The general details are reflected in the FTI Consulting Information Security Policy. The recovery point objective exceeds 4 hours and the recovery time objective exceeds 24 hours. The specific tools used for backups vary by region.

- Processes for regularly testing, assessing and evaluating the effectiveness of technical and organisational measures in order to ensure the security of the processing

FTI has access to all major vendor security bulletins and have controls over identifying, scheduling, testing, and deploying patches. The deployment time is 14 days for high and within 24 hours for critical/emergency patches.
FTI has controls over identification of vulnerabilities, risk ranking, reporting, and remediation. This includes perimeter vulnerability scans that must be performed at least quarterly and semi-annual internal vulnerability scans that cover workstations, servers, and network devices.

FTI performs internal penetration test to identify flaws in the internal security controls that could allow an attacker to surreptitiously gain access to sensitive data and/or disrupt critical business systems. The organization must also perform external network penetration test to identify potential vulnerabilities which could be exploited to gain access to systems and data or to establish a foothold into internal network from which to launch further attacks.

FTI's cybersecurity team tracks the resolution of vulnerabilities. Vulnerabilities that are not resolved as part of patching cycles must be tracked on a vulnerability log or similar mechanism.

- Measures for user identification and authorization

FTI uses unique IDs and if generic IDs should be disabled unless there is an approved security exception. FTI users authenticate through Active Directory (AD), SSO used when possible, and remote connection requires two factor authentication and leverages FTI's Corporate DUO two factor technology. Duo Security generates passcodes (similar to a PIN Code) to mobile devices for login and can receive push notifications for easy updates. Duo Security is integrated with OneLogin (our SSO platform) providing a unified authentication solution.

Privileged and remote access must include multi-factor authentication and secure mechanisms (e.g., TACACs+, RADIUS) must be used on all network devices.

FTI password complexity (i.e. characters, length), lockout settings, expiration settings meets the following requirements:

- Contains both upper and lower case characters (e.g., a-z, A-Z)
- Have digits and punctuation characters as well as letters e.g., 0-9,!@#$%^&*()_+-|\;,:<=?/>)
- Contains at least 12 characters for standards accounts and 15 characters in length for admin accounts
- Must be changed at least every 90 days
- Are not words in any language, slang, dialect, jargon, etc.
- Are not based on Confidential Information, names of family, etc.
- User accounts are locked after 10 unsuccessful logins. Account lockout for 30 mins. Reset after 30 mins.
- Password history - 24 passwords remembered

Passwords are stored protected in an encrypted format.

- Measures for the protection of data during transmission and measures for the protection of data during storage

FTI has Data Loss Prevention (DLP) and extrusion prevention tools that restrict sending sensitive data over unsecure mail. Anomalies that exceed the normal traffic patterns are noted and appropriate action is taken to address them.

FTI protects data in transmission which include the following acceptable methods:

- Email: Transport Layer Security ("TLS") Internet protocol, which provides security for all email transmissions over the public Internet may be setup with using opportunistic or mandatory TLS connections. Only TLS 1.2 or TLS 1.3 is acceptable.

- "Mailbox to mailbox" encryption that secures email messages and electronic files (using 256-bit AES encryption).

- Secure FTP: FTP utilizes TLS or SSH to allow us to share data with clients securely over the Internet. Only TLS 1.2 or TLS 1.3 is acceptable.

- External Encrypted Drive: Must use FIPS 140-2/AES 256-bit encryption or stronger.

- File Stores: Matter/Engagement related files stored centrally on the network are secured so that only those explicitly authorized can access the files.

FTI stores data in an environment that is not internet facing and segregated from the demilitarized zone by a firewall. The data must be logically segregated from other client or corporate data. Different tools may be employed depending upon the nature and/or location of the work.
• Measures for ensuring physical security of locations at which personal data are processed

Specific physical security provisions vary depending on office location, however, as per the Information Security policy, access to company premises, including delivery and loading areas, must require badge access. Badge access is managed by local facilities or ITG, who use a badge kiosk to produce access badges. All badge issuances and updates require management approval.

• Measures for ensuring events logging

FTI logs activity which is stored for 7 years. Data is logged at sufficient level (i.e. user ID, activity) and logging is enabled for the entire environment. The logging must provide relevant information (i.e. authorized & unauthorized attempts, remote access). System event and audit logs should capture the following events as applicable:
  • Authentication failures
  • Software or service failures
  • Logon and use of privileged IDs
  • Database changes
  • Adding/deleting users
  • Password Changes
  • Adding/deleting groups and/or users associated with groups
  • Changing audit log configuration or disabling audit subsystem

FTI uses SecureWorks which provides a Security Incident and Event Management (SIEM). The foundation of the SIEM includes Red Cloak endpoint event logs analysis, which includes an industry-leading assessment of current and zero-day threats and vulnerabilities.

• Measures for ensuring system configuration, including default configuration

Measures for internal IT and IT security governance and management

FTI has processes in place to confirm compliance with configuration standards. This includes a process for newly created device (i.e., checklist), at least annual reviews and hardening, removal of unnecessary / insecure services, and alarms set for key events (i.e. change in security group, configuration).

• Measures for certification/assurance of processes and products
FTI holds the Certified Enterprise designation from Verizon Cybertrust and participates in their Security Management Program (SMP). The SMP is a comprehensive security risk reduction and certification program that addresses all aspects of proactive information security, from network and system analysis to physical and policy inspection. The cornerstone of SMP is the International Standards Organization (ISO) standard 27002.

As part of the Cybertrust Third Party assessment schedule, FTI Consulting's Global Cybersecurity and Privacy function undergoes the following reviews by the Verizon Security Certification organization:

- Policy Review — evaluates the documentation and inspects the contents of key security policies — Annually.
- Process and Procedure Validation — Annually.
- Physical Inspection — evaluates the implementation of security controls in the physical environment surrounding critical network infrastructure, including doors, HVAC, entry logs, power redundancy, etc. — Annually.
- External Risk Assessments (Network and System-level scans) — Quarterly identifies possible risk areas in an organization's external network infrastructure and assesses its consistency with key controls.
- Penetration testing (External and Internal - Network and System-level) is conducted by a separate third-party — Annually.

Individual business units may hold additional certifications or use tools that are supported by additional certifications.

- Measures for ensuring data minimisation

FTI only acquires data for the intended purpose by working with the client or business partner to ensure only the minimum amount of necessary data is obtained.

- Measures for ensuring data quality

FTI Consulting is dedicated to providing its clients with high quality services that meet our standards of excellence and integrity. The quality of the work for each of our clients is monitored by the Senior Managing Directors responsible for each engagement along with the highly qualified colleagues in their practice teams and business segments. On a broader level,
FTI sets the tone for our global organization in our Code of Conduct (https://www.fticonsulting.com/-/media/Files/us-files/our-firm/guidelines/fti-code-of-conduct.pdf) which discusses our commitment to quality throughout, and in particular in our Statement of Values.

FTI takes into account the principle of purpose limitation, while making sure that the data is adequate, relevant and not excessive for the legitimate purpose. FTI enables data subjects to exercise their rights, including the rights of access and, as appropriate, the rectification, erasure or blocking of Personal data and keep data accurate, and not retain it any longer than necessary.

- Measures for ensuring limited data retention

FTI has a records retention policy that ensures records are retained for required and necessary periods of time; providing that records which are no longer useful are properly destroyed; and providing that records to be retained are stored methodically and economically. FTI uses their reasonable and best efforts to prevent the premature destruction of Records. The organization must have processes to return data upon end of contract and destroy data using appropriate mechanisms upon Department of Defense (DoD) and National Institute of Standards and Technology (NIST) standards for all data bearing devices.

- Measures for ensuring accountability

FTI has a defined process to resolve complaints about privacy and its collection or use of personal information in compliance with the EU-US Privacy Shield Principles. FTI has measures in place to ensure complaints are resolved within 1 month. Unless otherwise dictated by local law, the exact number of days to comply with a request varies, depending on the month in which the request was made and is calculated based on the day the request is received plus one (regardless of whether the day is a working day or not) until the corresponding calendar date in the next month.

- Measures for allowing data portability and ensuring erasure

FTI receives requested Personal Data directly or provide access to a tool which allows the requestor to extract the information themselves using a self-service type model.
The Personal Data requested is required to be provided in a format and structure which is commonly used and machine-readable. The following machine-readable formats:

- CSV: (Comma separated values) a format that stores tabular data (numbers and text) in plain-text form;
- PDF: (Portable Document Format) a file format used mainly to represent documents such that layout will stay the same independent of the system environment;
- XML: (eXtensible Markup Language) a markup language that defines a set of rules for encoding documents in a format that can be both human and machine readable;
- JSON: (JavaScript Object Notation) a machine-readable data format derived from the JavaScript language used for representing simple data structures and associative arrays; or
- HTML: (HyperText Markup Language) the main markup language for displaying web pages and other information in a web browser.

FTI has a data erasure process in place to track and manage responses, and, as necessary, provide updates to the relevant regulatory authority and/or input into management reports. The organization must verify the identity of the data subject before disclosing any personal information. The organization should only refuse to comply with an erasure request if it is “manifestly unfounded or excessive” or, alternatively may elect to charge a “reasonable fee.” The response is in written communication together with the documents containing the proper erasure of data.
