**PRESS CONFERENCE
NCRI-US to Reveal Intensification of Iran's Nuclear Weapons
Program**

WASHINGTON, DC, December 17, 2024 – The National Council of Resistance of Iran-U.S. Representative Office (NCRI-US) will hold a press conference to disclose new findings about the Iranian regime's nuclear weaponization program.

The revelations, sourced from within the regime, will include:

- Identities of some key experts working on the weaponization efforts.
- Location of their recent activities.
- New cover Tehran is using to conceal its recent weaponization activities.

The NCRI has a track record of exposing major Iranian nuclear sites, including the Natanz uranium enrichment and Arak heavy water facilities in 2002, which triggered, for the first time, the International Atomic Energy Agency (IAEA) inspections.

In 2011, the NCRI uncovered the regime's secret organization, SPND, responsible for nuclear weaponization, later corroborated by the IAEA and designated by the U.S. Government.
