HUAWEI HAS **85,000+** PATENTS
IN CHINA AND **50,000+** OUTSIDE
OF THE COUNTRY.

40,000+ OF THOSE WERE
GRANTED IN THE U.S. AND THE EU.

Today the President signed a law to rip and replace essential Huawei equipment in some of America's most underserved areas. Read the full statement here. #FactsMatter

Huawei Media Statement

The so-called Rip & Replace law, signed by the President today, is simply an unrealistic attempt to fix what isn't broken. This legislation remains considerably underfunded, will take longer than anticipated to fulfill, and will put at risk some of Huawei's customers who operate in the most underserved areas.

This law does not address the most significant issues of network security but rather completely ignores the alternative proposals put forth by rural network operators, based on proven processes developed by experts in cooperation with government oversight. It also reduces the ability of these broadband providers to deliver connectivity, which will hurt local consumers and businesses and could put these operators out of business.

A more holistic approach to securing network equipment and supply chains can benefit all U.S. networks at a fraction of the cost outlined in the legislation. While the intention was to provide a robust and secure network for all Americans, this law will deny consumers the competitive edge that comes with broadband connectivity, disrupt business, education and emergency response in those areas and cost tax-payer's money - while ultimately failing to achieve the core objective for which it was written.
