passengers or supplies with a combined weight of 400 kilograms," said Wu Peixin, an aviation industry expert in Beijing.

The AC352 helicopter will carry passengers and cargo weighing 800 kilograms, capable of taking off from a grass-covered heliport, and can be used for personnel transportation. The AC352 has a more comfortable and environmentally friendly cabin, according to AVIC.

"Formerly, two pilots could transport up to 18 passengers inside the helicopter," said Wu. "The AC352 will be more efficient in such a situation.

"Another advantage of the AC352 is that it is a multi-functional helicopter designed for commercial and military flights.

"In addition, the AC352 is designed for civil and military operations. It is equipped with a 1,200-meter take-off distance, making it ideal for deploying the machine in various environments.

"The AC352 helicopter is not only designed for civil and military operations, but also for disaster relief and emergency response. The AC352 is designed to carry out complex missions in a variety of environments," said AVIC.

The AC352 helicopter is capable of carrying 1,200 kilograms of cargo or 20 passengers over 800 kilometers.

"The AC352 will be a cost-effective solution for civil and military operations, especially in areas with limited infrastructure," said AVIC.

The AC352 is the third model in the AC300 series, which includes the AC311 and AC312 helicopters. The AC300 series is designed for multi-role operations, including search and rescue, personnel transportation, and medical evacuation.

"The AC352 is a multi-purpose light utility helicopter designed to serve as a backup for the AC311 and AC312 helicopters," said AVIC.

"The AC352 is designed to meet the needs of customers who require a mid-sized utility helicopter. It can be used in a variety of roles such as search and rescue, emergency response, personnel transportation, medical air- and land-based facilities.

"The AC352 has a more comfortable and environmentally friendly cabin, according to AVIC. It is designed to carry up to 10 passengers inside the helicopter, with a range of over 1,200 kilometers.

"The AC352 has a maximum take-off weight of 4,000 kilograms, and it can carry up to 20 passengers or 4,000 kilograms of cargo. It has a maximum speed of 340 kilometers per hour and a maximum range of 2,000 kilometers.

"The AC352 has a range of over 1,200 kilometers and can carry 20 passengers or 4,000 kilograms of cargo. It has a maximum speed of 340 kilometers per hour and a maximum range of 2,000 kilometers.

"The AC352 has a range of over 1,200 kilometers and can carry 20 passengers or 4,000 kilograms of cargo. It has a maximum speed of 340 kilometers per hour and a maximum range of 2,000 kilometers.

"The AC352 has a range of over 1,200 kilometers and can carry 20 passengers or 4,000 kilograms of cargo. It has a maximum speed of 340 kilometers per hour and a maximum range of 2,000 kilometers."
BRI to boost China ties with ASEAN, Mideast

By JAN YUCHUN, YANG YAN and ANNA FANTONE

Beijing has reached several partnerships with the Belt and Road Initiative in recent China-South East Asia and the Middle East, said Sun Longgang, said Sun Longgang.

The special administration region hosted the 5th Belt and Road Forum and related events to mark the 10th anniversary of President Xi Jinping’s proposal for jointly building a closer China-ASEAN alliance community with a shared future and the Belt and Road Initiative.

ASIAN Secretary-General Kao Kin Huey, noting there are many BRI-related projects taking place in different ASEAN member states, said the bloc will encourage China to continue expanding its Investment in ASEAN countries through the Master Plan on ASEAN Connectivity 2025.

“The purpose is to bring greater prosperity to the people,” said Kao.

He added that he hopes the two sides can sign the Bilateral Free Trade Agreement to establish a market and more relevant to business.

To build a closer ASEAN-China community, Kao said key factors should include cooperation and collaboration, momentum, construction, and commitment.

He said he also hopes to see more people-to-people exchanges between the two sides as young people are better equipped to understand each other and work together for a shared future.

This year’s BRI summit held special forums for the MSD for the first time, aimed at introducing the BRI, said Paul Romani, director of the department of economic development, said current China is the largest and also one of the good trading partners of the UAE, which is also a positive to provide access to the African market.

Economist driver

He also said the technology sector creates a new economic driver of growth for Abu Dhabi and they were extending a warm welcome to Chinese expertise in helping fulfil their objectives.

Abu Dhabi’s bid in the region was a natural position to support China’s BRI plans, he added.

When China was seeking, so did Abu Dhabi, said Al-Ruoud.

She said that the UAE is the only country in the region with the most available capital.

Kashif Ishaq, president of the Pakistan National Federation for Investment & Export Development, added that the two sides are currently experiencing a new economy in the environmental and investment landscape, something which they like to call “Innovation 2.0” through which they can transform the traditional market.

He also noted that the two sides are not far apart in terms of the new economy, but there are many hurdles that need to be overcome.

The two sides need to work together to overcome the challenges.

Additionlly, the nation has had many huge milestones that we have to work together.

In Texas, there are ongoing talks to raise the minimum age for a person to purchase the assault-style weapon, and people are interested.

It comes over a year after a 16-year-old girl killed 13 students and two teachers at the Robb Elementary School in May 2022.

Texas Republican Governor Greg Abbott, a staunch gun rights advocate, believes raising the age would be "unconstitutional." He also said that in a time of crisis, people have the right to defend themselves.

The plan is to raise the minimum age to 21, which many people are currently working on.

At least 35 states, legal gun owners do not need to purchase a new firearm in many public places.

However, the number of states that have this law has risen since 2020, when only 16 states allowed it. Abbott signed a bill in 2022 allowing for "permit-less carry," which enables residents of the state age 18 and older to carry handguns without a license or training.

He warned that the "so-called concealed carry" bill he signed into law on June 21, 2022, will make it easier for law enforcement to stop and potentially arrest a lawbreaker.

There are 20,155 deaths involving gun use in the U.S. at least 11,105 were homicides, suicides or accidental shootings.

The majority of these were firearm-related, and 60% of all gun laws and amendments are gun-free zones that limit where people can carry a firearm among others.

Guns have killed 123 people per year in the United States since 1993.

Of the total deaths including 1,070 teenagers and 226 children, children are the main target.

**WORLD**

**Strike by autoworkers loomed late Thursday**

Detroit’s Big Three auto makers faced a midnight walkout as contacts expired.

By JONATHAN PATEL in London

With tours to end contracts early, the United Auto Workers Union and Detroit Big Three automakers have aligned for a battle before the deadline.

The United Auto Workers Union (UAW) announced that its negotiations with Detroit Big Three automakers Ford, GM and FCA are at a standstill.

In a joint statement, UAW President Ray瓅 said Thursday that union officials were in talks with Ford and Fisan who will join workers on the picket line.

Talks continued Thursday with no agreement on extensions of the current deals (GM post) increased wage offer, and Fisan was negotiating over the company’s offer from the union.

The union’s demand held over $9 per employee income over four years, and the company’s offer was $4.50 per employee.

The union’s local branches, affiliated with GM, Fisan, and FCA, will continue to operate their respective plants.

The union has been negotiating with the Big Three automakers since last month for the terms of a new contract.

The unions are demanding contracts that reflect the economic and financial challenges the auto industry is facing, including a global chip shortage and ongoing supply chain issues.

The union is advocating for higher wages, better benefits, and improved working conditions for its members.

By definition, the union is also pushing for fairer treatment of all workers in the industry, including those in supplier companies and other parts of the automotive sector.

The negotiations are taking place in the context of a broader economic landscape marked by rising inflation and ongoing supply chain disruptions.

The union’s aim is to secure a fair contract that addresses these challenges and ensures a better future for its members.

**Relevant fight**

France bans iPhone 12 sales over radiation

By JOSEPH CHENG in Shanghai

French regulators have ordered Apple to withdraw the iPhone 12 from sale after the device failed tests for electromagnetic waves that are absorbed by the body with continuous exposure over time, violating European Union standards for exposure.

The United States has taken a similar approach, with Apple having released a firmware update for its iPhone 12 models to lower the radiation levels. France, on the other hand, has banned the device entirely.

In a statement on its website, the ANFR said that it had found "significant non-compliance of the iPhone 12 with the Commission's regulations.

During tests that simulated the electromagnetic field in the hand, it was found that the device indeed exceeded the emission limits, with a peak SAR value of 32.32 mW/kg.

This is the first time that an iPhone device has been banned in Europe, following the ban in Canada earlier this year.

The ban on the iPhone 12 in France comes as the tech giant continues to face regulatory challenges across the globe, with other countries also imposing restrictions on the device.

By definition, the ban on the iPhone 12 in France is likely to have a significant impact on Apple's sales in the region, given the country's large and affluent consumer base.

**Uncover Sheshan National Tourist Resort's wonders this autumn**

By YUAN SHEXING

Sheshan National Tourist Resort, located in the Hongqiao State Park of Shanghai, is known for its wide scope of cultural and natural tourism resources. In order to increase the interest in green tourism, from a post-pandemic era to an eco-conscious era, the resort has planned a variety of eco-friendly activities and events during the Shanghai Tourism Festival, which is set to take place from Sept 16 to Oct 16.

This year, the Shanghai National Tourist Resort's autumn program will revolve around these main themes: study tour, natural beauty exploration and colorful events. To cater to the diverse needs and interests of different individuals and families of all ages and backgrounds, a wide range of activities and programs will be offered.

Additional activities will be the Youth Drive Innovation Challenge Game, providing a platform for young people to experience and explore the future of tourism. The event will involve driving different types of vehicles, including self-driving cars, drones, and other advanced technologies.

A cultural program known as 'Tours around Sheshan National Tourist Resort' will be included in the study tour, offering participants an opportunity to delve into the rich history of Shanghai. This event will showcase the unique features and attractions of Sheshan National Tourist Resort, including the natural beauty, cultural heritage, and historical significance.

Trauma hits quake victims

International aid groups mobilize in Morocco in aftermath of deadly Sept 8 disaster

When Khadija Temen, a survivor of Morocco’s devastating earthquake, was seen on a television on Tuesday, she was just one of a hundred newly admitted patients who would be sent within 24 hours.

The powerful quake on Sept 8 killed more than 1,000 people, most of them in remote villages of the High Atlas Mountains.

Beyond the physical devastation, soldiers and aid workers said it is becoming increasingly clear that many of the survivors are facing severe mental suffering.

“The most important thing is that we are alive,” Temen said, her horned fingernails gleaming with a piece of paper, her eyes swollen with pain.

International aid groups have mobilized in Morocco. The country has accepted offers of aid from Spain, Britain, the United Arab Emirates and Qatar, while the help offered from other countries is pending approval.

The International Federation of Red Cross and Red Crescent Societies on Tuesday launched an emergency appeal for $150 million to support the victims of the quake.

The most pressing need at this time are water, sanitation and shelter, Caroline Holk, global director of operations at the federation, said in Geneva. “We need to make sure that we avoid a second wave of deaths,” Holk said.

Zhang Beiling, chief of the Aga Khan unit of the Chinese medical team in Morocco, told Xinhua News Agency that the team has donated urgently needed medical supplies such as finger pulse oximeters and hand sanitizers to local hospitals.

Morocco’s King Mohammed VI visited a hospital in the city of Marrakech on Tuesday, inquiring about the recovery services and care being provided for those injured in the quake and the conditions of survivors, according to the official MAP news agency.

Joint energy projects help power up community for three decades

Experts say the supply of energy is the key to the development of the Belt and Road Initiative. By RONG LIGE in Astana

Kazakhstan's wind power plant is a big part of Astana's energy solution to the north-south imbalance and overdependence on coal use in power generation.

Ajuil Osh, managing partner of Tungsten Energy, said the wind power plant is expected to help diversify the energy mix in Kazakhstan. (Photo by RONG LIGE)

Kazakhstan together with China have stepped up cooperation in energy technology and cross-border projects in recent years. The two countries have deepened economic cooperation and set up energy-related organizations.

In 2021, the economic cooperation volume between Kazakhstan and China maintained a stable growth trend. China hosted a joint energy project to support the development of the Belt and Road Initiative.

Seven energy projects were signed between the two countries, including the Astana wind power plant and the middle Asia natural gas pipeline. The projects are expected to contribute to the energy mix in Kazakhstan and support the development of the Belt and Road Initiative.

Kazakhstan, as a landlocked country, has a large amount of energy resources such as coal, oil, gas and hydropower. Besides, the country has an abundant wind and solar energy potential, which is conducive to the development of green energy.

The Astana wind power plant is a key component of the Belt and Road Initiative, which will help Kazakhstan to better integrate into the global energy market and become a regional energy hub.

Kazakhstan has the potential to become a regional energy hub, with its vast reserves of energy resources and commitment to sustainable development. The country has set ambitious targets to reduce greenhouse gas emissions and increase the share of renewable energy in its energy mix.

The Astana wind power plant is expected to contribute significantly to the country's goal of becoming a carbon-neutral society by 2060. The project is expected to generate more than 100 MW of power annually, providing clean energy for the local community and helping to reduce CO2 emissions.

Top prizes highlight China's achievements in patented design and invention at exhibition

BY YUAN SHENGGAO

The 12th China Intellectual Property Annual Conference, which was held in Jinan on September 15, showcased China's intellectual property work and achievements in recent years, highlighting the country's comprehensive strength in intellectual property.

Conference highlights global IP innovations

BY YUAN SHENGGAO

The conference was held under the theme of "Globalization and IP Innovation: China’s Role in the World". It aimed to strengthen international cooperation in intellectual property protection and promote the development of China's intellectual property work.

The conference was opened by a keynote speech from the Director of the Intellectual Property Administration of China, followed by a panel discussion on "Intellectual Property and Innovation in the Global Context".

The conference also featured speeches from various experts and practitioners in the field, including representatives from the World Intellectual Property Organization (WIPO), the European Patent Office (EPO), and the Chinese National Intellectual Property Administration (CNIPA).

In his speech, the Director of the Intellectual Property Administration of China emphasized the importance of strengthening international cooperation in intellectual property protection and highlighted China's contributions to the global IP system. He also underscored the significance of promoting innovation and creativity in the current knowledge economy.

The conference also included a panel discussion on "Intellectual Property and Innovation in the Global Context". The panelists discussed the challenges and opportunities presented by globalization, as well as the role of intellectual property in driving innovation and economic growth.

In addition to the keynote speech and panel discussion, the conference also included a series of workshops and seminars on various aspects of intellectual property, including patent law, trademark law, and copyright law.

The conference concluded with a closing ceremony, where the Director of the Intellectual Property Administration of China announced the winners of the China Intellectual Property Awards, which recognize outstanding contributions to China's intellectual property work.

The conference was attended by over 500 participants from various sectors, including government officials, industry leaders, and academic experts. It was a significant event in China's intellectual property landscape and a testament to the country's commitment to promoting innovation and creativity.
EU Commission chief heedlessly steering bloc in wrong direction by advocating protectionism

The European Union building pre-electoral alliances next year, European Commission President Ursula von der Leyen is seeking to use a combative stance toward China, announcing anti-subsidy duties on steel imports and looking to strengthen紧张 relations. But she will also undermine the EU’s longstanding role as a beacon of free trade around the world. The development of the European Union’s industry and economy is bound to be blocked.

While she claimed that “Europe is open to competition,” the European Commission chief didn’t say that “Europe is not a place of competitive edge” giving the impression she would not mind becoming stronger when it comes to competition with Chinese EEA makers.

It is true that the European Union has seen a phenomenal surge in overseas markets recently. According to a new report by the US-China Business Council, China’s share of global foreign direct investment has jumped from 5 percent in 2010 to 9 percent in 2016, and its share of global exports has increased from 9 percent in 2010 to 14 percent in 2016.

China’s share of the global foreign direct investment market has risen from 9 percent in 2010 to 14 percent in 2016, and its share of global exports has increased from 9 percent in 2010 to 14 percent in 2016. The result is that the Chinese government has become the largest overseas investor in overseas EEA companies. There is actually much space for the Chinese and European automobile makers to cooperate. This would be more beneficially understood.

EUropian nations of the innovation are continuing to promote “national champions” to develop for free trade. If the automobile industry has invested in China for many years, and the Chinese market has become the largest overseas investor in overseas EEA companies. There is actually much space for the Chinese and European automobile makers to cooperate. This would be more beneficially understood.

Global emissions are not yet like the world’s largest polluters commit a “Pledge of Paris” to the climate. The Paris Agreement sets a new and higher standard for the world to work toward.

Rot in Washington becoming irredeemable

The Wall Street Journal reported last week that the US Senate is preparing to pass an anti-China bill that targets China’s automotive industry and financial institutions.

Chinese lawmakers are considering a bill that targets China’s automotive industry and financial institutions. The legislation includes measures to limit the use of American-made parts and to increase the use of domestic automotive parts.

Some Western media still up to their tricks

Chinese law enforcement agencies have actively engaged in joint anti-fraud operations with relevant agencies and organizations in various countries and regions. The Group of 7 and China summit, to be held in Hiroshima, Japan, has emerged as one of the few remaining major global summits. It is of keen importance for several reasons.

First, it is the first time that the Group of 7 has invited China to the table of major global cooperation. Politically, the world faces a complex interplay between the need to address the global supply-demand gap, driven by the economic situation of China and other developing countries, and the need to reduce reliance on fossil fuels and carbon emissions in some parts of the world, and related international cooperation processes. The international community is now again being called upon, albeit the choices between these processes are becoming more and more clear.

Second, it is the first time that the Group of 7, including China, is aiming to achieve major breakthroughs in industries such as the Global South and Global South, and to develop more global and economic and social benefits, but also to change the global governance system. There is a major role in pushing wars and conflicts in certain regions, and some cooperation processes, but also to contribute to safeguarding the rules of the Global South and establishing global governance mechanisms under these conditions.

Enormously, the contributions of both sides and the potential of developing countries and emerging market economies to the world, and their roles are enormous and increasing in the future. The Group of 7 will not only play an important role in developing countries, but also play an important role in the global governance system. Therefore, one's choice should be the right choice for the future of the Group of 7 and the future of the international community.

Developing countries in Asia, Africa, and Latin America are far from only narrowing the development gap and achieving global development path to achieve sustainable development and realizing the environment. Cooperation between the Group of 7 and China for years to come.

As a result, the two sides have made major efforts to improve the environment.

Liu Chang

Will Sino-US space cooperation stop at Mars?

While attending a conference in the United States recently, a top American expert on Sino-US space cooperation (during the space cooperation between the United States and China) said: The space cooperation between China and the United States is of great importance. We have already taken the first step towards this agreement. But after that, we have to work harder in order to make this agreement become a reality. The experts said that the cooperation is the only way to prevent future collisions.

China and the United States have signed a joint declaration on the prevention of collisions in outer space. The declaration aims to prevent unnecessary collisions in outer space, thereby reducing the risk of accidents. The signing of this declaration is a significant step towards the prevention of collisions in outer space, and it is a positive development in the Sino-US space cooperation. However, there are still some concerns that need to be addressed.

One of the concerns is the possibility of accidents in space. Space objects, such as satellites and rocket debris, are constantly being launched into space, and there is always a risk of accidents. To prevent such accidents, it is important to have a joint declaration that can prevent unnecessary collisions in outer space.

Another concern is the possibility of disputes in space. Space is a global commons, and it is important to ensure that all countries have equal rights to access and use space resources. To prevent such disputes, it is important to have a joint declaration that can prevent unnecessary collisions in outer space.

In conclusion, the recently signed joint declaration on the prevention of collisions in outer space is a significant step towards the prevention of accidents in space. However, there are still some concerns that need to be addressed. It is important to continue working on these issues in order to ensure a safe and peaceful space environment.

Summit proves G7-China ties stronger

Chen Wenwu

China Daily

Von der Leyen has become boring with her cheap shots at Beijing

It was an article on Wednesday, June 9, 2023, that Beijing had the most to fear from a China-US summit, according to six key leaders from the top political bureau of the Communist Party of China (CPC), the headline of the article, "Why EU spe - This long-awaited meeting was held in the capital, von der Leyen delivered her fourth and final speech as president of the European Parliament in Strasbourg, the venue for the summit, before a marathon of speeches and brass bands, and the headline of the report, "China-US summit: Von der Leyen has become boring with her cheap shots at Beijing."

Indeed, few people can remember what she said during her brash speech, except her announcement as such an anti-China investigator. Despite the extensive public attention, von der Leyen used China as a cheap weapon for political points. The summit China’s "tough talk" by von der Leyen, showed China’s "incredible positive effect", and emphasized the importance of "cheap versus China’s effective electric cars".

Most industry experts agree that China has a huge head start in electric vehicles. China has advantages in terms of scale, infrastructure, and public acceptance of electric vehicles. Von der Leyen, whose summit China’s "tough talk" may be more like a "cheap weapon", by von der Leyen, has been seen as a pro-China expert in the EU.

On the contrary, it is evident that, to the contrary, the summit China’s "tough talk" may be more like a "cheap weapon", von der Leyen, has been seen as a pro-China expert in the EU.

In that sense, the EU’s announcement of an anti-subsidy probe into Chinese EVs may seriously undermine the global climate against change. But von der Leyen did not even mention the US-Taiwan relations and its significant impact on the global climate against change. This is because the EU has been critiquing its inability to take strong action against China. But von der Leyen also showed that the "cheap weapon" issue is his top priority. The summit China’s "tough talk" was reported to be more like a "cheap weapon" by von der Leyen, to achieve her political goals.

The world has undergone many changes in the past few years. Enhanced dialogue between scholars from China and overseas is needed to build mutual understanding on many complex world issues. For this purpose, the China Watch Institute (CWI) Daily and the National Institute for Global Strategic Studies of the Chinese Academy of Social Sciences, jointly present this special column: The Global Strategic Dilemmas, in which experts from China and abroad will offer insightful views, analyses and fresh perspectives on long-term strategic issues of global importance.

GLOBAL VIEWS

Internationalizing the renminbi

A market-oriented exchange rate system, more cross-border capital flows and more effective policy tools are needed

By Emily C. Mau

In order for a currency to become the reserve currency that the country must have well-established and open financial markets, it is imperative to develop a diverse range of financial assets to invest, facilitate the free flow of foreign currency, and consequently enhance the willingness of foreign investors to hold it as the currency.

Therefore, accelerating the development and opening-up of financial markets is of great significance in promoting the internationalization of the renminbi. China’s financial market development has become the world’s second-largest after the US, with the balance of foreign currency reaching a little trillion yuan at the end of 2022.

The size of China’s derivatives market has also expanded rapidly, with more futures and options trading volume accounting for over 20 percent of the global total in 2022, ranking second in the world. China’s fintech market has also opened up. In recent years, a new trend of corning China’s financial markets with overseas markets has gradually taken shape in mechanisms such as QFLP, RQFII, Shanghai-Hong Kong Stock Connect, Cross-Border Bond Connect (CBBC), and overseas wealth management service.

Thus, China’s financial markets have made significant progress in a number of areas. Of all the 20 emerging economies, China’s foreign exchange reserves have maintained the second-highest level in the world.

However, China has a long way to go to achieve the objective of internationalizing the renminbi. China’s financial market functions need to be further improved, including the following aspects:

Regulatory flexibility. The renminbi cannot be misused by some countries, and financial risks can be fully controlled. Financial policies need to be more supportive.

Risks management. There is a need for a systemic risk management to prevent outliers from causing systemic risks.

Incentives for innovation. There is a need to introduce more incentives to encourage financial institutions to develop new products and services.

Promoting the renminbi. Efforts need to be made to improve the internationalization of the renminbi.

To achieve this, China should accelerate the development of the renminbi and internationalize it, as suggested by the Chinese government. This is a very important step to support China’s long-term development. The renminbi has been included in the list of the Special Drawing Rights (SDR) of the International Monetary Fund, which indicates that the renminbi is gradually gaining international acceptance.

This year marks the 30th financial cooperation between China and Africa. The Belt and Road Initiative (BRI) has been a key factor in this cooperation. China has become Africa’s largest trading partner, and the two sides have signed agreements on various continents, including the African continent.

In the past few years, China has attracted much attention from investors in the African continent. Many African countries are eager to participate in this cooperation, and the Belt and Road Initiative has been a key factor.

The Belt and Road Initiative is a significant development project in Africa, and it has been widely recognized as a key factor in the development of Africa. The Belt and Road Initiative has been supported by many African countries, and it has played an important role in promoting economic development in Africa.

Foreign automakers buoyed by recovering China market

BY LI YUNWEI

Upstream lithium miners in China are building new factories, signaling a potential increase in supply that could ease tight markets globally.

On Wednesday, China’s Tianqi Lithium Industry Group and Neomei Group signed an agreement with Singapore-based miner Lithium Power to build a lithium hydroxide plant, with an annual output of 80,000 metric tons in the latter’s home province.

Tianqi said it expects to explore new lithium resources through joint ventures and expand its control over its share of the automobile market.

Prior to the Tianqi deal, smart

Lithium miners, NEV makers win vote-win-ups

China will ratify a new set of Basel III standards and a revised set of Basel II standards, which have been in place since 2010.

The new standards, which are part of the International Monetary Fund’s (IMF) General Agreement on Trade in Services (GATS), will come into effect on October 1, 2023.

China is one of the largest economies in the world, with a population of over 1.4 billion people. The new standards will have a significant impact on China’s financial industry, particularly in the areas of capital requirements and risk management.

The new standards are expected to result in higher capital requirements for banks and other financial institutions in China. This will likely lead to higher costs of funding for businesses and individuals, which could affect the overall economy.

China’s financial sector has been growing rapidly in recent years, with many banks expanding their operations both domestically and internationally. The new standards will likely result in increased scrutiny of these banks’ risk management practices.

The new standards also include a number of provisions aimed at improving the resilience of the financial system in the event of a crisis. These include requirements for banks to hold more capital and to be better prepared to withstand shocks.

In addition, the new standards will include provisions aimed at strengthening the supervision of the financial sector. This could result in increased regulatory requirements for banks and other financial institutions in China.

Overall, the new standards are expected to result in a significant increase in the capital requirements of China’s financial sector.

Policy steps to sustain trade momentum

Fine-tuning of measures, targeted moves will address industry concerns

The new standards, which are part of the International Monetary Fund’s (IMF) General Agreement on Trade in Services (GATS), will come into effect on October 1, 2023.

China is one of the largest economies in the world, with a population of over 1.4 billion people. The new standards will have a significant impact on China’s financial industry, particularly in the areas of capital requirements and risk management.

The new standards are expected to result in higher capital requirements for banks and other financial institutions in China. This will likely lead to higher costs of funding for businesses and individuals, which could affect the overall economy.

China’s financial sector has been growing rapidly in recent years, with many banks expanding their operations both domestically and internationally. The new standards will likely result in increased scrutiny of these banks’ risk management practices.

The new standards also include a number of provisions aimed at improving the resilience of the financial system in the event of a crisis. These include requirements for banks to hold more capital and to be better prepared to withstand shocks.

In addition, the new standards will include provisions aimed at strengthening the supervision of the financial sector. This could result in increased regulatory requirements for banks and other financial institutions in China.

Overall, the new standards are expected to result in a significant increase in the capital requirements of China’s financial sector.
Property sector showing signs of recovery

Recently seen upswing supported by latest raft of favorable policies targeting sluggish sales of residential units

By LU YUKUN
luyscientist@chinadaily.com.cn

Just two weeks after Beijing launched policy measures to warm up the property market, real estate agents Wu Lei felt the change.

Potential clients who usually bracketed him aside started visiting his office with inquiries, while in the past, engaging in a conversation longer than three sentences had been a challenge.

On the evening of Sept. 7, both Beijing and Shanghai adopted a policy to recognize households with mortgage records but no local property ownership as first-time homebuyers, making them eligible for favorable down payments and lower mortgage rates.

By then, all four first-tier cities — including Guangzhou and Shenzhen in Guangdong province — had adopted such a policy.

“I was called back to work that night after regular hours. Some salespeople were even instructed not to close the shop. Since then, my phone has turned into a 24-hour line as clients have rushed to make up their missed opportunity to buy,” said Wu, who works in Beijing’s real estate agency RE/MAX.

So far, more than 20 cities, including the four first-tier cities, have adopted the new policy on identifying first-time homebuyers. Various regions have also introduced a combination of encouraging policies, such as adjusting the down payment, tax subsidies and reduced mortgage interest rates.

According to realty market analysis provider China Index Holdings, after the policy implementations, since late August, the market recovery has increased by 15 percentage points, with significant improvements seen in Beijing, Shanghai, Guangzhou and Shenzhen, where the first-time buyer increase was around 20 percentage points.

In the past week, Beijing’s sales were 15 percent higher, with new home sales rising to 3,956 square meters. Shanghai saw a 9.5 percent rise, sales volume up to 18,400 sq. m. during the same period, according to China Index.

Experts said recent policies are helping up apartment sales and helping drive transactions for high-end and luxury apartments, which in turn supports the overall real estate sector and contributes to the overall economic rebound.

Unfavorable policies have been successfully introduced in time, like reducing property speculation and mortgage interest rates and adjusting eligibility standards.

These measures are very conducive to reducing the costs associated with buying homes and increasing enthusiasm for buying new apartments, said Yan Yuefu, research director of Shanghai-based I-House China Resarch and Development Institution.

“The entire market is showing some positive signs of a steady recovery. This may help boost sales during the traditional peak period of September and October,” he said.

Moreover, Chinese housebuyers will not consider improving property tax, which means, Yan said, the tax, possibly decreasing the market sentiment at least temporarily, will not appear in the plan for legislation for at least three years.

Property taxes weren’t mentioned in the recently released legislative plan by the National People’s Congress Standing Committee on Sept. 7.

This, together with the recent slew of stimulus policies, will help increase property sales and multifamily and real estate market, which will provide a boost to the national economy, he said.

“An increase in property sales will also trigger a substantial influx of funds for real estate developers, which will have a positive impact on their business operations,” he said.

Daor folk singer finally finds her rhythm

URUMQI — Cai Tingting, 69, still cherishes a fond childhood memory of hearing a traditional folk song of the Daor ethnic group that used to play in the Xinjiang Uygur Autonomous Region, which is located in the far west of China.

Born in the late 1950s, Cai belongs to the Daor ethnic group and was raised in a small town near the Xinjiang Uighur Autonomous Region. She started learning the folk music of the Daor people at a young age, and was deeply influenced by it. When she was a child, she was often inspired by the beautiful melodies of the folk songs of the Daor people.

Cai said she has wanted to return to her roots and bring back the folk music of the Daor people for many years. She has been working to promote the folk music of the Daor people through various means, including conducting research on the history of the Daor and organizing folk music performances.

“Through my work with the Daor people, I have learned to appreciate the rich cultural heritage of the Daor and the importance of preserving their folk music,” Cai said.

In recent years, Cai has been working with local authorities to organize folk music festivals and concerts, and has also been working with local universities to conduct research on the folk music of the Daor.

Cai said she is hopeful that her efforts will help to bring back the folk music of the Daor people and promote the cultural heritage of the Daor.

“I believe that the folk music of the Daor people has a unique charm and is an important part of China’s cultural heritage. I hope that through my work, I can help to bring back the folk music of the Daor and promote the cultural heritage of this ethnic group,” Cai said.

She is currently working with local authorities and universities to organize folk music festivals and concerts, and is also conducting research on the folk music of the Daor.

“Through my work, I hope to bring back the folk music of the Daor and promote their cultural heritage,” Cai said.

Cai said she is also working with local schools to introduce the folk music of the Daor into the curriculum, and is hoping to inspire a new generation of Daor students to learn and appreciate their cultural heritage.

“I believe that through education, we can help to bring back the folk music of the Daor and promote their cultural heritage,” Cai said.
