Huawei Twitter and Facebook May 13 – 18

Paul Scanlan, CTO of Huawei's Carrier Business Group, discusses the ways connectivity is helping combat #COVID19. Huawei’s growth in the past year and plans for continued innovation in 5G. Watch the full video here: tinyurl.com/yy29pomy

Art has the power to unite and connect in times of crisis. Especially music, which always brings people together, just like songs are helping neighbors in Italy. Let’s light up our hope with live music!

The live streaming concert gathers music and technology’s power to present a show dedicated to art, sharing and charity, proving how important the role of technology in nowadays.
Just this year, Huawei took 72 hours and completely reconstructed Huoshenshan Hospital, specifically designed to treat COVID-19 patients. Huawei’s technical team was one part of the effort; the “bridge builders” supporting the heroes. #HospitalsFirst Huawei.com/Today

Through digital technology, we’re better equipped than ever to fight a pandemic, thanks to digital technology.

Join us at #HAS2020. Huawei Rotating Chairman Guo Ping, Executive Director of the Board & Investment Reviews Board Chairman Wang Tao & CBG President of Global Partnerships & Eco-Development Wang Yamin will discuss building a connected, intelligent world. #Huawei #HAS2020

How can the ICT industry benefit from AntiRaroration? Find out from Huawei Rotating Chairman @GuoPing during his keynote speech at #HAS2020 on May 18 at 4pm (GMT+8). Stay tuned to the livestream: t.ly/MBtBpk

Webinar: Saving the Rainforests with AI (TECH4ALL)
Why do you think Huawei's optimism is so important in today's world, especially for someone who is looking to contribute and work in the area of conservation technology? How do you suggest one can begin?

We’re going live after today’s webinar! Share any questions not answered during the panel and @TelviewWhite, CEO of @RainforestCI will be here answering your questions right here – send your q’s by tagging @HuaweiUSA at 3pm ET!

If you have questions, we have answers. Follow @HuaweiUSA on Twitter to participate in a live Q&A

Did you ever consider an open source platform?

You really can’t even estimate it. A lot of illegal logging is done out of a sense of necessity, for food and money, and it’s likely to increase in the COMID world where more people have lost jobs.” - Mitch Aide, Professor of Biology at the University of Puerto Rico-Rio Piedras.

How many (estimate) illegal loggers are there?
We are actively expanding our team, with openings today for engineers, interns, and volunteers. If you'd like to join us, please apply at contact@rfcx.org. And we're hardly the only group who'd welcome your involvement. Don't be shy!

People will be using bush meat to eat because they can't afford food - a lot of places have no welfare and there are no other options. For most of the world, COVID is probably hurting the environment more, though.

Mitch Alse, Professor of Biology, @usnp.

We're seeing changes in air quality, but when we go back to normal, air quality will go right back to the way it was. The majority of fauna around the world is probably more threatened than ever. So many people around the world have lost their jobs. There's no safety net...

A large amount of our hardware is open source. You can actually find it on github.com/rfx.

Post-webinar Q5: People mention the benefits the current stay-at-home orders have had on the environment. A lot of people are worried that environmentalists want this to be the normal way of life moving forward - what are your thoughts?

We have not yet had any projects or partnerships in Honduras, but we would truly like to explore this. Please connect us with anybody that you think we might be able to team up with on the ground there for work in conservation. Thanks!

Great question! To ensure that our alerts can be sent as quickly as possible, we process all incoming audio the moment we receive it. Let us know if you'd like to learn more about this whole tech workflow.

Post-webinar Q7: Does @RainforestCx have contact or partnerships with anyone in Honduras?

Post-webinar Q6: Is all the phone data checked separately or are they combined before analysis?
Hundreds of Huawei tablets are now available for free in hospitals and care homes to help residents and patients stay in contact with their families and loved ones during the COVID-19 crisis.

How can 5G and AI transform the medical industry? Learn how AI plays a role in precision sequencing and learn more. tling.com/sightfitx

Guo Ping, Huawei Rotating Chairman, detailed how the company has survived & thrived in the past year during his keynote speech entitled "A Year and Beyond" on Day 1 of HAB2020. Here are the highlights. Learn more: ting.com/yjgr4h (Post 1 of 3)
The past year was difficult, but we forged ahead, not just to survive, but to thrive. And business is doing just fine. We want to thank our customers, partners, and everyone who supports us. We won't forget what matters most — working together to connect mankind.

Two days ago the US Department of Commerce made changes to its Foreign Direct Product Rule against Huawei. Our business will unavoidably be affected. Our experience over the past year has made us confident that we will quickly find a solution.

We can implement policies, processes, and technologies so that we can prove that neither our products nor our employees are subject to the undue influence of the Chinese government,” says Huawei’s Andy Purdy.

At 10 a.m. ET on May 20, @GMMi's Jon France, Chris Mitchell of Royal Holloway, Bob Xie and Huawei's @andy_purdy will be explaining how cybersecurity testing is done in Europe. Register for the webinar now: tinyurl.com/yyabz9f

The past year was difficult, but we forged ahead, not just to survive... but to thrive. And business is doing just fine. We want to thank our customers, partners, and everyone who supports us. We won't forget what matters most — working together to connect mankind.

#HAS2020
Huawei categorically opposes the amendments made by the US Department of Commerce to its foreign direct product rule that target Huawei specifically.

The US government added Huawei to the Entity List on May 15, 2019 without justification. Since that time, and despite the fact that a number of key industrial and technological elements were made unavailable to us, we have remained committed to complying with all US government rules and regulations. At the same time, we have fulfilled our contractual obligations to customers and suppliers, and have survived and forged ahead against all odds.

Nevertheless, in its relentless pursuit to tighten its stronghold on our company, the US government has decided to proceed and completely ignore the concerns of many companies and industry associations.

This decision was arbitrary and pernicious, and threatens to undermine the entire industry worldwide. This new rule will impact the expansion, maintenance, and continuous operations of networks worth hundreds of billions of dollars that we have rolled out in more than 170 countries.

It will also impact communications services for the more than 3 billion people who use Huawei products and services worldwide. To attack a leading company from another country, the US government has intentionally turned its back on the interests of Huawei’s customers and consumers. This goes against the US government’s claim that it is motivated by network security.

This decision by the US government does not just affect Huawei. It will have a serious impact on a wide number of global industries. In the long run, this will damage the trust and collaboration within the global semiconductor industry which many industries depend on, increasing conflict and loss within these industries.

The US is leveraging its own technological strength to crush companies outside its own borders. This will only serve to undermine the trust international companies place in US technology and supply chains. Ultimately, this will harm US interests.

Huawei is undertaking a comprehensive examination of this new rule. We expect that our business will inevitably be affected. We will try all we can to seek a solution. We hope that our customers and suppliers will continue to stand with us and minimize the impact of this discriminatory rule.
