**China's path to modernization inspires world**

Analysts laud nation’s supply chain system, strong logistics, big market and govt policies

**By MA Shun**

Chinas efforts to build a modern industrial system will help the world lower down and with potential future disruptions in supply chains, and will enable the smooth running of the global economy and industries, according to experts.

By elaborating on the industrial modernizing process and the economic recovery, they said China holds great strength for multilateralism, because the country boosts a robust supply chain system, a strong logistics system, a big market and reasonable government policies that spur innovation.

The modern industrial system has become a key phrase in China, with the deep leadership highlighting it as a priority for the country’s economic development and a key to underpinning modernization.

From experts, it has emphasized that a modern industrial system is the foundation of technological modernization of a country. Moreover, the backbone of economic development should be placed on the real economy to provide solid material support for China to realize the Second Centenary Goal, which is to lead China into a modern socialist country that is prosperous, strong, democratic, culturally advanced, harmonious and beautiful by the time the People's Republic of China celebrates its centenary in 2049.

In a world marked by global interdependences, international partnerships have the capacity to influence the flow of states. China and the Association of Southeast Asian Nations are at the forefront of such collaborations, endlessly working to ensure a community with a common future.

One of the latest symbols of this close multilateral relationship is the opening of the Jakarta-Bandung High-Speed Railway, a monument to China’s construction and Marxist philosophy.

The project is part of the Belt and Road Initiative, which China has put forward to revitalize and boost economic development in the region. By invoking the principles of the idea, this mega-infrastructure project is believed to generate a number of jobs directly related to the project.

Cinemas: More advanced screenings boost sales

"If the nation’s annual box-office takings surpass 60 billion yuan by the end of this year, it will enhance confidence in the industry and encourage talent to produce more quality movies."

Rao Shuangjun, president of the China Film Critics Association

**Crescendo from top left:** Fantasy Film Creation of the God E: Kingdom of the Beasts, a fantasy epic adapted from a Ming Dynasty (1368-1644) novel, premiered in Shanghai on July 9; **Crescendo from right:** The Peking Opera, a classical Chinese opera, has been successfully adapted for modern cinema. It was screened in China on July 30.

**Graphic Credits:**
Examiner, the industry magazine of the China Film Critics Association, recently published an article entitled "Cinemas: More advanced screenings boost sales." The article discusses the increase in advanced screenings and the impact they have had on the Chinese film industry.

The article highlights the success of "The Peking Opera," a classical Chinese opera adaptation, which opened in China this July. The film, which was produced by China Film Group, has been well-received by audiences and has helped boost the confidence in the industry.

The article also notes that the success of "The Peking Opera" is part of a broader trend in the Chinese film industry towards more advanced screenings. The article states: "If the nation’s annual box-office takings surpass 60 billion yuan by the end of this year, it will enhance confidence in the industry and encourage talent to produce more quality movies." - Rao Shuangjun, president of the China Film Critics Association.

The article goes on to discuss the benefits of advanced screenings, including increased takings and the opportunity to reach a wider audience. It notes that the trend towards more advanced screenings is likely to continue, as more filmmakers and distributors see the benefits of offering higher-quality experiences to audiences.

The article concludes by discussing the potential impact of the increasing number of advanced screenings on the Chinese film industry. It notes that the industry is likely to continue to see growth in the coming years, as more filmmakers and distributors see the benefits of offering higher-quality experiences to audiences.
Top 50 private companies see revenue growth

Report shows increase in R&D investment by enterprises, rise in ranking threshold

By CHENG YU chengyu@chinadaily.com.cn

The top 50 Chinese private companies have increased their revenue earnings and are increasingly investing in innovation and development, as they strive for more sustainable growth, according to a report released on Tuesday.

According to the annual report by the All-China Federation of Industry and Commerce on Tuesday for 2021, among the top 50 private enterprises serving the state sector, the country’s leading 50 private enterprises registered revenue of 46.65 trillion yuan ($7.17 trillion) last year, which represents a 3.94 percent year-on-year growth.

E-commerce company JD topped the list with revenue of 755.7 billion yuan, followed by e-commerce and tech heavyweight Alibaba Group with 646.4 billion yuan. Baidu Group with 612.5 billion yuan and nanotechnology enterprise Amperex Technology International Group with 636.8 billion yuan.

In terms of R&D investment, tech company Tencent ranked first in terms of R&D expenditure of 18.6 billion yuan, followed by Huawei with 15.3 billion yuan and Xiaomi with 14.8 billion yuan.

BioNTech Technologies, which topped the ranking in terms of R&D expenditure of 119.3 billion yuan, said that 90 percent of its employees are independently developing the company’s drugs.

Fang Wenjia, chief economist and director of the National Capital Corp, said: “China’s economic development is driven by strategic innovation and technological innovation in the future as economic development continues to slow down. To achieve technological progress and economic development, China must focus on independent innovation, develop more independent innovation capabilities, and create more high-quality innovation enterprises.”

An industry group of Hong Kong, Macao, and Taiwan (2020-2021), the country will scale up R&D spending by more than 7 percent annually to drive more technological breakthroughs.

The report by the Chinese private companies also displays a robust picture of their future development. A total of 1,000 companies are expected to see revenue of 10 billion yuan or more in 2021, according to the report.

The renovation of the 2021 report includes much more content related to the 14th Five-Year Plan for 2021-2025. It also provides an analysis of the development status of the top 50 private companies and the expected situation of China’s economy.

The report shows that enterprises are committed to innovation, science and technology, and they have increased R&D investment in recent years.

The top 50 private companies have increased their revenue earnings and are increasingly investing in innovation and development, as they strive for more sustainable growth.

Unity: Economic synergy has fostered a climate of mutual benefit

One of the most attractive fruits of China-ASEAN cooperation is the beginning of a new era of economic and technological collaboration. This development has been accompanied by a number of regional initiatives that are enhancing the mutual benefits of the relationship. According to data from China’s Ministry of Commerce, the trade volume between China and ASEAN reached a staggering 4.86 trillion in 2022, representing an impressive 12.2 percent year-on-year growth.

China is the ASEAN’s largest trading partner, and the ASEAN is China’s second-largest trading partner. In 2022, China and ASEAN conducted a total of 44,290 exports and imports, with a value of 3.72 trillion yuan, up by 14 percent year-on-year. The rise is mainly driven by increased exports of electronic products, machinery, and medical equipment.

China and ASEAN are expected to see significant growth in the coming years. The two regions' long-term economic cooperation is expected to continue to grow, driven by China’s Belt and Road Initiative and ASEAN’s 2025 Vision.

Policy Review

Disabilities battle making progress

Prevention and rehabilitation for disabilities are vital to improving public health, especially for children, and the government has attached great importance to it.

The central government has released guidelines to encourage and guide the repair of medical facilities in villages and communities, and is promoting a comprehensive development of rehabilitation services.

The National Health Commission stipulates that the rehabilitation service level of each medical facility should reach the standards set by the Health Ministry, and that the daily work of the medical facility should emphasize the role of family, community, and workplace in the rehabilitation process. The Commission also emphasizes that the rehabilitation service level should be improved with training and education for medical workers, public health workers, and community workers.

The central government is promoting the use of rehabilitation equipment and technology in medical facilities, and is encouraging the establishment of rehabilitation centers in rural areas.

The central government is promoting the use of alternative therapies, such as acupuncture, TCM, and other traditional therapies, in the treatment of disabilities, with a focus on the use of Chinese medicine.

The central government is also promoting the use of technology in the treatment of disabilities, such as the use of artificial intelligence in the diagnosis and treatment of disabilities.

The central government is promoting the use of technology in the prevention of disabilities, such as the use of genetic testing and screening.

The central government is promoting the use of technology in the education of people with disabilities, such as the use of apps and software for learning and communication.

The central government is promoting the use of technology in the employment of people with disabilities, such as the use of technology in the workplace and the use of assistive technology.

The central government is promoting the use of technology in the recreation of people with disabilities, such as the use of technology in sports and leisure activities.

The central government is promoting the use of technology in the social acceptance of people with disabilities, such as the use of technology in public transportation and public facilities.

The central government is promoting the use of technology in the prevention of disabilities, such as the use of technology in the management of prenatal care and the management of public health.

The central government is promoting the use of technology in the education of people with disabilities, such as the use of technology in the education of children with disabilities.

Seminar urges rethink on academic focus

Experts discuss reforms targeted at innovation for modernization

By LI XUE

Education and experts gathered in Beijing over the weekend to move the meeting of basic education in China some steps closer to achieving academic results, to improve the quality and supply enough skilled workers to feed China's modernization goals.

Li is director of the Beijing Municipal Education Commission.

“China is not in crisis,” he said, referring to the future of the world's second largest country.

“The problem is that we are still close to the critical period when China entered a new era, and was named after the national capital,” he said.

Li said the school had high hopes when it was established.

School authorities had always intended to make the institution a basic for basic education innovation, a cradle for innovative students and a platform for international exchanges.

We’ve made efforts to ensure our students can talk to each other and speak up, rather than being lied to by their teachers,” he said. Li said the digital plan on basic has been initiated, but the plan does not diminish the importance of...
Kim in Russia for talks with Putin

Kremlin calls visit 'full-fledged' one as West hypes up potential arms deal

By KEN GILL in Moscow respondents.

The visit to Russia by Kim Yong-un, top leader of the Democratic People's Republic of Korea, will be a "full-fledged" one, Kremlin spokesman Dmitry Peskov said, as they have a comprehensive discussion with President Vladimir Putin.

Kremlin, general secretary of the Worker's Party of Korea, and head of the State Affairs of the DPRK, left Pyongyang for his three-day trip to Russia on Thursday to narrow the Russian Federation, the official Kremlin-General News Agency reported on Tuesday.

"There will be negotiations between two delegations and, after that, there will be a conclusion of their communication in a one-on-one, solo format," Peskov said.

According to the spokesman, the visit is "in line with the best interests of both sides. We will continue to strengthen our own situation, and this visit serves this purpose."

Russian state news agency RIA reported Tuesday that the special train had arrived in Russia on July 28 from the north through Primorye Rail in Russia.

Bolevar said Putin and Kim would meet Putin's daughters,仪器, which runs through Wednesday and Thursday. Putin's daughters "didn't specify when or where.

The meeting, according to the Kremlin, was among 250 leaders of the northern north of Pyongyang, was also scheduled for the meeting with Kim in 2013, The Associated Press reported.

The United States has acquired the DF-41D, a new long-range ballistic missile as the latter is conducting its development work in Russia.

Both Moscow and Pyongyang denied such claims.

Apple’s new iPhone, as does Huawei

By MVZM LTD in Moscow respondents.

Apple’s new phone launched Tuesday came on the heels of one Huawei Technology, which analysts say could put pressure on iPhone sales in China and other regions.

Apple announced during its new phone launch event "…the iPhone 15" in Cupertino, California, that its new iPhone 15, iPhone 15 Plus, iPhone 14 Pro and iPhone 14 Pro Max will come to market on Sept. 19, about two weeks after Huawei Technolo-

The Guo, the report of the Defense Ministry correspondent, Joo Kyu-Byeon said on Tuesday that his ministry is closely monitoring whether PyongYang and Moscow will proceed with negotiations on arms deals and technology transfer.

The statement from the South Korean defense minister that the United States and Russia will be able to make a substantial contribution to the stability of the Korean Peninsula.

That was the least a 15mm optical zoom range and five times zoom for macro photos. It can also video directly to an external drive. The claim doesn’t detract from the other awesome features that include a 5x digital zoom, a front-facing 10MP camera, and a new Hyper-HDR mode.

just big enough for the iPhone 15 Pro Max to be able to pick up the point in the picture.

The camera has a 14mm to 70mm focal range with a 150mm equivalent focal length.

The Pro Max is the first phone with a 108MP sensor, which is exactly what you’re looking for in a smartphone. The sensor is really one of the best smartphone sensors on the market.

The Pro Max also has a 6.7-inch screen, which is perfect for taking videos and photos of the landscape. The display has a peak brightness of 1,500 nits, which means it can be seen in direct sunlight. The Pro Max also comes with a 120Hz ProMotion display, which means it can refresh up to 120 times per second, making it perfect for gaming and video playback.

Along with the Pro Max, Apple also released its new Apple Watch, the Watch Series 8. The new watch comes with the same processor as the Watch Series 7, which means it can run all the same apps. The Watch Series 8 also comes with a new health feature called the QRS filter, which can detect atrial fibrillation.

According to the report, the iPhone 15 will launch this week, while the iPhone 14 will come out later in the year.

That feature was previously available on older models and will now be included as part of the OS update. The iPhone 15 will be capable of turning the camera to the side and will also allow for better photo and video editing.

Chile marks 50th anniversary of president's ouster in coup

Local officials—mostly members of the political elite—have been among the main forces driving Chile's economic growth over the past 40 years, an economist told the United Nations and China's ambassador to the US.

Kao Min-an, an associate professor of economics at the London School of Economics and one of Chile's most influential economists, gave a presentation on Monday organized by the US Holocaust Memorial Museum, Global Ministries, and the China-US Exchange Foundation.

He said that in the past, local officials “were instrumental in helping the good producing entrepreneurs succeed together with the state agencies” and that “the more productive people are that it brings rents, jobs, GDP and all the benefits are preserved.”

But today, with a new focus, he said, “many local officials I’ve talked to have been highly ambitious about innovation and technology.”

He said “the city would force car owners, another two ox or three ox, and yet another ox on human energy.”

The list also includes ship design, semiconductor and manufacturing, he added.

Today, Chile is not going to come out and provide a global financial anchor alongside the US.

The two countries need to rebuild trust, and they should do so by compartmentalizing their differences and normalizing amounts of trade and investment.

“Let the universities be open, the scientists able to talk to each other, and that Chile is not going to come out and provide a global financial anchor alongside the US,” he said.

And he hopes that “we will have more of these.”

The article was featured for “Chile Daily.”

Calls for rights renewed 30 years after Oslo Accords

By JAN VUYEM, in Hong Kong

Global attention should continue on the consensus-based Oslo Peace Accords, the landmark Oslo Accords for Israel and the Palestinian Liberation Organization, or PLO, as the peace process was known.

And with the shifting world order, blocked multilateralism, Israeli control of Palestinian territories and the international community’s “moral bankruptcy” as attempts to forge peace continued, analysts said.

On Sept 13, Norwegian Prime Minister Jonas Gahr Støre opened an exhibition launching an alternative Palestinian Liberation Organization, right-wing planning approach to the occupied West Bank, as an Israeli-led, pro-independence faction excluding Palestinian presence there.

The Oslo Accords were signed on Sept 13, 1993, paving the way for peace negotiations between Israel and the Palestinians.

The pact was signed at the White House in Washington, where Israeli Prime Minister Yitzhak Rabin and Palestinian leader Yasser Arafat met to sign the historic accord.

The peace process stalled in 2000, after the September 11 attacks.

And the hardships of the Palestinian people and the International Community’s “moral bankruptcy” have been pointed out.

Palestinian refugees and asylum-seekers in the United Nations Relief and Works Agency’s (UNRWA) camps are facing an unprecedented humanitarian crisis on the southern port of Eilat on Monday.

The UNRWA has been providing humanitarian aid to civilians in Gaza since 1948, and has been providing education, health care, and social services to Palestinian refugees and their descendants.

The organization has faced funding shortfalls in recent years, which has impacted the delivery of services to the refugees.

In this article, the UNRWA highlights the challenges facing Palestinian refugees, and discusses the need for continued support.

The organization has been working to improve the lives of Palestinian refugees, but funding shortfalls continue to impact the delivery of services.

The UNRWA has called on the international community to increase its support for Palestinian refugees, and to help ensure that they have access to basic services and protection.

The organization has also called for greater international attention to the plight of Palestinian refugees, and for a renewed commitment to the principles of international law and human rights.

Wartski, Ltd., one of the world’s largest banks and post-solution providers for maritime and energy services, plans to produce more dual-fuel and methanol-powered engines and seek opportunities to add new products to its portfolio in the coming years, said top executives.

Facing challenges in China, the Finnish-based firm said many orders were 40% or more over budget, which is unacceptable in the owner’s need to announce and advance to larger vessels.

International Maritime Organization regulations aimed at reducing carbon emissions within the global shipping industry.

For instance, Wartski announced in mid-2022 that it would build 40 new methanol-fueled units. China’s state-run shipbuilding industry is the most important in the world and will keep 40% of the orders, Wartski told the Sydney Morning Herald, a state-run Chinese firm.

As China’s economy and the world economy continue to grow, the country will continue to build in the new shipping industry, which has offered strong support to global economic development, a Wartski spokesman said.

The background on a new era characterized by green innovation and technological advancement is gaining the interest of many organizations.

Briefly

Zhenghai HSR project of CR24 makes progress

World’s fastest high-speed railway, a project in Zhengzhou, Henan province, is scheduled to be completed and put into use in the fourth quarter of this year.

The construction of the railway, which will be one of the world’s fastest high-speed railways, was carried out in the capital of Henan province, China.

The Zhenghai HSR project is one of the most important projects in China’s national railway network, which will expand local rail transport system.

EV charging points up 40% in August

New energy vehicle charging points and new energy vehicle (NEV) vehicles in China increased year-on-year by more than 40% in August, said the China Electricity Council.

The council said the electric vehicle and new energy vehicle market has witnessed a high-speed development in recent years.

Chinese tourists seeking for unique experiences

The range of tourism products in China are being promoted as they aim to attract more tourists from abroad.

Tour operators in different Chinese cities are also looking at new opportunities.

With the government’s efforts to promote tourism and travel, more tourists are expected to visit China in the upcoming years.

Chinese tourists are now more willing to travel together with their families and friends rather than alone or in groups.

The surge in the number of Chinese tourists is due to the country’s growing economy, which has led to an increase in personal income and disposable income.

Experts forecast that China’s tourism industry will continue to grow in the coming years, driven by factors such as increasing disposable income, improved infrastructure, and greater awareness of the benefits of tourism.

Chinese consumers are increasingly looking for unique and enjoyable travel experiences, which have become more popular due to the growth of the tourism industry.

The Chinese government has implemented policies to promote tourism, including the establishment of national parks and the development of cultural tourism.

These initiatives are expected to attract more tourists to visit China and explore its diverse attractions.

Report: Power demand to rise faster in China

China's power supply security has been further enhanced during the past few years.\(^5\)

By ZHENG XIN
zhengxin@chinadaily.com.cn

The integration of new energy sources and the energy consumption pattern has undergone significant changes, with the total amount of electricity consumption reaching 82.6 trillion kWh at the end of 2022. More than 95% of the nation's power demand has been met by renewable energy.\(^5\)

The Institute issues a warning on the layout of various types of power sources in the next three years, including conventional hydroelectric, pumped storage, wind, solar, power generation, nuclear power, and a new type of nuclear power, to contribute to China's carbon neutrality goals by 2060 and the global goals of net-zero carbon emissions.\(^5\)

Additionally, the green and low-carbon transformation of the power sector has also been accelerated. In 2022, China's total installed capacity of non-fossil energy power generation was about 180 million kW, accounting for 63% of the total, while the addition of solar PV and wind power generation contributed to 94% of the total, substantially higher than power generation from traditional fossil fuels.\(^5\)

China's electricity consumption has grown by more than 6% annually in the past 10 years. In the next 10 years, it is estimated that the demand for electricity will grow by 3% annually, driven by rapid urbanization and industrialization.\(^5\)

China's energy mix has been transformed, with a greater emphasis on renewable energy and clean energy, asChina's power sector has surpassed international levels in energy efficiency and carbon footprint, with total energy consumption in 2021 of 1.14 billion tons of coal equivalent, a decrease of 9.8% year on year.\(^5\)

According to World Energy Outlook 2021, the world's top 20 energy consumers have contributed to 70% of China's total energy consumption over the past 10 years, expanding its operations to overseas projects, micro-grid construction, and the construction of green energy transmission lines.\(^5\)

XMEN: China's commitment to high-quality development and improved business environment has accelerated the confidence of foreign investors. China's foreign investment environment is considered "good" and the growth of fuel industry investments in China has been continuously improving over the years.\(^6\)

China's power supply security has been further enhanced during the past few years.\(^5\)
Forum lauds youth as future of NE Asia

By MAI XUING in Beijing and
LUH CENXING in Changchun

Young entrepreneurs in Northeast Asia are being encouraged to engage in cross-border trade and cooperation, industry experts said.

Liu Xubo, born and raised in Changchun, former mayor of Harbin and Chi-

na’s Daoyu was believed to be hon-

ored to attend the Summit on Young Entrepreneur Development and Cooperation Forum in Changchun, Jilin province, on Aug. 15.

The joint efforts of State-owned and private enterprises have led to steady economic development and improvement in infrastructure construction, said

A representative of Power Construc-

tion Company of China — or PowerChina — the enterprise specialists in tradi-

tional and modern construction, has joined in construction of power plants, power grids and roads in a global scale, according to the China National Road Fre-

eways.

At the forum, his department sought international opportunities, as the young entre-

preneurs and influential leaders from international organizations found var-

diable chances to explore potential provisions for their enterprises.

Nick Williams said, by looking closely at the development of the theme of the forum.

The theme of the forum is to be held during the 13th China-Northeast Asia Entrepreneur Development and Cooperation Forum, which is a theme of “Innovation and Development,” and “A Stroke of Luck: Opportunity Comes When Prepared Mind Seeks.”

The gathering brought over 300 young entrepreneurs from China, Japan, South Korea, Mongolia, Russia and the United States.

Industry experts and leaders opined the region to strengthen their econ-

omic and trade cooperation ties, emphasizing the importance of infra-

structure in driving regional development.

Young entrepreneurs from multi-

ple countries were encouraged to upload videos and innovation and pro-

pose solutions to regional issues with an innovative, vivid and creative spirit.

Young entrepreneurs across Northeast Asia, during startup and growing up, have the unique opportunity to drive in new industries.

In Changchun, Luojing Smart City, a joint venture in the region, is engaged in the fields of artificial intelligence, education and health.

Young entrepreneurs are forming a con-

scious of innovation and changing the local market.

The two entities signed an impor-

tant business agreement in 2019, aiming to promote cooperation and ex-

change of business strategies and a simple system.

In Changchun, a South Korean management of packaged food product, is expected to produce hundreds of millions of dollars in annual sales.

Kim Young-soon, CEO of Pooh-

hann International in the company of the Northeast Asia Young Entrepreneur Development and Cooperation Forum in Changchun, said.

South Korea’s leading heat and has been working closely with the team of China.

With an eye on expanding its foot-

print in China, the food-focused com-

pany has forged a multifaceted alliance.

It is working on entering the Chi-

nese market through collaboration with Wings Fuyu Food Holdings, a Chi-

nese meat producer.

War game more senseless and irresponsible scaremongering by House select committee

The United States House Select Committee on Strategic Competition between the United States and China staged a war game in New York on Monday, simulating an "invasion" of Taiwan. The US House's armament committee announced that it would stop the war game, triggering imminent outbursts of the US and Taiwan to the world. Beijing has repeatedly warned the US not to engage in such provocations.

The game was launched as a result of the recent visit of US Secretary of Defense Lloyd Austin to Taiwan. The US House of Representatives' armament committee announced that it would continue to stop the war game following the announcement of its findings. What They Say

Rogue state not guilty of barbaric larceny

To determine if parties have a clear understanding of the goals and constraints, the CEPI Institute has created a new tool to measure the interests of the US and China.

It is understandable of the United States, which always pursues its own security over others, to seek to encroach on vehicle technology, industry and supply chains to include the United States in multilateral trade, which is crucial for the multilateral trade system.

It is Russia that refuses to accept and face fair competition with China. Washington is trying to deprive other countries of their right to develop independently and make independent decisions. China, however, will continue to provide support to other countries in need.

In the first official statement on the incident issued on Friday, the US Justice Department confirmed that the United States aimed to "confront" China on issues such as the use ofseudonym to sidestep US sanctions.

The US Justice Department said that the US-China trade war was based on the "America first" principle, which it referred to as "a strategic mistake." C

China. EU can make G20 more inclusive

The recently concluded G20 Summit in Johannesburg, South Africa, has yielded fruitful results, notably agreed on many global issues, including promoting education, strengthening cooperation, and developing emerging economies and developing countries, striving to bring about outcomes and perspectives of innovative approaches. BRICS is dedicated to increasing the influence of emerging economies and developing countries in the decision-making process of international organizations. The BRICS nine have the potential to boost the life of the people in the world.

China and the EU have more common interests than differences. And since they share the same inclusive development, the Global South Initiative and the Global Civil Society Initiative have achieved "the goal of One Earth, One Future, One Family" best explain what needs to be done.

But since the EU's setbacks, the major obstacle is the development of the EU's educational and technical innovation, and to achieve this goal, the European Union should strengthen cooperation.

The approach will strengthen the cooperative foundation of multilateralism and internationalism, fostering development and shared prosperity for all.

The popularity of BRICS reduces the existing environs of countries and their people. Countries of the Global South have a stronger voice in global governance, because it is dominated by Western powers and their allies. They have benefited from the Global South's hegemony and the EU's "saloon" tendency to offer their own solutions, policies, and guidelines in the face of global economic, social, and environmental challenges.

There is a growing dissatisfaction and promotion of Western values on developing countries, and the "EU-China" is the key to influence of Western economies and practices. The EU has more global potential, but power competition, trigger a new Cold War, advocate "decoupling", "new economic order", and "financial reconquest" to regain their power and influence.

Countries of the Global South are determined to enlarge their own path of development, safeguard their developmental rights, and pursue "inclusive development" that improves their mini-condition. They aim to ensure that the "globalization" framework, which many affected parties are already "inhabited", to be revised or amended. The BRICS nine have agreed on the establishment of the BRICS new development bank and, and the reduction of power concentration's international influence, fostering development and shared prosperity for all.

Some have liked the Johannesburg summit to the "19th Central Committee, which established the foundation framework for the post-war international legal system. At the same time, the Johannesburg summit echoes the sentiments of support towards the "new global order", and the established framework has the potential to guide the world to a more promising and better future.

Others have liked the Johannesburg summit to the "19th Central Committee" and "BRICS" and "New Development Bank (NDB)", and the "BRICS" and "NDB" have agreed to establish a "BRICS new development bank and, and the reduction of power concentration's international influence, fostering development and shared prosperity for all.

GLOBAL VIEWS

Regenerative agriculture for a nature-positive planet

With swift system-wide planning and collaboration across governments, we have plenty of lands and waters on which to build renewable energy sources and secure food security if we focus our efforts on systematic planning.

YAO QIUI

Revvving up with a little help

Africa’s increasing capabilities for autonomous development will enhance its international influence and drive the reform of the global governance system.

African countries firmly support multilateralism, strongly identify with the concept of a community of shared future between China and Africa, and are a leading demonstration area for the Belt and Road Initiative.
Pickleball takes China by storm

Pickleball, a laid-back sport that has been around since the 1960s, is making waves in China. Young people are growing especially fond of the game.

By TAN YANXIANG in Chengdu tanyanyang@sohu.com

P

eng Lan, a sports aficionado, spent almost the whole afternoon playing pickleball with her friends at the new indoor pickleball club in Chengdu.

"It's a very new game in the city and it is fun and easy to play," she said at Chengdu Simple Touch Pickleball, which boasts air-conditioned indoor courts built for international competition standards.

In late August, the club hosted the first DTUS tournament in the city. DUSP, which stands for Dynamic Universal Pickleball, and was developed in 2021 by Sam Edlin, founder of Major League Pickleball (MLP), about 30 local players participated in the tournament.

The sport of pickleball, invented in 1965 in the United States, is a game in which two or four players use paddles to hit a wiffle ball over a net. It looks like tennis, but is played on a half-sized tennis court with a smaller, ball and paddles.

The rules of the game are simple: players serve against each other and play them over a net. The winner of each point goes on to serve next.

According to statistics, there are currently 8.5 million pickleball players in the US. Nearby, six third of the players are aged between 50 and 69, making up the largest percentage of pickleball players nationwide, according to the Association of Pickleball Professionals.

In China, from April to September, about 100 social media platforms, like Xiaohongshu, launched campaigns called Pickelball Together to promote the sport and recruit members for its own pickleball leagues.

Pickleball is gaining a foothold in China, and this trend is expected to continue.

In addition to promotion by famous social influencers, sports channels, newspapers, and TV reality shows have also shown interest in promoting pickleball with local clubs.

Peng and her friends at a local club, however, are not the first to pick up the sport in Chengdu. Most of their clients are young professionals and people who are looking for a new and innovative sport to engage in.

Last September, Peng and friends Wu Xiaohong happened to learn about pickleball and tried it out with some friends.

"It is a relatively new game for both genders, as it requires more skill than physical power," he said.

"I thought it was fun and decided to play pickleball, which is relatively safe," he added.

Zhong, a fan of the sport, said he was introduced to pickleball by his wife who is also a player and a member of a local pickleball team.

Zhong's club has two outdoor courts and has attracted nearly 3,000 people during its pop-up events, which have been held with various partners since May.

Now he is working with the Chengdu Sports Bureau to promote the sport to more people, especially schoolchildren.

"We are short of schools, especially small schools, to promote pickleball," Zhong said.

This sport has a growing fan base in China,

"I believe this sport will have a great potential in China, as it is a relatively new and easy sport to learn," she said.

But for some, the sport is still a new concept.

"I don't think China has a lot of people who have tried it," she said.

"But I do think it has a great potential in China, and we are introducing it to more people," she added.

Pickleball has been gaining popularity in China since 2015, and the sport has been introduced to more schools and communities across the country.

"It is a sport that is easy to learn and enjoy," she said.

"I believe it has a great potential in China, and we are introducing it to more people," she added.

"I think it has a great potential in China, and we are introducing it to more people," she added.

"I believe it has a great potential in China, and we are introducing it to more people," she added.
Travel left up to chance

Most people plan their vacations well in advance — including where they’re going. But others like the thrill of the random destinations they end up at when they buy blind box plane tickets, Li Ximao reports.

Travel is like a box of chocolates — you never know what you’re going to get, especially when you’re using a blind box plane ticket.

The specifics of each company’s blind box may be different, but the main idea is the same. After you buy a blind box at a low price — usually 100 or 200 yuan — and select your departure airport, you will receive several destination options to choose from. Then you have a year to take your flight.

But these options are usually less popular destinations, like the one Mr. Zhang got in the very first blind box plane ticket he bought in March. The 29-year-old went to Zhangzhe in Northeast China’s Jilin province, China’s capital of the past. That trip was only about 500 yuan — a great deal for a short flight. This young woman, who enjoys traveling wherever she can, considered the choice "a hit or a miss."

Less-known destinations do actually bring surprises, he said. When he arrived in Dazhou, he found that she was able to share a rental car with a few other people. This allowed them to save money, since many of the area’s scenic spots are charge for each other.

Fan found a group of surprising young women in Li. They went to some scenic spots together, but everyone was free to choose their schedule. "The best part of this trip was the travel fluid and romantic," Fan said.

This discovery means much for him. Before that, he thought that most of the natural scenery she saw in photo was superficially enhanced. However, the trip to Li has changed her thought.

After a couple of days, in Zhangzhe, the group decided to head to Dazhou, a city in Sichuan province. Even though it cost a bit of traveling, on the way she thought about the purpose and just went along. "I never expected myself to be wowed by nature," she admitted. "But Dazhou really changed my mind."

Fan and his travel pals went on a sudden trip, and as they entered the hinterland of the downtown, she was overjoyed by her current airport couldn’t describe. To be honest, I’m not a nature lover, but when you’re surrounded by the towering nature, the impact is inexplicable," she said. "It really made me understand the passion."

The beautiful sight made her decide to join in the trip. After some discussion, they finally decided to visit the original trio to see if he could join the trip.

When they first arrived, a friend told Li that Dazhou was an excellent Internet sensation, but she still decided to choose this trip herself.

"My biggest discovery is that Dazhou is a city full of sunshine," I was amazed. "You can see the scenery and old houses in numerous alleys in the same frame. Later, I saw some elderly gentlemen getting coffee outside a Starbucks."

Dazhou is a city that mixes tradition and modernity and that was more to the city than the "mass" also advertised on social media.

Li Fan, who takes part-time jobs between exams, or Li, who was a student with long vacations, Zhangzhe plane traveling. It is so worth it from Monday to Friday. Blind box plane tickets are not only for public holidays, but she can only make use of them on weekends.

In April, Zhangzhe bought a blind box from China United Airlines for 75 yuan plus a few extra. She would be given six rounds of options over the course of a month. But during the first few rounds, none of the destinations caught her attention. So in the last round, she thought she would just randomly pick one instead of getting a verbal. Eventually she picked Qiqihar in Northeast China’s Heilongjiang province.

Qiqihar is a city that never crossed my mind when I think of traveling, but I have had hopes for my life there," Zhangzhe exclaimed. "I wanted to study at a college but I visited the electrical power factory." This summer, Zibo barbecue was making headlines in China's inland provinces for months. "Although I didn’t go to Zibo, I had Zibo barbecue in my mind," Feng said. "I think it’s similar to Qiqihar’s barbecue," she said.

The historical element and reasonable price of Qiqihar barbecue were also a plus. Zhangzhe thought that the food and culture of the city’s barbecue. Shushan her husband she had a barbecue for her wedding to her her husband she said. "We did it like we are at a hotel. It was so generous" she said.

Making friends along the way

Although all three of them got G2, they have different takes on what traveling means to them and how they treat their trips.

Fan believes that life itself is a journey that consists of long-term and short-term trips, and that everyone is a brief companion. During his trip, one of his travel pals found that other car-share drivers would give out “gritty” sounds a kind of handbell flicker. Their driver, however, told them to find someone else if they wanted to travel with them. The woman was disappointed, and didn’t take it to heart and went on their trip.

This year, another traveling, as they were navigating the side of the road, the rider without glasses was so excited that he didn’t think that he couldn’t help himself. "It was fantastic," he confided.

As a result, Fan enjoyed the travel companions and the driver during the trip, she even invited him from other people.

For Li, however, it was different. "It’s about strengthening friendships and making new ones," said. "I have made friends all over the globe. Well, that may be an exaggeration, but that’s what you get.

Two last summer, Li took a lot with him. "We never have disagreements probably because we’re so different," he said. They were even a perfect match in terms of interactions during the trip. For instance, when selecting a place to dine in Li, they decided on dining out.

Li also makes new friends during his trips. If he meets someone, they talk to him, they’ll stay in touch on social media. "I will continue them whenever I have something I’d like to discuss, even long after my trips," he said.

New attitude toward travel

According to associate professor Zhang Hanzi, Tourism from Beijing Normal University, China’s personal travel and plane place great value on the experiences they have while traveling. Their standards for a fulfilling experience also vary from individual to individual.

Fan, for example, if she doesn’t have the opportunity to witness breathtaking scenery, she considers her trip worthwhile as long as she savors conventional meals.

Growing up in an environment distinct from that of previous generations is also what Gen Z wants when it comes to travel. "Travel comes first of all and then the other things," Gen Z said, referring to the three things. "It’s about the three things and the other things are secondary," he said.

Another reason why these blind box tickets are popular for Gen Z’s that many of them have modest budgets. As these presents are not usable during public holidays, they can be used for students, freshmen, or individuals like Han, who can benefit greatly from them.

Traveling during the off-season unexpectedly raises the experience for many. Fan and Zhangzhe have strongly recommended she bought to her friends who have the flexibility to travel during less crowded times.

According to Professor Zhang, research shows that about 22 percent of off-season travelers belong to the Gen Z demographic. Li expressed his hope that airlines and travel websites will continue to offer blind box options while enhancing related policies and customer service. "It appears that, once the peak travel season subsides, they often overlook this customer segment," he observed.

Professor Zhang also highlighted the exceptional nature of this group as the general public’s enthusiasm for travel rebounded following the pandemic. Many people have come to see the importance of their mental well-being, meaning that an integral component of their lives. Given the unique circumstances of this year, she added that many of their friends flocked to the mountains or beaches. "If you’re feeling a little bit down, there’s really no supply," he warned. "Off-season travel means popular; the condition is the opposite. They can’t be properly used benefit them those discomforting economies."

Innovative farming techniques could save Nigeria

From July 19 to 26, I traveled on an expedition to the Shiyanghe Basin in Xinjiang, located in the heart of a desert in Northwest China’s Gansu Province. Pockmarked by the dryness of the deserts on the outskirts of the city, the basin’s desolate and abandoned land was once a city of civilization, but it was swallowed by progress and left behind.

During the trip, we explored government programs to help rural revitalization, university experimental stations, the dedication of extension agents, and the power of farmers’ co-operatives to revitalize these regions. For example, university experiments are key to the future of agriculture. They are vital hubs of knowledge and innovation where researchers, experts, and farmers collaborate to develop practical solutions for each cultural development. A survey I conducted reveals the high adoption rate of new agricultural technologies by farmers in the Shiyanghe Basin. They are highly satisfied with using-saving technology, which has led to over 40 percent water savings. However, to maintain the success of these systems, the government has to work closely with farmers and related organizations to ensure continued funding and support.

To visit the farmers in the Shiyanghe Basin, we decided to go with a greenhouse. We had the foresight to bring along a greenhouse and create a sustainable farming system. This helped us to maintain a steady supply of fresh produce throughout the trip.

We also visited a greenhouse with vertical farming. The greenhouse was designed to maximize the use of space and resources, allowing for a higher yield in a smaller area. This is an important factor in sustainable agriculture, as it helps to reduce the carbon footprint of food production. We also had the opportunity to see the benefits of vertical farming firsthand, as we witnessed the growth of fresh vegetables and herbs.

This trip has taught us the importance of innovative farming techniques, and we believe that these methods can help save Nigeria and other countries with similar agricultural challenges. We hope to continue our work in these regions and support the farmers in their efforts to create a sustainable, thriving agricultural sector.
