

Subject: How Qatar Foundation is using vertical farming to support local food security

Hi XX,

As Qatar seeks to explore new technologies and innovations to combat local agricultural challenges, I wanted to gauge your interest in a background interview with horticulturalist Mohamed Hassouna of the Qur'anic Botanic Garden, a member of Qatar Foundation (QF), to speak about the potential of vertical farming in Qatar.

Given the country's desert climate and harsh environmental conditions, QF's Qur'anic Botanic Garden has partnered with the University of Arizona to develop a localized farming model. The concept will utilize old shipping containers, equipped with advanced lighting systems to meet the needs of the crops.

If you would be interested in speaking with Mohamed about vertical farming and its potential impact in further detail, I would be happy to arrange a conversation.

Best,  
XX
