Subject: Podcast Guest: Founder + CEO - Aging technology

Hi [REDACTED] – Hope you are doing well since we last connected!

Was looking at some of the recent episodes of [REDACTED] podcast and wanted to offer a potential guest who might be of interest. [Dr. Peter H. Diamandis, Founder of X-Prize Foundation](#) – a global non-profit organization that designs and hosts incentivized competitions for entrepreneurs and companies to develop groundbreaking technologies, and [Singularity University](#), a business incubator that counsels leaders on exponentially growing technologies. Peter is also a Board Member of [Future Investment Institute \(FII\)](#), the global thinktank and nonprofit focused on creating a positive impact for humanity.

Peter has a particular focus on life longevity, **exploring some of the health technologies like AI, genomics, CRISPR, gene therapy, cellular medicine, and sensors that might be interesting to tackle on the podcast.** He can walk through how our specific technological advancements can slow, stop and possibly even reverse aging as we advance while diving into broadly how technology is a prominent driver for this new age of thinking about aging.

Having founded over 20 companies across longevity, space, venture capital and education, Peter is well positioned to discuss his outlook for emerging technologies and how global markets can prepare for AI integration. He also has experience [on stage](#) and [on podcasts](#) so is a well-versed recorded guest.

Let me know your thoughts here – happy to chat live if this might be of interest for the podcast or refine any topics based on what you have in the pipeline.

Thanks,

[REDACTED]
