RAN Huawei Expert

Found in: beBee jobs IQ - 7 days ago

Apply

Erbil, Erbil, Iraq KOREK Telecom Ltd. Full time

Number of Positions 1 **Experience** 5-10 years of work experience in relevant field. **Education** Bachelor in Telecommunication, Electrical or Electronic Engineering. **Location** Erbil

Summary

Supervise and work on the Huawei Swap project in KRG Region and work on the Huawei network to have a stabile network performance and achive targeted KPIs.

Key Responsibilities

End to End, Radio Design for 2G/3G/4G/5G.

Set RF Division action plans and KPI targets for 2G, 3G, 4G ,5G Do Passive/Active IBS Design on Planning tools Identify and anticipate network performance issues.

Provide recommendations for improvement and do network resource and license dimension plan. Determine the coverage, quality and capacity requirements for every region/area. Set recommendations to resolve problems and Adding/Expanding Sites/Licenses Perform RF planning (using Atoll), traffic planning, and traffic growth forecasting. Interface with vendor support for all related issues of radio planning and pptimization.

Strategic planning for all required equipment from the radio perspective Optimize the capacity of the network to meet traffic increase.

Ensure that design & optimization guarantees the capability for the network to provide end-user new services. Secure the competence transfer to local staff. End to End, Radio Optimization for 2G/3G/4G/5G. Pre-Optimization Features/Parameters Analysis. Perform physical and soft parameter planning. Identify and anticipate network performance issues and provide recommendations for improvement. Optimize the capacity of the network to meet traffic increase. Ensure that design & optimization guarantees the capability for the network to provide end-user new services.

Competencies

Competence in KPI Counters and Root Cause analysis and Problem solving 3G/4G/5G network.

Proven ability of optimizing and design UMTS/LTE/5G networks at a single NodeB, cluster and multi-cluster levels for multiple carriers to meet specific KPI targets.

Good team player & analytical skills Experience in UMTS/LTE/5G networks and KPI base system optimization. Strong knowledge on RF Optimization tools. Good knowledge of RF design method and procedure. Ability to Work with Planning Tools (Atoll, IBwave) is preferred. Ability to present workshops regarding LTE Radio Network requirements. Must have experience in Ericsson and Nokia, and preferably, in Huawei equipment.

Language

English (required) Kurdish (required)* Arabic (preferred)

Jordan Ummiah 5G SA/NSA Radio Project 2022-2023

Oct 2022 - Present

Associated with Huawei

- > On-site Project Support on Invitation of Jordan Rep Office in Open Bidding.
- > Preparation of HLD, LLD, BOQ, Technical Proposal and Commercials as per customer RFP.
- > Configuration of Quotation for Huawei Licenses (Hardware Licenses, Feature Licenses and Huawei Value added Software Features etc.).
- > Existing Network Analysis for Hardware Capability.
- > Solution Presentation, Negotiation and Clarification to customer.
- > Solution alignment with internal Service and Delivery team.

Skills: High-Level Design · Technical Proposal Writing · Wireless Network Design · Target Network Design · Presentation to Customer, Solution Guidance · Low-Level Design · Network Insight, Traffic Forecast and Proposing Huawei Solution.

Iraq Zain Capex 2020-2023

Sep 2020 - Present

Associated with Huawei

- Preparation of HLD, LLD, Internal BOQs and Customer BOQs.
- > Existing Network Analysis for Capability requirement for Network Modernization.
- > Solution Clarification with customer.

Skills: High-Level Design · Technical Proposal Writing · Wireless Network Design · Target Network Design · Presentation to Customer, Solution Guidance · Low-Level Design · Network Insight, Traffic Forecast and Proposing Huawei Solution.

Iraq Korek Swap Project 2023

Sep 2020 - Dec 2022

Associated with Huawei

- > Preparation of Internal Bill of Quotation(BOQs) and Commercial Design as per customer RFX.
- > Preparation of Internal Meetings Material (Project Background, Customer Pain Points etc.).

Skills: High-Level Design · Technical Proposal Writing · Wireless Network Design · Target Network Design · Presentation to Customer, Solution Guidance · Low-Level Design · Network Insight, Traffic Forecast and Proposing Huawei Solution.

Iraq Ooredoo Asiacell CR3.0

Dec 2021 - May 2022

Associated with Huawei

- > Preparation of HLD, Technical Proposal and BOQs as per customer RFP.
- > Customer Meetings to align the Solution and Clarifications.

Skills: High-Level Design · Technical Proposal Writing · Wireless Network Design · Target Network Design · Presentation to Customer, Solution Guidance · Low-Level Design · Network Insight, Traffic Forecast and Proposing Huawei Solution.

Pakistan Ufone 5-Years RFP Network Expansion and New Rollout 2022-2026

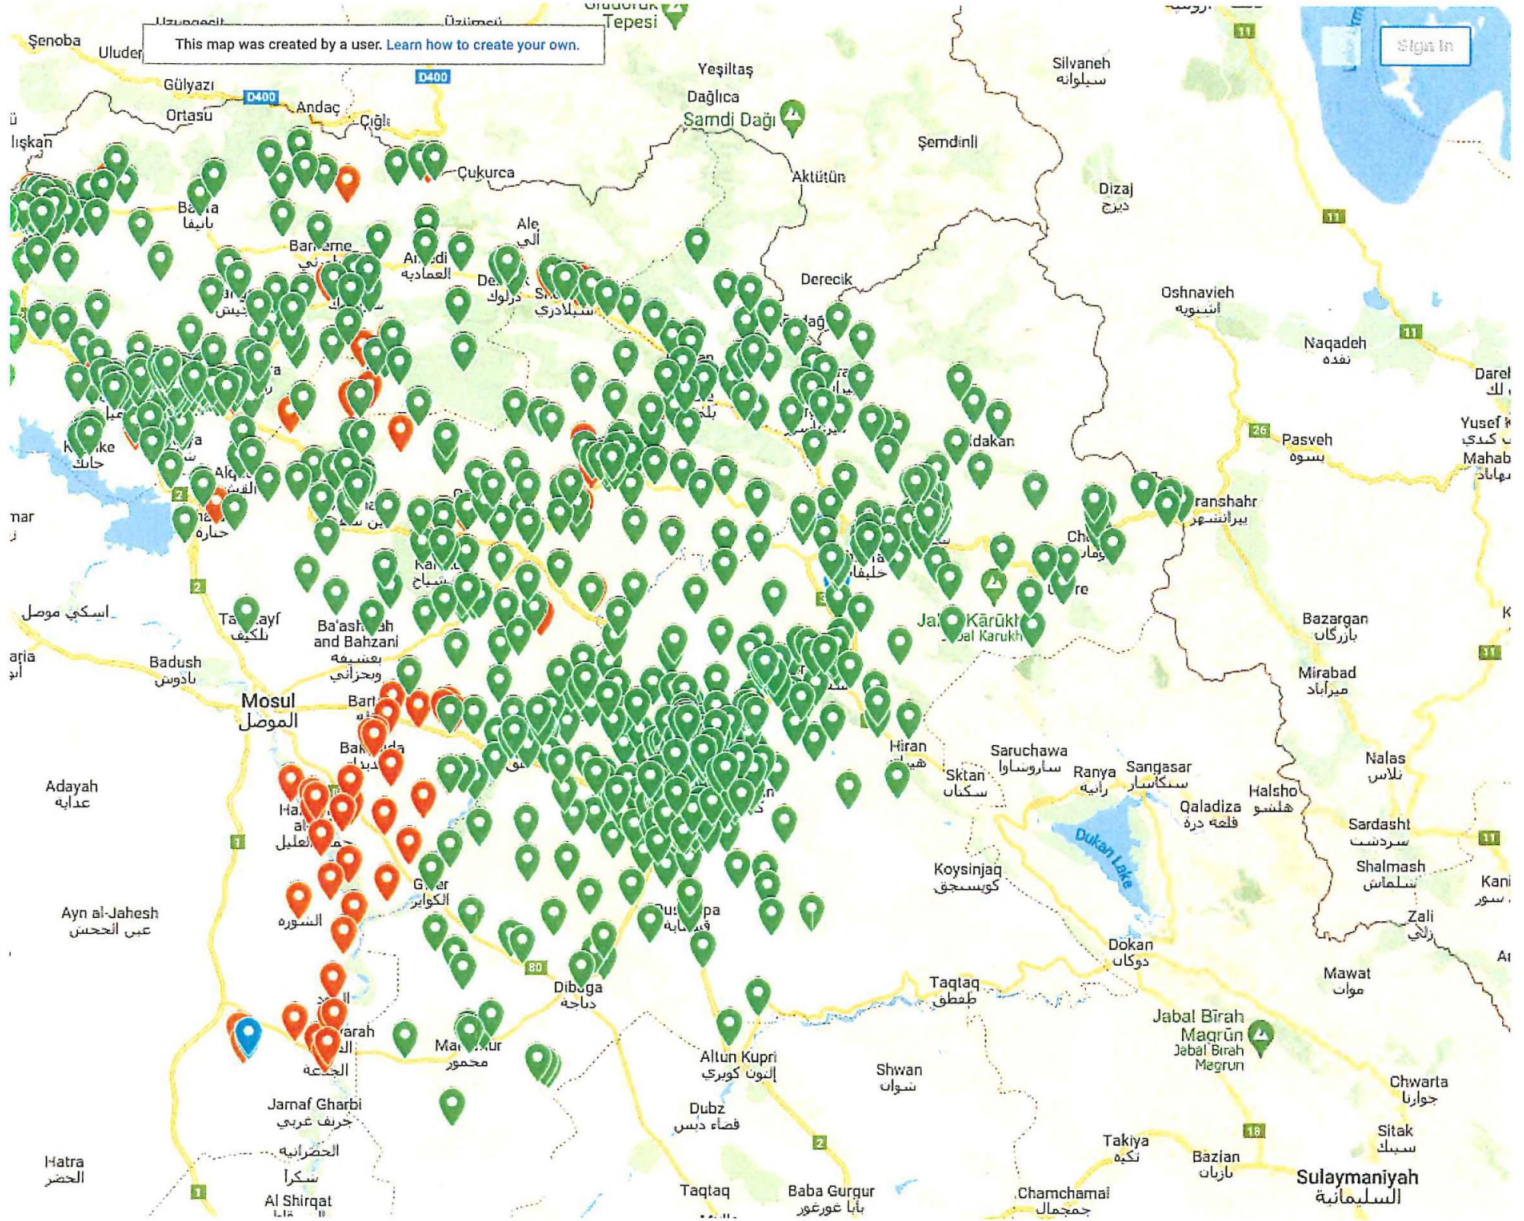

Sep 2021 - Jan 2022

Associated with Huawei

- > Preparation of Internal Bill of Quotation(BOQs)

Wireless Product Manager at Huawei Technologies STC Account

Summary

4+ Years of experience as Wireless Product Manager at Huawei Technologies which includes but not limited to Technical Sales Business support for multiple Operators in the Middle East Region.

Experience

Huawei

5 years 2 months

Product Manager

February 2024 - Present (11 months)

Acting as the Wireless Product Manager towards Saudi Telecommunication Company (STC)

> To achieve company goals, generate leads and sales by presenting our solutions to STC, convincingly answering questions and creating a clear vision of our products.

> As frontline, to ensure smooth solution implementation by aligning STC requirements with RF team for RF Planning and predictions, mitigating risks with HQ experts, managing the supply chain, coordinating delivery and implementation.

> Supporting Huawei account team in commercial negotiations with STC Procurement team.

> Develop a customized wireless solution aligned to the STC network needs, providing them with an optimal technical and commercial proposal by making HLD, Technical Proposal, Commercial Proposal (BOQ).

> Explore STC pain points by analyzing market potential, competition landscape, network pain points, Huawei's new solutions, and industry trends, and seek Huawei's breakthrough points

This material is distributed by Quinn Emanuel Urquhart & Sullivan, LLP on behalf of Agility Public Warehousing Company KSCP. Additional information is available at the Department of Justice, Washington, DC.

- > Understand STC network problems (performance, development, O&M, and business) and operation issues (market development, competition issues, CAPEX (capital expenditure)/OPEX (operating expense), internal management, and operation efficiency)
- > Live Network Analysis, Network Insights to visualize the Current Network picture to customer and presenting the Huawei solutions to optimize their network
- > Participate in customer relationship development

Wireless Product Manager

April 2020 - February 2024 (3 years 11 months)

Islamabad, Pakistan

Acting as the Wireless Product Manager for Middle East Region Operators to Demonstrate Huawei's capabilities to customers and stimulate customer's interests.

Key Responsibilities:

- > Leading the project, From Lead to Contract
- > Solution Design and Product Selection.
- > Analyze project background and output materials HLD, LLD, Technical Proposal and BOQ Configuration till PO Registration as per Huawei Digital Transaction Process .
- > Solution Presentation to customer.
- > Live Network Analysis and Target Network Design.
- > Customer Negotiation and Solution Clarification.

Wireless Network Design

November 2019 - April 2020 (6 months)

Islamabad Pakistan

Acting as the Wireless Network Design Engineer

Key Responsibilities:

- > Bill of Quotation and HLD for Wireless Product with RTUs and Software Features.
- > Contracts Publishing as per transaction flow operations from lead to cash as per Digitalization Process.

National Centre for Physics

Micro-controllers Programmer

January 2019 - April 2019 (4 months)

Islāmābād, Pakistan

Three Months Internship included the Python Programming and several microcontroller projects.

Key Responsibilities:

- > Microcontrollers Programming mainly for Arduino
- > Sensors and Actuators Interfacing for Digital Displays
- > Python Programming for Basic Functions of Simulations
- > Simulation on Matlab and Proteus Professional.

National Institute of Electronics

Development of Robotics by Programming

June 2017 - August 2017 (3 months)

Islāmābād, Pakistan

Internship Provided by Govt of Pakistan during the Graduation to Orient the University Projects into Industry level. Key Responsibilities:

- > Designing of Robotics to perform different functions.
- > Microcontrollers Programming mainly on Atmel and PIC
- > Controlling Inverters, Motors and Relays etc by using Sensors.
- > Projects Report Preparation and Presentation to the board.

Education

Preston University

BS, Electronics · (2015 - 2019)

Installation Solution

Network modernization Project

No CR No Work!

- Enter and leave site, must call MS NOC
- Hot Line:
BSS: 0750 4450015

Network Safety

- 1- Any change operation on the live network solution should be executed strictly according to the Down time approved by customer
- 2- Do not accept any temporary un-planned change operation arrangement
- 3- Any extra operation out of the change solution is prohibited
- 4- There must be another engineer to confirm the each step operation during the important change
- 5- Any incident must report to the product line team leader and CS Manger
- 6- Confirm all service are running well with the monitor center before the leave

No CR No Work! Call Customer NOC before enter or after leave site!
Any unclear issue call BO!

Preparations

Prepare tools and cables required for installing the Outdoor Power Cabinet . Choose cables that comply with electrical specifications and ensure that cable colors meet local power cable standards .

 Paper knife	 Marker pen	 Rubber hammer	 Phillips screwdriver	 Flathead screwdriver
 Combination spanner	 Adjustable spanner	 Torque spanner	 Socket spanner	 Diagonal plier
 Wire clippers	 Power cable cutting pliers	 Power cable crimping pliers	 Hydraulic pliers	 Wire stripper
 Percussion drill	 Drill bit	 Clamp meter	 Hot air gun	 ESD-preventive wrist strap
 Vacuum cleaner	 Ladder	 Antistatic gloves	 Protective gloves	 Steel tape

TOOL004

Safety Precautions

- **General Safety Precautions**

- This product should be used in the environment that meets design specifications. Otherwise, the product may be damaged, and the resulting product exceptions or component damage are beyond the warranty scope.
- Only trained and qualified personnel are allowed to install, operate, and maintain Huawei equipment.
- Comply with local laws and regulations. The safety instructions in this document are only supplements to the local laws and regulations.
- Do not operate the device or cables during lightning strikes.
- Remove metal objects such as the watch, bracelet, or ring during operations.
- Use insulated tools during operations.
- During installation and maintenance, follow the specified procedure.
- Before you touch any conductor surface or terminal, use an electric meter to measure the contact point voltage. Ensure that the contact point has no voltage or the voltage is within the specified range. If the power system is not connected to batteries or the battery capacity is insufficient, the load may power off during maintenance or fault locating.
- After device installation, perform routine check and maintenance according to the user manual and replace faulty components in a timely manner to ensure secure device running.

Huawei Equipment Description

- RRU :Remote radio unit .
- BBU: Baseband unit .
- UMPT :Universal main processing and transmission unit
- UBBP :Universal baseband processing unit .
- UPEU :Universal power and environment interface unit .
- DCDCU : Direct current distribution unit .
- SLPU : Signal lightning protection unit .
- RTN : Radio transmission node
- AISG : Antenna Interface Standards Group
- UIM05B1 : User Interface Module

Huawei Cabinet type

- **Outdoor Single Cabinet:** Access sites will install one outdoor cabinet for battery and telecom Equipment .

Cabinet Specification

- Dimension (W × D × H): Cabinet: 750mm × 750mm × 2000mm (excluding base)
- Base: 750mm × 750mm × 150mm
- Use for Battery & Telecom installation .
- User space :18U and 2 Sets of Battery
- LLVD branch :2 × 125A MCB, 3 × 63A MCB
- BLVD branch: 2 × 63A MCB, 2 × 32A MCB, 2 × 16A MCB

RRU5513(1800/2100M)

RRU Fiber Cable And SFP Module

RRU CPRI Fiber

Figure 1 Exterior of the dual-core optical fiber with DLC connectors

CPRI Label on the Breakout Cable	Connection Between a BBU and an RRU(Recommend)
1A	CPRI RX port on the RRU
1B	CPRI TX port on the RRU
2A	CPRI TX port on the BBU
2B	CPRI RX port on the BBU

RRU/BBU SFP Module

An optical module transmits optical signals between an optical port and an optical fiber.

Optical modules can be classified into single-mode and multimode optical modules, which can be distinguished as follows:

- The puller of a single-mode optical module is blue and the puller of a multimode optical module is black or gray.
- The transmission mode is displayed as "SM" on the label of a single-mode optical module and "MM" on the label of a multimode optical module.

Optical modules must be used in pairs on both ends of an optical fiber.

SFP duplex (two-fiber bidirectional, duplex for short) optical module.

There is a label on each optical module, which provides information such as the rate, wavelength, and transmission mode, as shown in the following figure.

Note:
RRU SFP will be 9.8G(10G) Single Mode

- (1) Rate
- (2) Wavelength
- (3) Transmission distance
- (4) Transmission Mode

RRU Jumper and AISG Cables

RRU5909/RRU5502/RRU5513/RRU5910

RRU Jumper Cable

For an RF jumper, one end is a 4.3-10 male connector to connect to RRU, and the other end is connected to a connector based on antenna port requirements, which is a 4.3-10 male connector or DIN male connector.

DIN and 4.3-10 female connector example

RRU RET AISG Cable

An AISG multi-wire cable has a waterproof DB9 male connector at one end and a standard AISG female connector at the other end:

(1) Waterproofed DB9 male connector

Figure 1 AISG multi-wire cable (1)

Figure 2 AISG multi-wire cable (2)

RRU RET AISG Extension Cable

(1) AISG standard male connector (2) AISG standard female connector

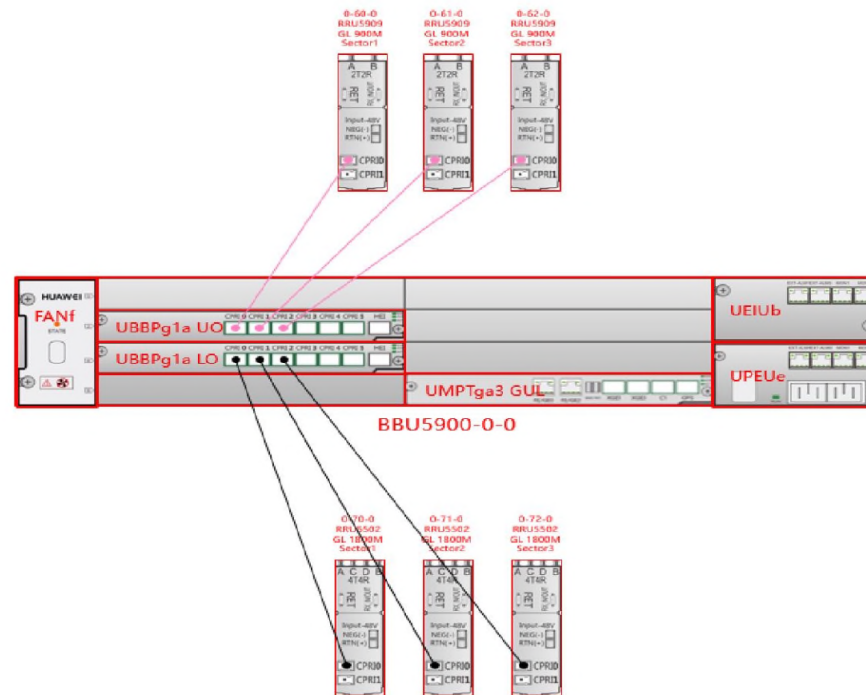

Site Scenarios

- **Scenario 1 GU900 (RRU5909 ,S111) + GL1800/UL2100(RRU5502, S111)**
- **Scenario 2 GU900(RRU5909, S111) + GL1800/UL2100(RRU5513, S111)**
- **Scenario 3 GU900(RRU5910 , S111) + GL1800/UL2100(RRU5513, S111)**

Scenario 1 :GU900(RRU5909)+GL1800/UL2100(RRU5502) New Antenna(3 Sector)

BBU and RRU CPRI Connection

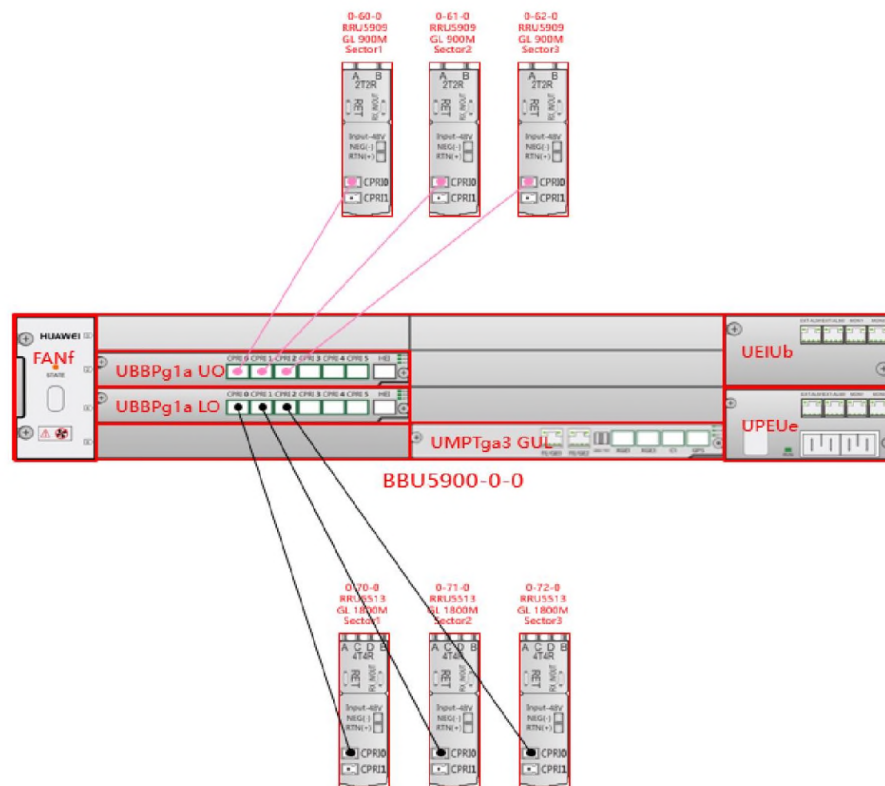

Description of work :

- Install New BBU5900+1*UMPTga3;
- Install 2*UBBPg1a;
- Connect BBU Power cable on DCDU
- Connect BBU Fiber and SFP to Transmission Device
- Connect BBU EXT Alarm Cable from UPEU to DDF(external alarm box)
- Dismantle E// BBU and Cabinet and antenna after Swap finish

Scenario 2: GU900(RRU5909)+GL1800/UL2100(RRU5513) New Antenna(3 Sector)

BBU and RRU CPRI Connection

Description of work :

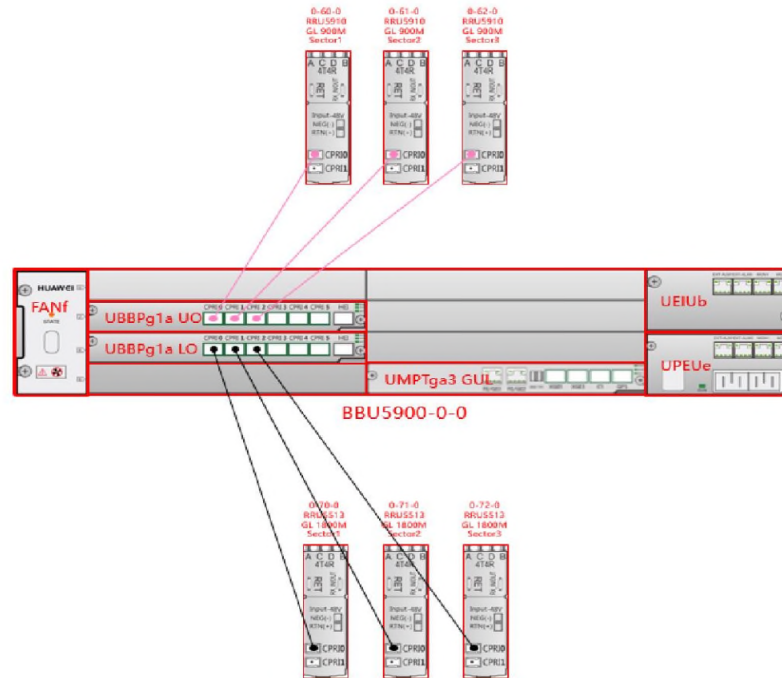

- Install New BBU5900+1*UMPTga3;
- Install 2*UBBPg1a;
- Connect BBU Power cable on DCDU
- Connect BBU Fiber and SFP to Transmission Device
- Connect BBU EXT Alarm Cable from UPEU to DDF(external alarm box)

- Dismantle E// BBU and Cabinet and antenna after Swap finish

Scenario 3: GU900(RRU5910)+GL1800/UL2100(RRU5513) New Antenna(3 Sector)

BBU and RRU CPRI Connection

Description of work :

- Install New BBU5900+1*UMPTga3;
- Install 2*UBBPg1a;
- Connect BBU Power cable on DCDU
- Connect BBU Fiber and SFP to Transmission Device
- Connect BBU EXT Alarm Cable from UPEU to DDF(external alarm box)

- Dismantle E// BBU and Cabinet and antenna after Swap finish

Fourth sectors Connection Solution :

The 4th Sector will connect to Port3 of UBBPg1a boards

Description of work :

- Install New BBU5900+1*UMPTga3;
- Install 3*UBBPg1a;
- Connect BBU Power cable on DCDC
- Connect BBU Fiber and SFP to Transmission Device
- Connect BBU EXT Alarm Cable from UPEU to DDF(external alarm box)
- Dismantle E// BBU and Cabinet and antenna after Swap finish

If there are only two Sectors on site so need to install
Only One UBBPg1a on Site "Slot4 :

Received by NSD/FARA Registration Unit 06/05/2025 8:02:33 PM

Standard For Site Scripting

For RRU

DCDU16D-02 Circuit Breaker Design Support (RRU5513,RRU5502)

Description of work for RRU :

- Install 1*DCDU16D-02
- Connect 3*RRU5513 or 3*5502 on DCDU
- Connect 1*BBU 5900

DCDU-12B Circuit Breaker Design Support (RRU5910, RRU5909)

Description of work for RRU :

- Install 1*DCDU12B
- Connect 3*RRU5910 or 3*5909 on DCDU-12B
- Connect 1*BBU 5900

DCDU-12B/DCDU16D-02 Supported RRU Power Description

Part Number	Model	Description	DC Power Distribution Unit DCDU16D-02 (2122720)	DC Power Distribution Unit(12B) (2120731)
02311TBA	WD5M9E5909GB	RRU5909 for Multi-Mode 900MHz(2*60W)	/	Yes/ can support 6 PCS

DCDU-12B Circuit Breaker Description

Base Station	Application Scenario	DC Output Port	Power-Consuming Equipment	Fuse Specifications
DBS3900	<ul style="list-style-type: none"> Power cabinet TMC11H (Ver.D) or TMC11H (Ver.E) in a DBS3900 DBS3900 where the BBU is installed on a wall, in a 19-inch rack, or in an IMB03 	LOAD0 to LOAD5	RRU	10x30 A ^b
		LOAD6 and LOAD7	Transmission equipment, BBU, or RRU ^a	
		LOAD8	Transmission equipment or RRU ^a	
		LOAD9	FAN 02D or FAN 02E	
BTS3900AL (Ver.A)	BTS3900AL (Ver.A) configured with RFUs and RRUs	LOAD0 to LOAD8	RRU 0 to RRU 8	10x30 A
BTS3900AL (Ver.A)	BTS3900AL (Ver.A) configured with RFUs and RRUs	LOAD9	Reserved	10x30 A
<ul style="list-style-type: none"> BTS3900A (Ver.D) BTS3900A (Ver.E) BTS3900 (Ver.D) BTS3900L (Ver.D) BTS3012AE (Ver.D_Z) BTS3012 (Ver.D_Z) 	<ul style="list-style-type: none"> RFC (Ver.D) in a BTS3900A (Ver.D) configured with RFUs and RRUs RFC (Ver.E) in a BTS3900A (Ver.E) configured with RFUs and RRUs Cabinet in a BTS3900 (Ver.D) configured with RFUs and RRUs Cabinet in a BTS3900L (Ver.D) configured with RFUs and RRUs Cabinet in a BTS3012AE (Ver.D_Z) configured with RFUs and RRUs Cabinet in a BTS3012 (Ver.D_Z) configured with RFUs and RRUs 	LOAD0 to LOAD8	RRU 0 to RRU 8	10x30 A
		LOAD9	Reserved	

a: When six or fewer RRUs are configured, connect the RRUs preferentially to power ports LOAD0 to LOAD5. Ports LOAD6 to LOAD8 only supply power to the seventh to ninth RRUs when more than six RRUs are configured.

b: The output current of one circuit cannot exceed 25 A.

DCDU16D-02 Circuit Breaker Description

DC Output Terminal	Power-Consuming Equipment	Circuit Breaker/Fuse Specifications
LOAD0 to LOAD2	RRU	3x50 A ^a
LOAD3 to LOAD6	Transmission equipment, BBU, or FAN	4x30 A ^b

a: Each power output is less than or equal to 50 A.

b: Each power output is less than or equal to 25 A, and the total power output is less than or equal to 60 A.

No.	Port and Terminal	Silkscreen	Connector and Cable	Description
(1)	DC input terminals	<ul style="list-style-type: none"> NEG(-) RTN(+) 	Two one-hole OT terminals (M6). One group of power cables with a maximum cross-sectional area of 35 mm ² (0.054 in. ²) or two groups of power cables with a maximum cross-sectional area of 25 mm ² (0.039 in. ²) are supported.	<ul style="list-style-type: none"> Negative power input terminal Positive power input terminal
(2)	Circuit breaker output ports ^a	LOAD0 to LOAD2	Bare wires. The supported cable cross-sectional area ranges from 6 mm ² to 16.7 mm ² (0.0093 in. ² to 0.026 in. ²).	For the specifications of DC outputs, see Table 3.
(3)	Fuse blocks ^b	LOAD3 to LOAD6	-	It controls the LOAD3 to LOAD6 ports, and therefore controls the power supply to modules such as BBUs, transmission equipment, and fan assemblies.
(4)	DC output ports	LOAD3 to LOAD6	EPC4 connectors ^c are used for the LOAD3 to LOAD6 ports. Figure 3 shows the exterior. The supported cable cross-sectional area ranges from 1.5 mm ² to 4 mm ² (0.0023 in. ² to 0.0062 in. ²).	For the specifications of DC outputs, see Table 3.
(5)	Spare fuse box	-	-	It contains two 30 A spare fuses.

a: The wiring terminals of circuit breakers must be connected to cables onsite.

b: The indicator on the fuse block indicates the status of the fuse. When the indicator is steady on, the fuse is faulty and must be replaced. When the indicator is steady off, the fuse is working properly.

c: EPC4 connectors must be connected to cables onsite.

External Alarm solution

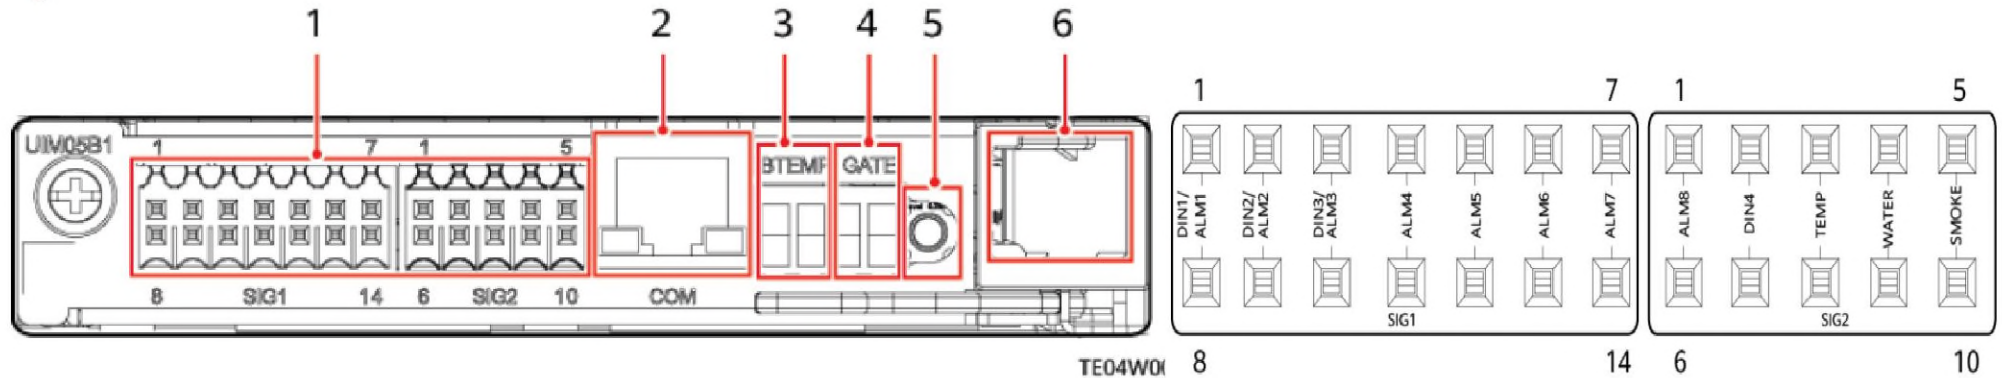

Huawei Solution for Alarm Reporting – UIM05B1 Hardware Description

UIM05B1

The UIM05B1 provides sensor ports, RS485 ports, and dry contact input and output ports to manage the interior environment of the power system and to report alarms.

Figure 1 Exterior of an UIM05B1

UIM05B1 Slot Assignment Rules

(1) Dry contact ports and sensor ports	(2) COM communications port	(3) Battery temperature sensor port

GPS Antenna installation with Water proof & label and Ground

Arrester install inside cabinet and GPS antenna installed in free space area

Risk: Some sites are without sunshade shelter need to install GPS on bottom on tower leg required to add more coaxial cable length

Cabinet Quality standard key points

Key Points:

- I. At green field sites, cabinets should be installed on a concrete slab and this slab should be big enough to accommodate 2 cabinets to allow for future expansion;
- II. A key consideration in the location of the cabinet is to install the cabinet as close as possible to the vertical feeder runway on the tower so as to minimize the volt drop to the RRU's

Loop Standard with labeling

- Fiber loop will fix on the try Box near cabinet as below photo.
- RRU DC cable without Loop .
- Put loop inside Box and fixed by cable ties and label it .
- Box Location 1-2M near to cabinet location .

Cable entrance of Outdoor cabinet

Cable entrance of Indoor cabinet

Cable Ladder & Cable Tray

- 1- All the CPRI cables and RRU DC cable and IF cable should be arranged inside cable tray as well from the mini shelter to the tower.
- 2- keep with space between IF, DC And CPRI
- 3- All cables are labeled
- 4- 1.5 Meter Between each two Clamp.
- 5- Clamp must be per_Sector.

Waterproof for RF Jumper Cable

Three layers of insulation tape and cable ties

- A. Wrap three layers of PVC insulation tape. Start the wrapping at a position 30 mm (1.18 in.) away below the bottom of the waterproof tape to the top of the connector, first from bottom up, then from top down, and finally from bottom up. Cut off the redundant tape after three layers are wrapped. Wrap each layer of tape around the connector tightly.**
- B. start binding cable ties to the cable at a position 3 mm (0.12 in.) to 5 mm (0.2 in.) away from one end of the PVC insulation tape**

Site cable label description

➤ Color Ring Label Standard

Sectors	Position	Color ring	Color ring Triple band			Remark
		Single Band	900 Band	1800 Band	2100 Band	
1	Near Antenna and Inside HUAWEI Cabinet	1 Red	1 Red	2 Red	3 Red	Each of color ring keep 10mm distance
2		1 Yellow	1 Yellow	2 Yellow	3 Yellow	
3		1 Blue	1 Blue	2 Blue	3 Blue	
4		1 White	1 White	2 White	3 White	

Note :

- Sector 1 :Red color ,Sector 2 :Yellow color , Sector 3 : Blue color, Sector 4 : White
- site have single band :label by one ring only .
- Dual band label 900 band by one ring only and second band label by two rings (1800 or 2100)
- Triple band label 900 band by one ring only ,1800 band label by two rings ,2100 band label by two rings
- Key Points Different color ring descript different sector; Red/Yellow/Blue/White color ring descript Sector1/2/3/4

Site cable yellow label description

Power/Grounding Cable Connection Solution

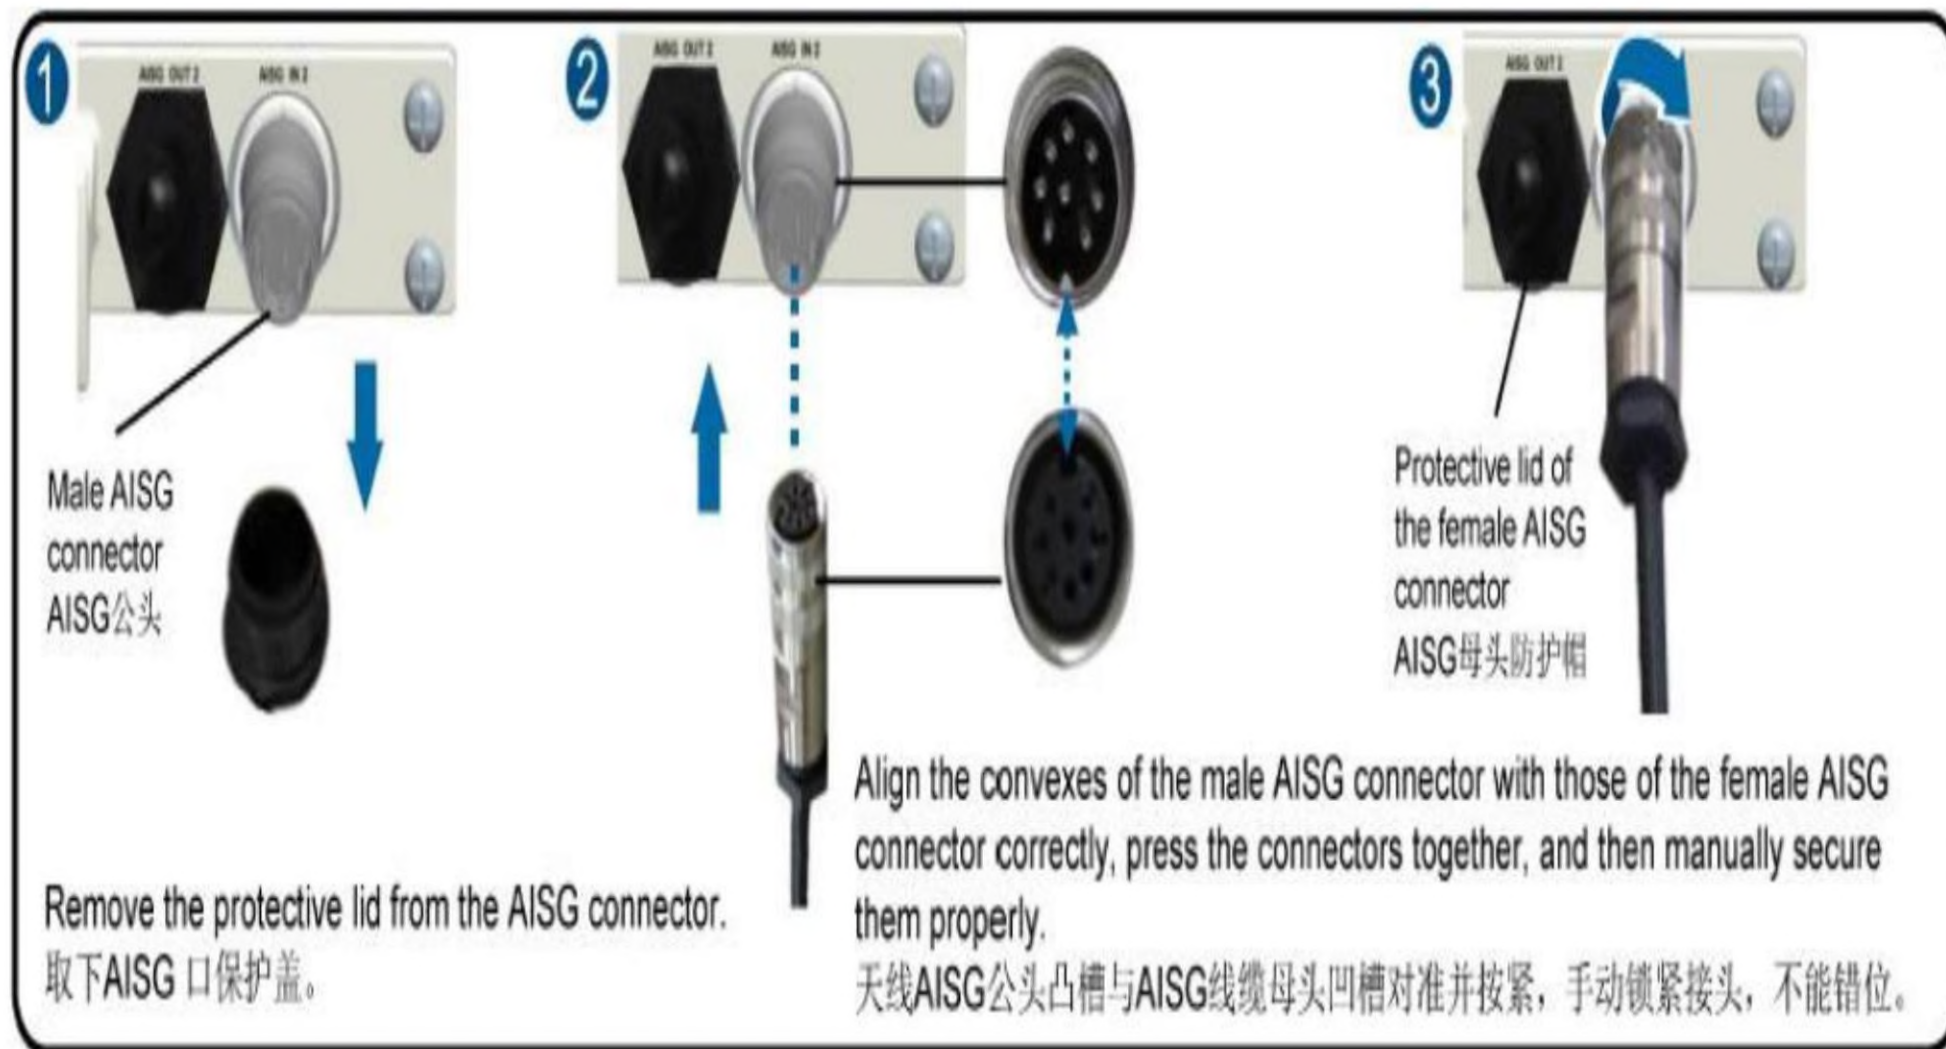

PGND (From RRU to Mini bus bar)	16mm ²	Mini bus bar (In site operation)	
AC Power cable (From HUAWEI Mini-shelter power system to ACDB)	16mm ²	HUAWEI Mini-shelter and ACDB(On Site Operation)	
DC Power (BBU DC Power cable, from BBU to HUAWEI Mini-shelter power system)	3.5mm ²	HUAWEI Mini-shelter (On Site Operation)	
DC Power (IDU DC Power cable, from BBU to HUAWEI Mini-shelter power system)	3.5mm ²	HUAWEI Mini-shelter (On Site Operation)	

RRU Jumper with Label & Water Proof and Jumper cable installation at least the curve not less than 45 degree and should be looped and follow cable installation standard

AISG Cable Connection

Note : for duel band connect AISG cables to 900 RRUs.

AISG Cable with Water proof & Label

Note :AISG cable loop fix on Antenna Mount

Power/Grounding Cable Connection Solution

Grounding – Mini Bus Bar Near Antenna

Key Points:

- 1. Each RRU connect one PGND cable to rooftop BasBar**
- 2. We can use the old Bus Bar if have enough hole or install new Bus Bar if no space . All of grounding cable should be use terminal**
- 3. we will install two ground cables in one BusBar hole but in 2 faces of busbar**

Connect the RRU Ground cable to Bas bar on Tower

RRU DC Power Grounding

➤ RRU side

A tool-less female connector (pressfit type) needs to be added to one end of the power cable on site. A terminal needs to be added to the other end based on the port on the power supply equipment. [Figure 1](#) shows an RRU DC power cable

Figure 1 Installing an RRU power cable

(1) -48 V DC power cable

(2) Shield layer

(3) Tool-less female EPC4 connector (pressfit type)

RRU DC Power Grounding

➤ Cabinet Side

Route the RRU power cable from the RRU side to the power equipment side through the feeder window. Install a ground clip near the feeder window outside the equipment room, and connect the PGND cable on the ground clip to the external ground bar. The procedure for installing a ground clip is as follows:

1. Use a wire stripper to strip 63 mm (2.48 in.) long jacket off the power cable to expose the shield layer.

Figure 1 Stripping the jacket off a power cable

CMR06C2001

RRU DC Power Grounding

2. Wrap the copper sheet of the ground clip around the shield layer of the power cable, and use cable ties to bind them tightly. Then trim off surplus part from the heads of the cable ties without leaving any sharp edge.

Figure 2 Wrapping and tying the copper sheet of the ground clip

(1) Hole for an RRU power cable tie (12 AWG/4 mm² [0.006 in.²])

(2) Hole for an RRU power cable tie (N 6 mm² [0.009 in.²])

RRU DC Power Grounding

3. Wrap three layers of waterproof tape and three layers of insulation tape around the ground clip.

Figure 3 Wrapping the waterproof tape and insulation tape

(1) Waterproof tape	(2) Insulation tape	(3) Cable tie
(4) Power cable	(5) PGND cable	-

Note :RRU DC power cable should be Earthed from both Side Cabinet and RRU

RF System Installation Standard

Telecom Quality standard key points

- RF cable will used 3 M for each sectors .
- Put labels and colored tape in all cables .
- Any cross is not acceptable .
- All the equipment's should be earthed .
- Installation of Terminals and antenna (RF)
- ALL Jumpers, are well waterproofed.
- The vacant RRU ports are securely covered.
- The vacant RF ports of antenna are waterproofed.
- Need to connected AISG Cable between each RRU & Antenna
- Need to connected all Port between RRU & Antenna
- Used Boot less for A.C power connection and ground cable connection
- Fiber optical loop fixed inside the box near cabinet.

Clean Site

(Close the Door & put all the rubbish outside)

Get Confirmation from NOC center that all service running well and no alarm before leave

Thanks
