Subject: Latin America in the Global Economy / FII Global Future of Work Report

Hi [REDACTED],

Given recent data from the UN trade and development (UNCTAD) that [over 70% of economic growth in the next five years will come from the Global South](#), reaching out to connect you with an executive source from the [Future Investment Initiative \(FII\) Institute](#), which **has been closely following the opportunity for investment in targeted industries to support the labor markets in the global south.**

Know you focused on employment and labor trends, and wanted to offer a conversation with [Richard Attias, FII's Chairman](#) who can walk you through some of the key findings on the readiness of Latin American countries to adopt and leverage modern technologies and AI. Richard has deep experience working across geographies to bridge the gap between the global north and global south and would be a great source to speak to the progress and challenges that the geopolitical and economic divide create.

Specifically, he can touch on:

- Why Latin America today faces a dual challenge: productivity growth and employment growth, the two main drivers of economic growth.
- How the growth in digital adoption in the global south could translate into substantial productivity gains for the broader economy, specifically in MedTech, EdTech and AgriTech.
- Looking at Latin America as a case study for embracing digital transformation, with internet penetration increasing from 10 percent two decades ago to over 75 percent today, comparable to levels seen in China.
- A comparison of the insights on Latin America with insights on MENA from the previous edition shows that the two economies face similar challenges in terms of productivity, labor force, and automation adoption.

Would you be interested in connecting with Richard / FII? For further reference, these points and more are also addressed in FII's recent [Global Future of Work Report](#).

Looking forward to hearing from you.

Thanks,
