EXPANSION is a common word in today's US solar wafer, cell and module production lines. The reason behind it is the Inflation Reduction Act (IRA) that increases the cost-competitiveness of made in USA solar panels. As pioneers of cutting-edge technologies, European solar PV Equipment manufacturers provide solutions over the entire value chain with GW scale experience. Providing A to Z factory planning and high-quality equipment.

We at VDMA Photovoltaic Equipment invite companies, planning to invest in solar manufacturing equipment/lines in the US, to attend our informative networking event "EU Equipment Solutions for US Solar Manufacturing" in our Washington D.C. Office on the 31st of January. We will present the complete PV production know how and technology present in Europe with the presence of European PV equipment companies and institutes. From the US, we will be having talks from [Christian Staudt \(McKinsey & Company\)](#), [Dr. Markus Beck \(U.S. Department of Energy \(DOE\)\)](#), [Michael Parr \(Ultra Low-Carbon Solar Alliance\)](#), [Terry Jester \(US solar manufacturing expert\)](#). In addition to the talks, we will have a networking session, where VDMA member companies show European equipment solutions and a panel discussion about the EU US trade policies.

Places are limited and will be reserved for US-based manufacturing investors. For more information contact [Dr. Puzant Baliozian, VDMA](#).
