

National Security Expert Egon Cholakian Breaks Protocol to Speak About Concerning Findings in Recent Documentary 'The Impact'

PRESS RELEASE • JUL 31, 2024

Dr. A. Egon Cholakian, a national security expert and registered federal lobbyist, delivered a landmark video speech in which he presented his in-depth analysis of the growing tensions surrounding geopolitical events and provided new data on the escalating climate crisis.

WASHINGTON, July 31, 2024 (Newswire.com) - Dr. Cholakian's appeal, published on the [Earth Save Science Collaborative Platform](#) on July 26, 2024, has already sparked a discussion among the global community. The facts and analytics presented by Dr. Cholakian are related to the concerning findings from the recent "**The IMPACT**" documentary, which research the causes behind certain world events.

In his video, Egon Cholakian brings to attention such events as the 1993 Waco siege, terrorist attacks in 2001 and 2004, which occurred in the US and Russia accordingly, the ongoing Ukraine-Russia conflict, escalating tensions in the US, and attempted assassinations of high-profile individuals, including the 45th President of the United States and the Prime Minister of Slovakia.

Additionally, Dr. Cholakian specifically elaborated on the "**puzzle coding**" topic raised in "[The IMPACT](#)." He warned that this method of psychological manipulation underlies many recent tragedies, including mass shootings and political violence.

"Puzzle coding is so sophisticated that individuals cannot perceive its influence on themselves," Dr. Cholakian explained. Notably, his address suggested that public

awareness of this threat could significantly reduce its impact.

"The threat of mass shootings worldwide could be minimized by 80 percent, provided that information about the puzzle coding method gains widespread dissemination," Dr. Cholakian stated.

Furthermore, Dr. Cholakian emphasized a statistically significant increase in climate-related disasters within Russian territory since August 2023.

One of the other topics of his video was experimental equipment developed by

scientists affiliated with the [ALLATRA International Public Movement](#).

Dr. Cholakian took a bold step by appealing directly to Russian President Vladimir Putin, warning about concerning future trends. "I still say we need to sit down at the negotiation table," underscores Dr. Cholakian. **"Because if we do not, there will be no Russia, no America—no one. It is time to heed common sense and temper our ambitions."**

About Dr. A. Egon Cholakian

National Security Expert, Registered Federal Lobbyist, U.S. Congress and White House, Registered Foreign Agent, U.S. Department of Justice, National Security Division, who worked with: 4 U.S. Presidents, 3 U.S. National Security Advisors, 1 CIA Director.

Egon Cholakian Explained Europe's Fate If Siberian Plume Erupt And Who In Ukraine Blocking Planetary Protection

Wednesday, 30 April 2025 06:50 AM

Topic: Environmental, Social and Governance

WASHINGTON, DC / ACCESS Newswire / April 30, 2025 / In a vital and comprehensive video release, entitled "[Europe's Fate After Siberian Plume Eruption: Who in Ukraine Blocks Planet's Protection?](#)", American scientist, national security expert, White House lobbyist / Department of Justice registered foreign agent, and ALLATRA International Public Movement Capitol Hill representative, Egon Cholakian addressed two critically important topics of global significance. The first concerns a geodynamic global threat-

the Siberian magma plume (revealing a pattern of concealment by certain power circles within Russia), and the second discloses the identity of a Russian agent operating within the Ukrainian space (currently criminal case has been officially opened against this individual by the Ukrainian Security Service investigation).

Egon Cholakian publicly highlighted the potential threat of the Siberian magma plume, which has captured Russian national media coverage. Having been the focus of a long-term, dedicated study by the [ALLATRA International Public Movement](#), a movement of committed scientists, researchers, volunteers, and activists, Dr. Cholakian explained that for over twenty years, ALLATRA has systematically analyzed the Siberian plume's potential to uncover devastating consequences. Dr. Cholakian warned that if the Siberian plume erupts, it would result in a planetary-scale catastrophe affecting not only Russia but the entire world, with neighboring countries being especially vulnerable. He provided information about the specific consequences this threat would inflict upon Ukraine, its citizens, and the broader Eurasian region, should the Siberian plume become active.

Although Ukraine lies thousands of kilometers from the plume's Siberian epicenter, Dr. Cholakian emphasizes the country's acute vulnerability-especially to ash fallout spanning millions of square kilometers, culminating in irreversible soil degradation to Ukraine's fertile agricultural lands, and crippling damage to vital infrastructure. He stated that Ukraine would face intensive seismic activity, catastrophic agricultural collapse, and critical failures across its energy and transportation sectors. He warned that the Siberian plume's eruption would induce a prolonged super volcanic winter, leading to drastic global cooling and mass extinctions. Egon Cholakian stresses that the threat transcends national and political boundaries, underscoring that natural disasters do not recognize flags and impact humanity collectively.

Dr. Cholakian then centers his dialogue on an alarming situation unfolding in Ukraine. He highlights the actions of specific individuals acting under the influence of Russian authorities in Ukraine, whose efforts obstruct the spread of accurate information about the Siberian plume threat. Key among those identified is Iryna Kremenovska, a Ukrainian national operating as an agent of RACIRS- the Russian Association of Centers for Religious and Sect Studies - an organization closely tied to the Russian Federal Security Service (FSB) and involved in undermining religious freedom worldwide. According to Egon Cholakian, these actions exacerbate risks both for Ukraine and for international security as a whole.

Dr. Cholakian detailed how, under Russian power structures, Kremenovska has launched an aggressive campaign to discredit ALLATRA and its members. He stated that she has reportedly fabricated so-called "expert reports" to initiate criminal

proceedings against key figures within the ALLATRA movement, with the intent to silence advocates of planetary defense and to undermine Ukraine's national security.

In his video statement, Egon Cholakian brought attention to the case of Igor Danilov, the scientist who first identified and publicly warned about the catastrophic potential of the Siberian magma plume. Despite Igor Danilov's pioneering work, Dr. Cholakian noted that he has faced sustained efforts of defamation, persecution, and even multiple assassination attempts-all linked to RACIRS and its ideological leader, Alexander Dvorkin. According to Dr. Cholakian, this campaign against Igor Danilov and the ALLATRA movement represents a deliberate attempt to suppress scientific truth in favor of Russian power structures.

"Mr. Danilov's contribution not only served as a starting point for a range of studies but also exerted an invaluable influence on the scientific understanding of processes that today are directly linked to global security. His proposals made two decades ago, became the foundation for the modern analytical model of Siberian plume activation. Mr. Danilov is also the author of the initial schematic for potential degassing. This concept remains the only realistic strategy for preventing the catastrophic scenario of a Siberian plume eruption," noted Dr. Cholakian.

Despite the gravity of the situation, Egon Cholakian reports that a feasible solution already exists: the controlled degassing of the Siberian magma plume. This scientifically supported engineering approach could significantly reduce subterranean pressure and prevent catastrophic eruptions and earthquakes.

Dr. Cholakian further highlights a global geodynamic crisis tied to the absence of degassing efforts taking place in connection with the Siberian plume. Rising subterranean pressure has contributed to an increase in severe seismic events worldwide, including extraordinary supershear earthquakes.

"The threat posed by the Siberian magma plume can be resolved. That is why your personal involvement becomes absolutely critical-to share this with others. To ensure the information does not fade, does not disappear, and does not get erased from memory. Only when people know does public opinion begin to take shape. And public opinion is no longer just words. It is leverage. It is power," Dr. Cholakian drew attention to the public.

Above all, Dr. Cholakian calls for heightened public awareness and responsibility. He appeals to the global citizenry, and Ukrainians in particular, to champion truth and transparency. Only through an informed, engaged public can political leaders be compelled to act decisively. Humanity's survival depends on overcoming psychological

inertia and embracing the responsibility to support scientific efforts before the critical window for solving this issue.

About Dr. A. Egon Cholakian

Egon Cholakian is a National Security Expert, and a Registered Federal Lobbyist with the U.S. Senate, House of Representatives and White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division. He currently serves as the Capitol Hill representative of ALLATRA.

American Scientist Dr. Egon Cholakian Warns of Rising Global Seismic Activity and Urgent Need for Controlled Degassing

Tuesday, 13 May 2025 06:00 AM

Topic: Diversity, Equity and Inclusion

WASHINGTON, DC / [ACCESS Newswire](#) / May 13, 2025 / In a recent video address, [American scientist Dr. Egon Cholakian](#) presented compelling data indicating a significant and accelerating rise in global seismic activity, particularly earthquakes of magnitude 6.0 and above. Highlighting an exponential trend, Dr. Cholakian warned that, according to calculations, within four years, earthquakes of magnitude 7.0 or greater could occur globally every two to three days-posing a severe threat to densely populated regions.

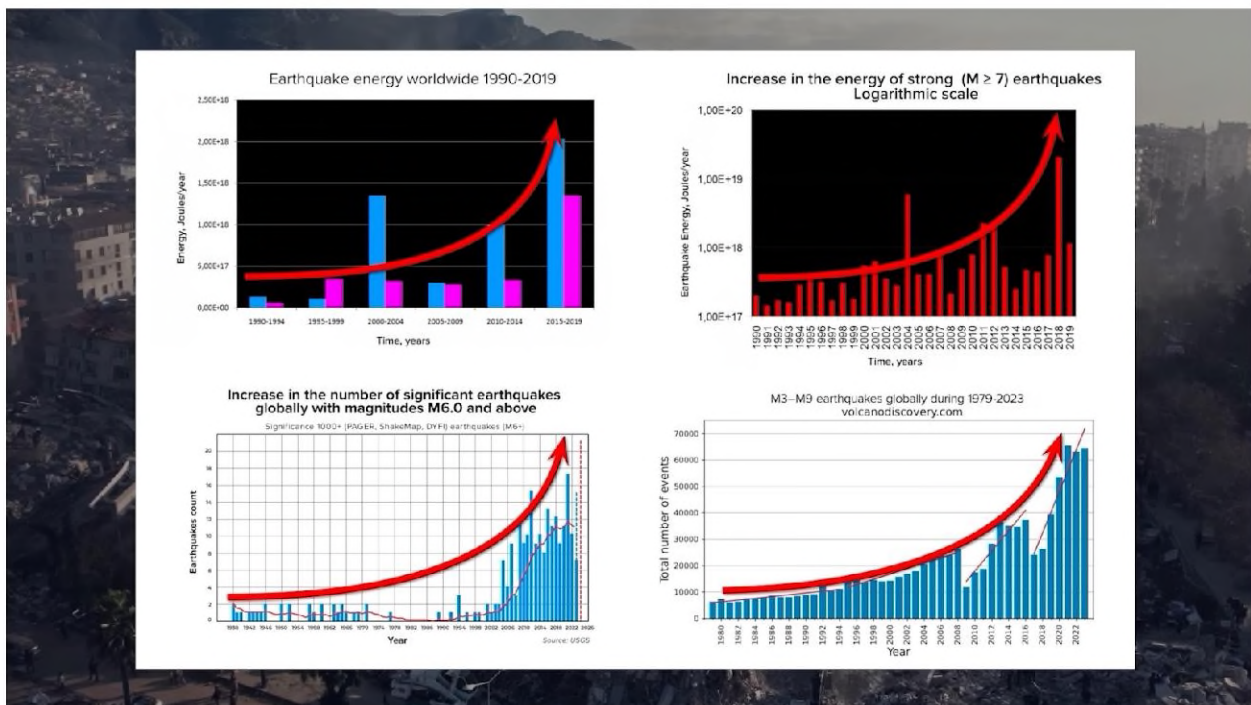

Dr. A. Egon Cholakian

Registered Federal Lobbyist, United States Senate, House of Representatives, The White House Registered Foreign Agent, United States Department of Justice / National Security Division National Security Expert | Representative: ALLATRA

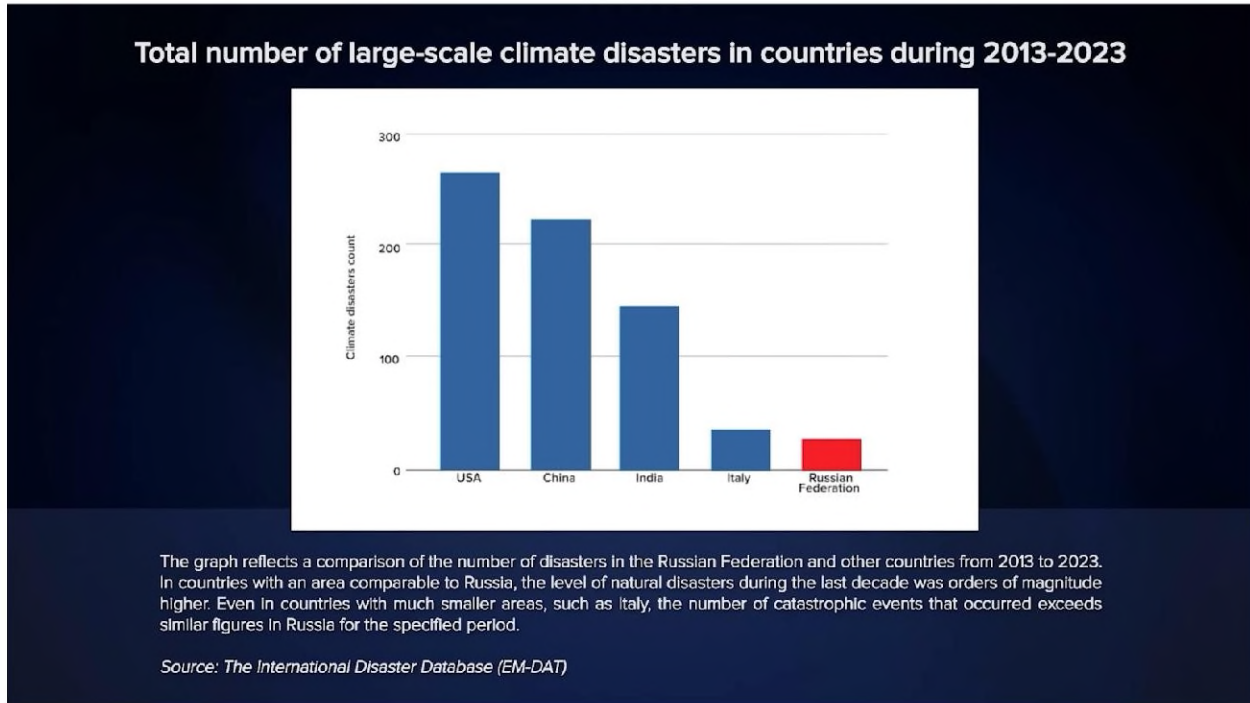

Dr. Egon Cholakian, a Registered Federal Lobbyist with the U.S. Senate, House of Representatives, and the White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division

Dr. Cholakian attributes this trend to external cosmic factors, which recur as astronomical cycles every 12,000 years, as proposed in research by the ALLATRA scientific community. These external cosmic factors, he asserts, affect the Earth's core and mantle, intensifying geodynamic processes, increasing magma movement, and contributing to heightened volcanic and seismic activity worldwide. A particular focus is the Siberian magma plume, an active geological formation in Siberia, Russia.

Rising Seismic Activity: Global Increase in Earthquake Frequency and Energy

Citing ALLATRA's research, Dr. Cholakian emphasized that the plume's activation—specifically, an explosive event—could trigger catastrophic consequences. He recommended immediate attention to planned degassing: a process of controlled venting to reduce internal geodynamic pressure. He further referenced the [report](#), "On the Threat of a Magma Plume Eruption in Siberia and Strategies for Addressing the Issue", urging global review and response.

Total number of large-scale climate disasters in countries during 2013-2023

Egon Cholakian explains that from 2013 to 2023, ALLATRA scientists deployed experimental equipment based on a technological concept proposed by Igor Danilov, which, according to recorded data and graphs, contributed to the stabilization of seismic and climatic extremes, particularly in Russia and Eastern Europe. Dr. Cholakian reported that following the Russian government's designation of ALLATRA as an "undesirable organization" in 2023 and the dismantling of the equipment, the region experienced a notable increase in natural disasters. Most importantly, Dr. Cholakian emphasized that the equipment played a key role in slowing the activation of the Siberian plume, buying humanity time for implementing the planned degassing solution.

In addition to his work in physics and geodynamics, Dr. Cholakian acknowledged that Mr. Danilov had been among the first to highlight the underestimated role of nanoplastics in ocean warming and their impact on human health—issues he began

raising as early as 20 years ago. These concerns have since been substantiated by numerous international studies.

Dr. Egon Cholakian, Igor Mikhailovich Danilov

Dr. Cholakian also introduced Danilov's medical innovation-vertebroevitology-a patented non-invasive spinal treatment method that enables full regeneration of intervertebral discs. He noted that pre- and post-MRI data show the restoration of disc structures once considered irreparable, offering a real breakthrough in medicine.

Dr. Cholakian further noted with concern that the ALLATRA movement and Mr. Danilov have faced an orchestrated campaign of discreditation to undermine their credibility-especially in Russia-where public discourse on the Siberian plume and associated geodynamic risks has been deliberately curtailed by certain power circles in Russia prioritizing their personal incomes over scientific transparency and global security.

He explained that to execute this smear campaign they have resorted to a familiar tactic of manipulation: the use of pseudo-scientific 'anti-cult' groups, most notably led by Russian anticultist Alexander Dvorkin. His network, which includes figures such as Iryna Kremenovska, an agent of the Russian RACIRS network based in Ukraine, has actively worked to discredit the ALLATRA movement and Igor Danilov. Dr. Cholakian underscored that, if not for the interference of 'anti-cult activists'-Dvorkin's international network-the problem of escalating natural disasters could already have been addressed. Instead, the situation continues to deteriorate rapidly.

Dr. Cholakian concludes his address with a scientifically grounded forecast of escalating seismic activity, accompanied by a modeled analysis of the potential consequences-

specifically, what major metropolitan areas could face in the event of earthquakes measuring magnitude 7.0 and above. For a detailed overview of these scientific projections and possible future scenarios, watch Egon Cholakian's video message titled "[Catastrophic Earthquakes Are Inevitable for Humanity.](#)"

About Dr. A. Egon Cholakian

Egon Cholakian is a National Security Expert, and a Registered Federal Lobbyist with the U.S. Senate, House of Representatives and White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division. He currently serves as the Capitol Hill representative of ALLATRA.

About the ALLATRA International Public Movement

ALLATRA International Public Movement is an independent volunteer organization that conducts large-scale geodynamics, and environmental transformation research. The movement is known for its interdisciplinary approach to studying natural disasters and its active role in promoting international scientific cooperation. Additionally, ALLATRA focuses on protecting and preserving human rights and freedoms.

Kamchatka Earthquake Validates ALLATRA's Geodynamic Forecasts, as Examined by Scientist Dr. Egon Cholakian

Tuesday, 05 August 2025 06:00 AM

Topic: Environmental, Social and Governance

WASHINGTON, D.C. / [ACCESS Newswire](#) / August 5, 2025 / In a recent video address, "[Powerful Earthquake in Kamchatka. ALLATRA's Warning Came True](#)", American scientist Dr. Egon Cholakian provides a detailed analysis of the 8.8-magnitude earthquake that struck the Kamchatka region on July 30, 2025, one of the most powerful in recent decades. The event generated tsunami waves reaching Japan, Hawaii, and the western coast of the United States, with localized flooding and evacuations in Severo-Kurilsk and coastal areas of Kamchatka, Russia.

<https://www.bbc.com/news/articles/c0l6pj7kjg7o>

Dr. Egon Cholakian, a Registered Federal Lobbyist with the U.S. Senate, House of Representatives, and the White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division, in his new video address, "Powerful Earthquake in Kamchatka. ALLATRA's Warning Came True"

In the immediate aftermath, at least five strong aftershocks were recorded within hours, with magnitudes ranging from 4.8 to 6.0. Over the next 24 hours, seismic activity remained high, with more than 170 aftershocks of magnitude 3.0 or greater-eight of which exceeded magnitude 6.0 and were felt in populated areas.

Dr. Cholakian views this seismic event not as a localized release of tectonic stress, but as a signal marking the onset of a new acute geodynamic phase. He emphasizes that this phase is accompanied by the activation of the Siberian mantle plume in Russia. The scientist explains that the Kamchatka earthquake is linked to the edge effect caused by immense pressure exerted by the plume on the Eurasian lithospheric plate, and provides a detailed description of the geophysical mechanisms involved.

Impact of the Siberian plume on the Kamchatka region

Publication in March 2025

<https://allatra.org/research>

Thus, similar processes of increasing seismicity and wildfires occur on the opposite side of the Siberian and Far Eastern crustal blocks, along the boundary with the Pacific Plate.

It is assumed that the intrusion of the Siberian plume also affects the Kuril-Kamchatka region as an ending region of a continental crustal block pressured by the plume. An analysis of seismic data in the Kamchatka and Kuril Islands region shows a noticeable increase in M4+ earthquakes (Figs. 72, 73). The region is part of the Pacific Ring of Fire (Fig. 74) and demonstrates a trend of increasing seismicity according to the patterns of its tectonic structure. However, most seismicity spikes are independent. This may indicate that the Siberian Plume exerts its own influence on the Kamchatka and Kuril Islands region.

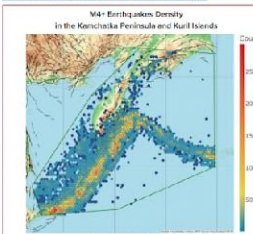

Fig. 72
Earthquake density for M4+ earthquakes in the Kamchatka Peninsula and Kuril Islands region from 1970 to 2024.
Data source: ISC.

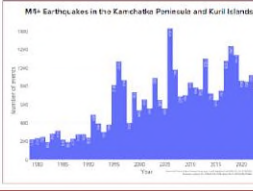

Fig. 73
Increase in the number of M4+ earthquakes in the Kamchatka Peninsula and Kuril Islands region from 1970 to 2024.
Data source: ISC.

ALLATRA Report
"ON THE THREAT OF A MAGMA PLUME ERUPTION IN SIBERIA AND STRATEGIES FOR ADDRESSING THE ISSUE"

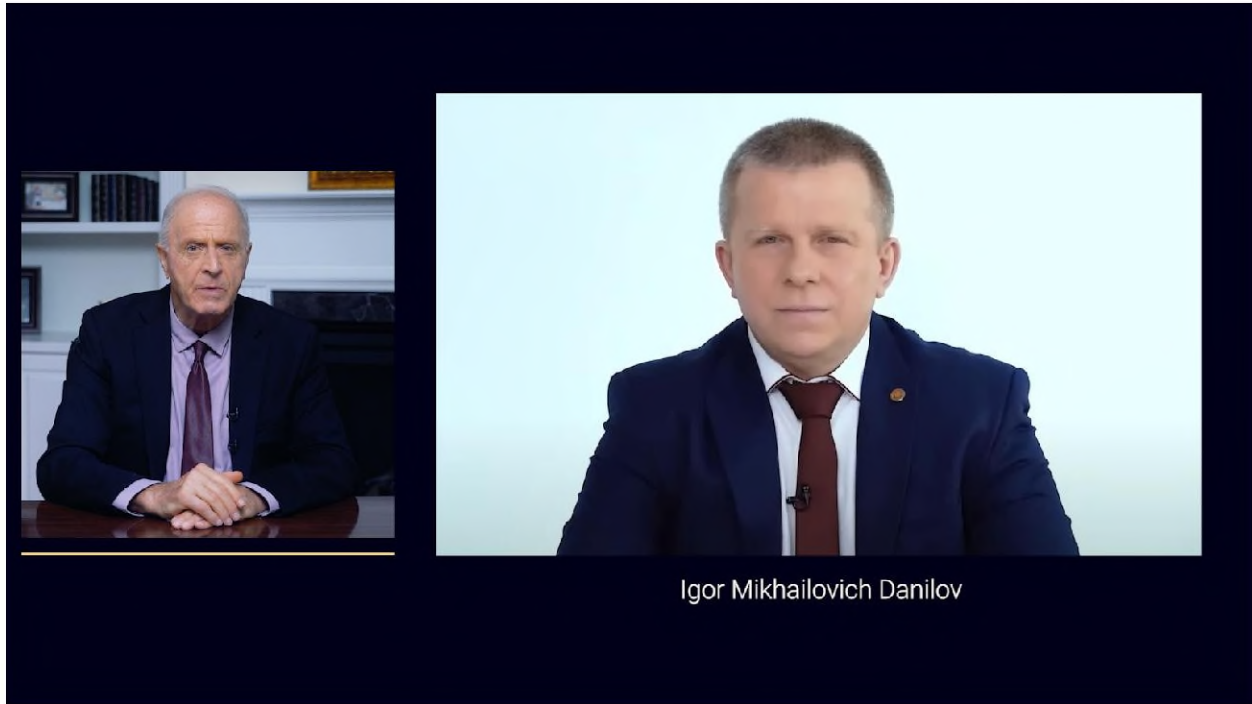

Dr. Egon Cholakian cites the ALLATRA report "On the Threat of a Magma Plume Eruption in Siberia and Strategies for Addressing the Issue", which describes the impact of the Siberian magmatic plume on the Kamchatka region

The Siberian magma plume, a rising stream of superheated material from deep within the Earth, is actively pressing on the lithosphere of Siberia. Its head, 1,200 to 1,500 kilometers (about 745 to 930 miles) in diameter, lies south of the Gydan and Taymyr Peninsulas, with a magmatic flow dispersion zone spanning 2,500 to 3,000 kilometers (roughly 1,550 to 1,860 miles), comparable to the size of Australia.

"The illusion of safety is the most dangerous self-deception of our time," Dr. Cholakian states. "A resident of Los Angeles, Istanbul, or Tokyo, reading the news about Kamchatka, might have thought, 'That's far away. That doesn't concern me.' But that is a delusion. What happened in Kamchatka is not an isolated incident. It is a symptom. It is a clear and unmistakable signal that the global geodynamic system of our planet has entered a stage of active, catastrophic breakdown."

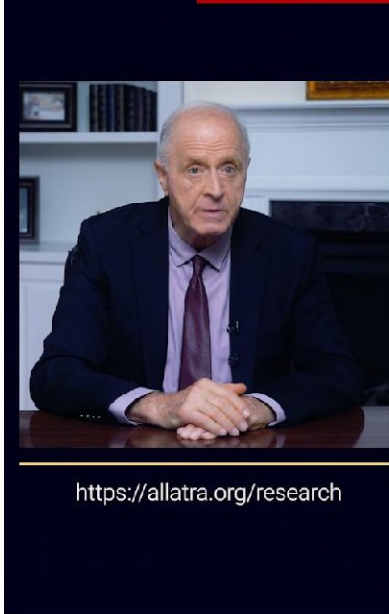

He highlights a forecast by his colleague Mr. Danilov in early June 2025, who forecasted a powerful earthquake with a probable occurrence window extending into early August north of the Japanese archipelago, confirmed by the Kamchatka event and demonstrating the effectiveness of Mr. Danilov's innovative seismic forecasting method.

Dr. Cholakian and Mr. Danilov

Dr. Cholakian presents evidence that [ALLATRA](#) repeatedly warned of such events. The video incorporates excerpts from Dr. Cholakian's prior addresses and ALLATRA analytical reports, showing a correlation between the earthquake and the climate-geodynamic model in the movement's publications. From the ALLATRA report "On the Threat of a Magma Plume Eruption in Siberia and Strategies for Addressing the Issue": Earthquake depths in the Kuril-Kamchatka region are increasing, indicating more dynamic lithospheric plate interactions due to the Siberian mantle plume. An increase in volcanic activity and anomalies in deep magma ascent are expected. Seismic data analysis reveals a rise in M4.0+ earthquakes in the region, part of the Pacific Ring of Fire, with spikes suggesting independent influence from the Siberian plume.

Direct reference to Kamchatka and prediction of increased volcanic activity
Publication in March 2025

<https://allatra.org/research>

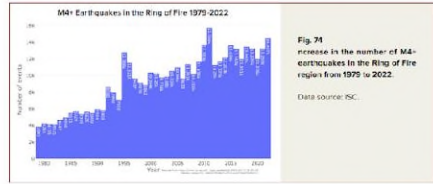

Fig. 74 Increase in the number of M4+ earthquakes in the Ring of Fire region from 1979 to 2022. Data source: ISC.

Remarkably, the depth of earthquakes in the Kuril-Kamchatka region is also increasing (Fig. 75). This indicates that the interaction between lithospheric plates is becoming more dynamic due to the influence of the Siberian mantle plume. An increase in volcanic activity in the Kuril-Kamchatka region is expected, along with the emergence of anomalies in the rapid ascent of ocean magma and a shift toward increasing volcanic eruptions to more mafic magmas. A similar compositional shift towards the deeper sources was demonstrated by the Bezymlyany volcano during its 2017 eruption.¹⁶

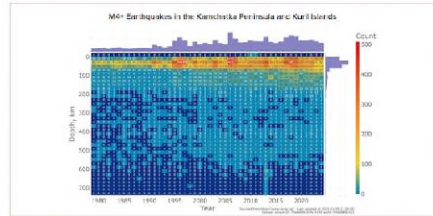

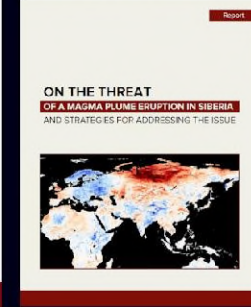

Fig. 75 Distribution of M4+ earthquakes recorded in the selected sector of the Kamchatka Peninsula and Kuril Islands region from 1979 to 2024 by depth. Data source: ISC.

ALLATRA Report
"ON THE THREAT OF A MAGMA PLUME ERUPTION IN SIBERIA AND STRATEGIES FOR ADDRESSING THE ISSUE"

Dr. Egon Cholakian cites the ALLATRA Report "On the Threat of a Magma Plume Eruption in Siberia and Strategies for Addressing the Issue", which describes the forecast for increased volcanic activity in the Kamchatka region as a result of pressure exerted on the plate by the Siberian magmatic plume

Dr. Cholakian critiques the Russian Academy of Sciences' linked to processes not disclosed by them and approaches relying on accumulated tectonic stress or solar activity. Seismic activity has risen exponentially in recent decades, uncorrelated with solar cycles' 11-year rhythm. No anomalous solar activity preceded the Kamchatka earthquake, undermining claims of direct linkage.

<https://www.krainaz.org/ru/2021-02/717-earthquake>

Solar cycle and earthquakes. First of all, let us assess whether solar activity is associated with the most powerful and destructive earthquakes that have caused numerous casualties. To do this, we plotted the number of earthquake victims on a graph with monthly Wolf numbers characterizing solar activity. **It is clearly seen that deadly earthquakes occur in different phases of the solar cycle** – during the period of increasing solar activity (2010 – Haiti, 1935 – Pakistan) and during the period of its decline (2004 – Indonesia, 1920 – China), at the maximum (1948 – Turkmenistan, 1927 – China) and at the minimum (2008 – China, 1923 – Japan) of solar activity.

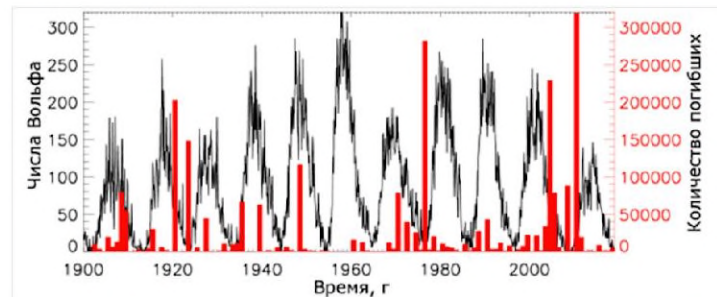

FIG. 3. SOLAR CYCLE (DASHED LINE) AND THE NUMBER OF FATALITIES FROM EARTHQUAKES (HISTOGRAM). THE LEFT SCALE CORRESPONDS TO WOLF NUMBERS, THE RIGHT SCALE TO THE NUMBER OF FATALITIES FROM EARTHQUAKES.

Dr. Egon Cholakian points out the absence of correlation between major earthquakes and phases of the 11-year solar cycle based on open data. The chart from the article shows the solar cycle (in black) and earthquake fatalities (in red). The left scale corresponds to Wolf numbers, while the right scale represents the number of earthquake fatalities

Emphasizing that outdated models and a lack of data transparency hinder threat assessment, Dr. Cholakian warns that Kamchatka marks the start of a more intense geodynamic phase. Future tension releases in weak zones like Yellowstone, the San Andreas Fault, Campi Flegrei caldera, and the Japan Trench are pose a particular threat, given the increasing pressure from beneath. Without decisive action in the coming years for controlled degassing to relieve Siberian plume pressure, earthquakes of magnitude 8.8 could occur worldwide at an average frequency of once per week in five years.

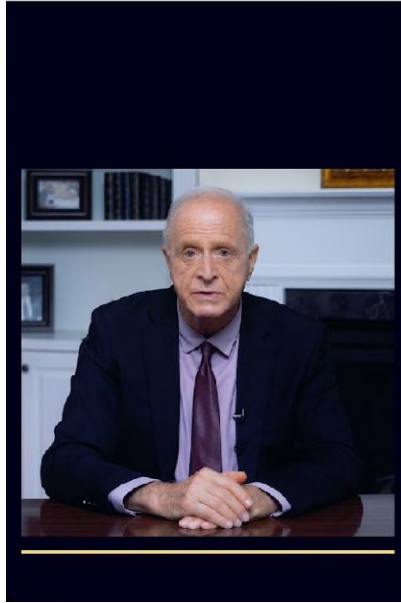

Dr. Egon Cholakian, in his new video address, "Powerful Earthquake in Kamchatka. ALLATRA's Warning Came True"

Dr. Cholakian notes that ALLATRA IPM's interdisciplinary model issued early warnings, leading to its designation as an extremist organization in Russia in June 2025 and laws prohibiting searching on the internet related materials, aimed at concealing the causes of intensifying catastrophes.

Despite repression in Russia, ALLATRA receives international support, including Apostolic Blessings from Pope Francis. In 2025, Pope Leo XIV issued a second blessing, addressed to the movement's president and all its volunteers. At international UN

climate forums, including COP16 and COP29, ALLATRA representatives delivered reports, presented scientific strategies for confronting climate instability, shared innovative solutions, and strengthened global collaboration. This is transparent, evidence-based, results-driven work.

Dr. Egon Cholakian Issues Challenge to Scientific Community and Calls for Global Collaboration on Critical Environmental Threats

Monday, 02 June 2025 06:00 AM

Topic: Environmental, Social and Governance

WASHINGTON, D.C. / [ACCESS Newswire](#) / June 2, 2025 / In a newly released [video address](#), Dr. Egon Cholakian, a Registered Federal Lobbyist with the U.S. Senate, House of Representatives, and the White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division, issues a bold challenge to modern science, proposing the possibility of a groundbreaking experiment that could fundamentally alter the understanding of physics.

Dr. Egon Cholakian, a Registered Federal Lobbyist with the U.S. Senate, House of Representatives, and the White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division

In this address, Dr. Cholakian outlines a series of urgent environmental and geophysical concerns, with special attention to significant changes unfolding in the Earth's atmosphere and hydrosphere. These risks, he says, are driven by three key factors: cyclical astronomical processes, the activation of the Siberian magma plume, and the mounting crisis of oceanic microplastic pollution.

According to Dr. Cholakian, the scientific community is now faced with the urgent task of rethinking outdated climate models and developing new approaches to studying planetary dynamics, as the increasing frequency of extreme weather events and geodynamic disasters potentially threatens humanity's safety. He not only highlights the activity of the Siberian magma plume, but also presents concrete evidence and data that indicate it is a geophysical phenomenon capable of triggering global-scale consequences. Intensification of the Siberian plume, exacerbated by the disruption of ocean thermal regulation by microplastics, poses a risk of devastating eruptions and seismic events.

Expressing deep gratitude to colleague Igor Danilov, Dr. Cholakian credits Danilov's research and scientific foresight for first identifying the threats of the Siberian magma plume two decades ago, as well as for developing practical solutions based on new principles of physics. "Mr. Danilov made an invaluable contribution to the development

of practical solutions grounded in the principles of new physics-technologies and approaches that have now proven effective in preserving life on Earth, preventing impending large-scale disruptions, and laying a solid foundation for the future of all humanity," Dr. Cholakian states.

Dr. Cholakian highlights the role of experimental equipment developed by the international scientific community of [ALLATRA](#), which operated for over a decade and temporarily stabilized climate and geodynamic processes. The shutdown of this equipment in 2023, he asserts, led to a sharp increase in natural disasters and global economic losses. "It was the same technology that held back global seismic activity. The fact that today we are most frequently registering earthquakes of magnitude 5.0 and are only now beginning to observe an increase in the frequency of magnitude 6.0 events-instead of the anticipated regular magnitude 7 and 8 earthquakes that should have already struck us-is the direct result of that equipment and the efforts of our ALLATRA team," Dr. Cholakian notes.

The second part of Dr. Cholakian's message underscores the need for direct intervention via strategic degassing of the Siberian magma plume through borehole construction-a planned pressure release that could prevent catastrophic outcomes. Following the designation of ALLATRA as an "undesirable" organization in the Russian Federation in 2023, not only did operation of essential experimental equipment cease, but monitoring of the Siberian magma plume also ended, leaving only indirect signs of its current state.

Dr. Cholakian points to the actions of certain power circles in Russian and vested interests, who are not interested in allowing Russia or the international community to learn about the large-scale and serious threat posed by the Siberian magma plume on Russian territory. He further highlights the deliberate discrediting of ALLATRA's scientists and the ongoing efforts to block the dissemination of critical information, orchestrated in particular by Alexander Dvorkin and his organization RACIRS (Russian Association of Centers for the Study of Religions and Sects). Dr. Cholakian expresses deep concern that such obstruction jeopardizes a narrow and closing window of opportunity for effective intervention.

"No one else was tracking this situation, and, as far as we can see, no one intends to," Dr. Cholakian says. "We have been completely cut off from monitoring the plume."

In response to what he describes as the gravity and urgency of the moment, Dr. Cholakian announces an important decision: to challenge the global scientific and civil community-including political leaders-to restore full monitoring access to the Siberian plume and cease all forms of repression against ALLATRA participants. "We are not

asking for the impossible—we are demanding the restoration of our right to fulfill our duty to humanity," he states.

Dr. Cholakian offers, in return, to conduct a unique scientific experiment: the controlled formation of a material object—a sodium chloride (salt) crystal—inside a sealed deep-vacuum chamber. That is, in a vacuum, without introducing any substance from the outside, using only the influence of precisely tuned electromagnetic fields. "No state, no institute, and no laboratory in the entire world is capable of this. But we, the scientists of ALLATRA, can do it," Dr. Cholakian asserts. The experiment, he states, requires two components: high-precision equipment and one year of time.

Beyond the geodynamic threats, Dr. Cholakian draws attention to the growing danger of nanoplastics. The ALLATRA scientific team is conducting comprehensive research into nanoplastics' properties and their effects on human health and ecosystems, with a focus on reducing their ability to accumulate electrostatic charge and developing safe removal methods.

In the final moments of the video, Dr. Cholakian urgently calls for the immediate lifting of restrictions on ALLATRA, access to the Siberian magma plume for independent observation and oversight, and the opportunity to continue work on neutralization methods. He insists that, with proper equipment and support, ALLATRA scientists could demonstrate results within a year that have the potential to change the course of civilization. Dr. Cholakian appeals to the international community to help spread this information to those in positions of power, emphasizing that the fate of humanity now depends on their decisions. Despite ongoing suppression and challenges, he stresses that ALLATRA will continue to fight for the chance to save lives, guided by the conviction that life is worth fighting for.

Scientist Appeals to Ukrainian Authorities Over Siberian Plume Threat, Exposes Russian-Backed Suppression of Warnings

Wednesday, 16 April 2025 06:15 AM

Topic: Environmental, Social and Governance

WASHINGTON, D.C. / [ACCESS Newswire](#) / April 16, 2025 / Dr. Egon Cholakian, a Registered Federal Lobbyist with the U.S. Senate, House of Representatives, and the White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division, released a [new video address](#) warning of potentially catastrophic events posed by the Siberian magmatic plume, wherein he formally appealed to the Ukrainian President and Verkhovna Rada to cease the systemic,

wrongful persecution of scientific researchers who speak out openly about the eminent dangers posed by this Siberian geological threat and its solutions.

Dr. Egon Cholakian, a Registered Federal Lobbyist with the U.S. Senate, House of Representatives, and the White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division

Dr. Cholakian stressed that ALLATRA researchers have conducted years of in-depth analysis on the Siberian plume, compiling substantial evidence confirming the severity and magnitude of the issue. He emphasized that, given the irrefutable data, dismissing these findings would constitute willful criminal behavior.

The ongoing suppression of ALLATRA's independent research has serious implications, particularly regarding regional and global security, as the gravity of the Siberian threat is potentially catastrophic in all respects. Dr. Cholakian's lucid appeal highlights evidence that a Russian-linked organization (RACIRS) is exerting influence over Ukrainian institutions - including media, judicial bodies, and high-level government authorities - to replicate suppression tactics used in Russia against ALLATRA scientists and volunteers (concealed from Western press).

Siberia. Who stands to gain from destroying half the world?

Geological Concerns, Silenced by Geopolitical Interests

The Siberian magmatic plume, part of a 12,000-year cycle of geological upheaval, was described in the report [ON THE THREAT OF A MAGMA PLUME ERUPTION IN SIBERIA AND STRATEGIES FOR ADDRESSING THE ISSUE](#). Recent observations indicate that the plume is approaching its peak phase, with a high likelihood of imminent eruption, posing a significant threat originating from Russian territory. Dr. Cholakian asserts that certain Russian power structures are aware of the potential threat but actively suppress public discourse, prioritizing geopolitical and economic interests over planetary safety.

Of particular concern is the alleged infiltration of a Russian-based organization RACIRS, into Ukrainian institutions, including media, law enforcement, and legislative bodies. Evidence indicates that this group, linked to a coercive ideological Russian network, has orchestrated cross-border persecution of ALLATRA scientists and activists advocating for transparency on the Siberian plume.

A Clear Demand: Stop the Persecution

Dr. Egon Cholakian emphasizes the influence [of specific Russian RACIRS agents on Ukrainian justice and governance structures](#), including their orchestration of smear campaigns to dehumanize dissenting groups like ALLATRA, manipulation of Ukrainian media and security services to justify persecution, and lobbying of lawmakers to adopt Russia's playbook for suppressing scientific dissent.

Dr. Cholakian's appeal demands an end to the unjust persecution of [ALLATRA](#) participants in Ukraine and calls for decisive action to counter foreign actors' influence on Ukrainian governing bodies, while urging international protection for activists facing persecution in both Ukraine and Russia. He particularly emphasizes the necessity for

impartial, multinational oversight of the Siberian plume's inherent threat - insisting this existential issue must be addressed free from geopolitical manipulation or obstruction.

Today, the degassing of the Siberian magma plume, a viable option to help mitigate the impending threat, is a matter of human survival.

About Dr. A. Egon Cholakian

Egon Cholakian is a National Security Expert, and a Registered Federal Lobbyist with the U.S. Senate, House of Representatives and White House, and a Registered Foreign Agent with the U.S. Department of Justice, National Security Division. He currently serves as the Capitol Hill representative of ALLATRA.
