# The AI disinformation gap the Pentagon may be missing

"The Pentagon is building a better mousetrap while the mice are rewriting the blueprint for the house," argues this analyst.

The Pentagon is getting better at catching deepfakes. DARPA's Semantic Forensics program, the Defense Innovation Unit's prototype contract with Hive, and a growing stack of detection tools all point the same way. The Department of Defense has decided that the disinformation fight is a detection problem.

They are wrong — not about deepfakes being a threat, but about where the real threat lives.

The detection tools the DoD is funding were built for a world where adversaries generate fake images, fake video and fake audio and then try to pass it off as real. That world exists. But it is the easy version of the problem. The harder version, the one showing up in research but not in budgets, is upstream. Adversaries are poisoning the AI models that defense analysts, intelligence platforms, and policymakers rely on to sort real from fake in the first place.

It is unclear whether the DoD has already encountered this problem in its own systems. But civilian researchers have documented it repeatedly. The Atlantic Council's Digital Forensic Research Lab and the UK AI Security Institute have both published evidence of adversarial content embedded in the training data that feeds widely used AI models.

We have been tracking this from Israel since January, when Iran shut down its internet during domestic unrest. The shutdown was designed to silence protesters, but it also revealed how state-controlled information flows end up shaping what AI models learn about the region. Tehran has been running its own disinformation campaigns using AI-generated content for years. This is not speculation. It is documented.

But the problem goes well beyond Iran. US allies in the region have their own information controls. Israel restricts reporter access to Gaza and limits what journalists working inside the country can cover. Gulf states have tightly controlled reporting on Iranian missile strikes within their borders. Even the US government has pressed satellite imagery companies to limit what they publish, and several have complied. These restrictions shape what AI models learn about the region just as surely as Iranian censorship does.

The problem also includes US adversaries outside the Middle East.

In an Atlantic Council DFRLab audit of Common Crawl, the public web archive that feeds much of the world's AI training pipeline, researchers found content from the Pravda network, a pro-Kremlin operation that has flooded the internet with millions of pieces of propaganda, baked directly into training data. Material from Glassbridge, a Chinese-government-adjacent influence operation, and Russia's RT was in there too. Common Crawl did not respond to the findings. A major open-weights model reproduced this content nearly verbatim when prompted.

How fragile are these systems? An October study by Anthropic, the UK AI Security Institute, and the Alan Turing Institute found it takes as few as 250 malicious documents to compromise a large model. Once that content is baked into the weights, the only fix is a full retrain. Expensive. Impractical. Usually not done.

This is the gap. The Pentagon is building a better mousetrap while the mice are rewriting the blueprint for the house.

Detection tools flag synthetic media, meaning AI-generated images, video or audio, after it has been created. They do nothing about a model that has been quietly trained to favor certain narratives, minimize certain conflicts, or omit facts a state actor would rather the world forget. When a defense analyst asks an AI assistant to summarize South China Sea developments or analyze satellite imagery from the Middle East, the answer may already be shaped by an adversary's influence operation. No deepfake detector catches that.

So what does closing this gap look like?

**Data provenance standards for any AI model used in a defense or intelligence context:** If we cannot verify what a model was trained on, we should not trust its outputs where accuracy matters. The Pentagon's March announcement about exploring classified-data training is a step, but it only covers government-specific models. The broader ecosystem that defense analysts actually use remains unaddressed. Israel's AI infrastructure buildout, including joint projects with US defense firms, shows what a provenance-first approach could look like in practice.

**Red-teaming that goes beyond safety and bias checks:** Current exercises test whether models produce harmful content when prompted. They do not test whether models have already been influenced by adversarial training data. That needs to change.

**And most immediately, awareness:** Most defense professionals I speak with have no idea training data poisoning is even possible, let alone that it has already been documented. That knowledge gap is itself a vulnerability.

The disinformation fight is not just about what is fake. It is about what the machines we trust to tell the difference are quietly being taught to believe.

# The Myth of Israel's Isolation: The World's Moving Closer, Not Further Away

Israel Day parade - courtesy of Shutterstock

One of the most frequently repeated claims since October 7 has been that Israel is becoming increasingly isolated on the international stage. Headlines often focus on diplomatic disputes, hostile demonstrations, critical UN resolutions, and disagreements with some Western governments, creating the impression that Israel is steadily losing friends around the world.

Received by NSD/FARA Registration Unit 10/23/2026 12:07:07 PM

Received by NSD/FARA Registration Unit 10/23/2026 12:07:07 PM

Additional information is available at the Department of Justice, Washington, DC.

The reality, however, is considerably more complex.

While criticism of Israeli policies has undoubtedly intensified in some international forums, many governments have simultaneously chosen to deepen their practical relationships with Israel. Defence cooperation has expanded, trade agreements have grown, diplomatic ties have strengthened, and new strategic partnerships have emerged across Europe, Africa, Asia, Latin America and the Middle East. Far from being abandoned, Israel is increasingly viewed by many countries as an indispensable partner in areas ranging from defence and cybersecurity to agriculture, artificial intelligence, water technology and energy security.

The contrast between the political narrative and the diplomatic reality has rarely been more striking.

## Key Takeaways

- Claims that Israel is becoming internationally isolated overlook significant diplomatic developments occurring around the world.
- Several governments that adopted strongly anti-Israel positions have recently lost elections while others are falling behind in opinion polls.
- European countries continue expanding defense cooperation with Israel.
- The Abraham Accords countries continue strengthening relations despite the Gaza war.
- India, Nigeria and several African nations are deepening strategic cooperation with Israel.
- Latin America has witnessed important political shifts favourable to stronger ties with Israel.
- Increasingly, governments are separating disagreements over the Gaza conflict from long-term national interests.

## Politics Changes—National Interests Endure

Received by NSD/FARA Registration Unit 10/23/2026 12:07:07 PM

One of the biggest mistakes in analyzing international relations is assuming that today's political headlines represent permanent diplomatic realities.

Governments change. Elections alter foreign policy. Public opinion evolves.

In recent months, several governments that adopted some of the world's strongest anti-Israel positions have either lost power or suffered significant political setbacks. Slovenia, Colombia, Bolivia and Ecuador have all experienced electoral changes that weaken governments whose foreign policies were among the most hostile towards Israel.

Meanwhile, governments in Spain and Norway—two of Israel's sharpest European critics—are currently trailing in opinion polls.

These developments do not guarantee dramatic policy reversals.

They do illustrate that diplomatic trends are rarely static.

## Europe Is Buying Israeli Security

Perhaps the clearest evidence against the narrative of isolation lies in defense cooperation.

Countries do not entrust their national security to partners they consider internationally isolated.

Germany, Slovakia and Romania have all signed major defense agreements with Israel, reflecting growing confidence in Israeli military technology and operational expertise. Greece and Cyprus have continued strengthening their strategic defense partnership with Jerusalem, recognizing Israel as an increasingly important pillar of Eastern Mediterranean security.

These agreements involve more than commercial transactions.

They represent long-term strategic partnerships that often extend over decades and require extraordinary levels of political trust.

This material is distributed by Clock Tower X LLC on behalf of the State of Israel.
Additional information is available at the Department of Justice, Washington, DC.

Governments purchasing advanced defense systems are making decisions based upon national security rather than temporary political debates.

## The Abraham Accords Continue to Grow

One prediction made repeatedly after October 7 was that the Abraham Accords would collapse

The opposite has largely occurred.

The United Arab Emirates, Bahrain and Morocco have continued expanding economic, technological and security cooperation with Israel despite enormous regional pressure. Investment, tourism, business partnerships and strategic dialogue have continued because all parties recognize that the long-term benefits of cooperation outweigh short-term political tensions.

This represents an important transformation in Middle Eastern politics.

For decades, the Palestinian issue effectively determined Arab-Israeli relations.

Today, many regional governments increasingly pursue foreign policies based upon their own national interests rather than ideological expectations.

That shift appears increasingly durable.

## New Partnerships Across the Global South

Israel's expanding diplomatic footprint is not limited to Europe or the Middle East.

Across Africa and the developing world, numerous countries continue strengthening bilateral relations. Estonia, Fiji, Guatemala, Uganda and El Salvador have all upgraded various aspects of their relationships with Israel, recognizing the country's expertise in agriculture, healthcare cybersecurity, water management and technological innovation.

At the same time, India and Nigeria have implemented highly significant new cooperation agreements covering strategic sectors important to both countries' long-term development.

This material is distributed by Clock Tower X LLC on behalf of the State of Israel.
Additional information is available at the Department of Justice, Washington, DC.

These partnerships reflect a broader trend.

Many governments increasingly evaluate Israel through the practical lens of technology, innovation and economic cooperation rather than exclusively through the Israeli-Palestinian conflict.

## Latin America Is Changing

Political developments across Latin America also challenge the narrative of growing isolation.

Argentina has emerged as one of Israel's closest partners in the region, with President Javier Milei continuing to deepen bilateral relations and promoting what has become known as the "Isaac Accords" as a framework for expanded cooperation.

At the same time, electoral changes elsewhere in the region have weakened several governments that previously positioned themselves among Israel's harshest critics.

Foreign policy throughout Latin America remains dynamic.

What appears today as diplomatic confrontation can rapidly evolve following democratic elections.

## Recognition Through Partnership

Perhaps the most important development is qualitative rather than quantitative.

Countries are increasingly choosing to deepen relationships with Israel not despite its challenges but because of its capabilities.

Whether the issue is missile defense, cyber resilience, artificial intelligence, water scarcity, precision agriculture, emergency medicine or intelligence cooperation, Israel has become an increasingly valuable strategic partner for governments confronting complex twenty-first century security challenges.

Received by NSD/FARA Registration Unit 10/23/2026 12:07:07 PM

This material is distributed by Clock Tower X LLC on behalf of the State of Israel.
Additional information is available at the Department of Justice, Washington, DC.

Even Somaliland's celebration of closer ties and recognition by Israel illustrates a broader point.

Many emerging governments increasingly view relations with Israel as an asset rather than a liability.

## The Difference Between Headlines and Reality

None of this means Israel faces no diplomatic challenges.

It plainly does.

International criticism remains intense. Several governments continue adopting highly critica positions. United Nations forums remain deeply contentious, and public opinion in parts of Europe and North America has shifted significantly.

These realities should not be ignored.

Neither should the equally important reality that beneath the headlines, governments continue signing defense agreements, expanding trade, investing in technology partnerships and strengthening diplomatic ties with Israel.

International relations are ultimately driven less by slogans than by national interests.

On that measure, Israel's position remains remarkably strong.

## Conclusion

Predictions of Israel's growing international isolation have become a recurring feature of commentary throughout the Gaza war.

The evidence suggests a far more nuanced picture.

While political criticism has undoubtedly intensified in some quarters, many governments have simultaneously chosen to strengthen practical cooperation with Israel across defense,

technology, intelligence, trade, agriculture and regional security. Electoral changes in several countries, expanding strategic partnerships in Europe and the Middle East, deepening ties across Africa and Asia, and the continued growth of the Abraham Accords all point toward a more complicated diplomatic reality than the narrative of isolation suggests.

Israel is not universally embraced. No country is. But neither is it isolated.

Increasingly, governments around the world appear to be distinguishing between political disagreements over specific policies and their long-term national interests. In doing so, many have concluded that Israel remains one of the world's most valuable strategic, technological and security partners.

Diplomatic headlines may suggest isolation.

Diplomatic actions increasingly tell a different story.

Not long before Israel's election, an account on X/Twitter posted an image of the prime minister and his wife hemmed in by menacing soldiers, with a caption wishing them the fate of the Ceausescus. The account carried an Israeli name and was written in native-sounding Hebrew.

FakeReporter, the Israeli watchdog that tracks fictitious accounts, linked it to an Iranian influence operation. That single post captures the problem that David Siman-Tov's analysis, "The war of trust," which appeared in the August 31 edition of *The Jerusalem Report* , left hanging. Attacks now arrive in fluent Hebrew at almost no cost, and the machinery meant to answer them is scattered across agencies that do not work as one.

# The Myth of Israel's Isolation is a Great Strategic Liability

Israeli military technology (courtesy of Shutterstock)

Ever since October 7, one narrative has become almost conventional wisdom: Israel is increasingly isolated from the rest of the world. It is repeated by international commentators, amplified on social media, cited by critics of Israel and, perhaps most surprisingly, echoed by many of Israel's own supporters.

Received by NSD/FARA Registration Unit 10/23/2026 12:07:11 PM

Received by NSD/FARA Registration Unit 10/23/2026 12:07:11 PM

This material is distributed by Clock Tower X LLC on behalf of the State of Israel.
Additional information is available at the Department of Justice, Washington, DC.

It was made most recently by potential US presidential candidate Rahm Emanuel.

The daily news cycle, dominated by hostile demonstrations, condemnatory UN resolutions and public disagreements with some Western governments, reinforces the impression that Israel is rapidly becoming a diplomatic pariah.

It is an understandable conclusion; it is also an incomplete one.

The danger is not merely that this narrative is inaccurate. It is that it has become so widely accepted that it is beginning to shape perceptions of reality. Those perceptions matter. They affect deterrence, embolden Israel's enemies, influence investors, discourage potential partners and undermine the confidence of Israelis themselves. When even well-meaning friends repeat that Israel stands alone, they unintentionally strengthen one of the central messages promoted by Hamas, Iran and their allies.

The reality is considerably more nuanced.

Behind the headlines, governments across the world are quietly moving closer to Israel, not further away. While criticism over the war in Gaza has undoubtedly intensified in many diplomatic forums, an entirely different story is unfolding in cabinet rooms, defense ministries and boardrooms.

Countries continue to buy Israeli defense systems. Intelligence cooperation is expanding. Trade is growing. New technological partnerships are being signed. Governments are increasingly separating disagreements over the Gaza conflict from their own long-term national interests.

International politics has always been driven less by rhetoric than by interests.

One of the greatest mistakes in analysing foreign policy is assuming that today's headlines represent permanent diplomatic realities. Governments change. Elections alter priorities. Public opinion shifts. Strategic interests endure.

Received by NSD/FARA Registration Unit 10/23/2026 12:07:11 PM

Recent political developments illustrate precisely this point. Several governments that adopted some of the world's strongest anti-Israel positions have either lost power or suffered significant electoral setbacks. Slovenia, Colombia, Bolivia and Ecuador have all experienced political changes that weakened governments whose foreign policies had become among the most hostile towards Israel. Meanwhile, governments in Spain and Norway, two of Israel's sharpest European critics, now trail in opinion polls.

Perhaps the clearest contradiction to the narrative of isolation can be found in defense cooperation.

Countries do not entrust their national security to partners they believe are isolated or strategically irrelevant. Across Europe, governments continue investing heavily in Israeli defense technology because they view it as among the most advanced in the world.

Germany, Romania and Slovakia have all expanded major defense cooperation with Israel. Greece and Cyprus continue strengthening strategic partnerships that have become central pillars of Eastern Mediterranean security. These are not symbolic gestures designed for favourable headlines. They are long-term commitments involving billions of dollars, decades of cooperation and extraordinary levels of political trust.

Governments may criticise Israeli policies while simultaneously deciding that Israel is indispensable to their own national security. Those positions are not contradictory. They reflect how states actually make decisions.

The same distinction has become increasingly evident in the Middle East.

Following October 7, many predicted the Abraham Accords would collapse under the pressure of public opinion. Instead, the opposite has largely occurred. The United Arab Emirates, Bahrain and Morocco have continued expanding economic, technological and security cooperation with Israel despite enormous regional pressure.

Business delegations continue travelling. Investment continues flowing. Security dialogue continues expanding. Tourism has resumed. While official rhetoric has sometimes become

Additional information is available at the Department of Justice, Washington, DC.

more cautious, the underlying strategic logic has remained intact.

This represents one of the most significant transformations in modern Middle Eastern politics For decades, Arab-Israeli relations were largely held hostage to the Palestinian issue. Increasingly, regional governments are pursuing foreign policies based upon their own national interests, economic development and security concerns. That shift appears far more durable than many observers appreciate.

The story extends well beyond Europe and the Middle East.

India continues deepening strategic cooperation with Israel across defense, technology and innovation. Nigeria has expanded important areas of collaboration. Across Africa, countries increasingly view Israeli expertise in agriculture, water management, healthcare and cybersecurity as essential tools for their own development. Meanwhile, Latin America is experiencing its own political evolution. Argentina has become one of Israel's closest international partners, while electoral changes elsewhere have weakened several governments that built much of their foreign policy around hostility towards Israel.

Increasingly, governments are evaluating Israel not solely through the prism of the Israeli-Palestinian conflict but through the practical lens of what Israel contributes to solving 21st-century challenges.

Artificial intelligence. Cybersecurity. Missile defense. Emergency medicine. Precision agriculture. Water scarcity. Intelligence cooperation. Energy resilience.

These are areas where Israel is not simply competitive. In many cases, it is a global leader.

None of this should minimise Israel's genuine diplomatic challenges. International criticism remains intense. Public opinion has shifted in parts of Europe and North America. Israel continues to face hostile majorities in many United Nations bodies, and some bilateral relationships have become more strained.

Ignoring those realities would be just as misleading as ignoring Israel's growing partnerships.

Received by NSD/FARA Registration Unit 10/23/2026 12:07:11 PM

Received by NSD/FARA Registration Unit 10/23/2026 12:07:11 PM
10/22/26, 9:11 PM This material is distributed by Clock Tower X LLC on behalf of the State of Israel. Additional information is available at the Department of Justice, Washington, DC. The Blogs - The Myth of Israel's Isolation Is a Great Strategic Liability | Mitch Ginsberg | The Times of Israel

But neither should we ignore what governments are actually doing. The distinction between public rhetoric and private policy has rarely been greater.

Diplomatic actions often reveal priorities far more accurately than diplomatic statements.

This is why the myth of Israel's isolation deserves to be challenged. Not because everything is going well, but because a distorted picture carries real strategic consequences.

Israel's enemies seek to portray it as abandoned because isolation weakens deterrence and encourages further aggression. If they can convince Israelis that they are alone, and persuade the wider world that partnership with Israel carries unacceptable costs, they achieve an important psychological victory regardless of events on the battlefield.

Israel's friends should be careful not to reinforce that narrative unintentionally.

The truth is more encouraging, and more useful. Israel is neither universally embraced nor universally condemned. Like every country confronting a major conflict, it faces criticism alongside cooperation. Yet beneath the daily headlines, governments across Europe, the Middle East, Africa, Asia and Latin America continue making decisions based on enduring national interests rather than passing political controversies.

Those decisions increasingly point in one direction.

Despite the noise, Israel remains one of the world's most valuable strategic, technological and security partners. The headlines often suggest isolation. The diplomacy tells a very different story.

Opposition to Israel is largely opposition to Netanyahu and his Smotrich and Ben Gvir controlled coalition. The US has a similar reputational problem with Trump. Both carry enormous strategic risk as evidenced by the debacle with Iran.

The old adage “a lie can travel halfway around the world before the truth puts on its shoes” was coniured in a time before social media. Today, the lie can travel multiple times around the

place Jewish communities and the State of Israel under sustained pressure.

At the same time, a parallel struggle is unfolding: a battle for public opinion in the United States, where support for Israel, once a bipartisan cornerstone, is eroding at an unprecedented pace.

The numbers are stark. A recent Pew Research Center survey found that 60% of Americans now hold an unfavorable view of Israel, compared to just 37% with a favorable view, a dramatic reversal from just a few years ago. Even more telling is where this shift is happening, with majorities of Americans under 50, across both political parties, now viewing Israel negatively.

This is not a marginal fluctuation. It is a generational realignment, and it is not occurring in a vacuum.

On the far-Right, antisemitism remains rooted in traditional tropes, like conspiracy theories about Jewish control, financial manipulation, and dual loyalty. These narratives, once largely confined to extremist circles, have found renewed life online. They're amplified by algorithm-driven ecosystems that reward outrage and radicalization.

On the far-Left, the language is different, but the effect can be similar. There, antisemitism, often reframed as anti-Zionism, casts Israel not merely as a criticizable state, but as a uniquely illegitimate and evil one.

In this worldview, the Jewish right to self-determination is singled out for rejection, and complex geopolitical realities are reduced to simplistic binaries of oppressor and oppressed. The line between criticism of Israeli policy and the delegitimization of Jewish identity is frequently blurred.

The convergence of these forces, old hatred on the Right, new ideological hostility on the Left, creates a potent and dangerous environment. It is one in which misinformation spreads

In today's online landscape, perception is often shaped less by verified information than by repetition, virality, and emotional resonance.

Social media platforms, while democratizing access to information, have also enabled the rapi spread of distortion. Images stripped of context, misleading statistics, and outright falsehoods can travel faster and further than carefully sourced reporting.

The consequences are tangible. Polling trends suggest that younger Americans are not only more critical of Israel, but also more susceptible to narratives that frame the conflict in absolutist terms.

As one analysis noted, Israel is "losing America's youth," reflecting a deeper shift in how the next generation interprets the Middle East and the role of the US within it .

If public opinion continues to move in this direction, the implications will extend beyond discourse. They will shape policy, influence elections, and redefine alliances.

Recognizing this challenge, new initiatives have emerged to rebalance the information environment. Platforms such as Jewish Onliner, Allyvia, and Paxpoint represent a strategic response to the digital battlefield.

Their premise is straightforward but essential. Misinformation must be countered not only with rebuttals, but with accessible, credible, and timely facts.

These initiatives reflect an understanding that the fight against antisemitism today is inseparable from the fight for informational integrity. It is not enough to condemn hatred; it must also be confronted at its source, where it is produced, amplified, and consumed.

Yet these efforts, while vital, cannot operate in isolation. They require broader engagement,

This is particularly urgent in the American context. The US has long been Israel's most important ally, not only strategically but culturally and politically. That relationship has been underpinned by shared values and a broad base of public support.

As that base fractures, the alliance itself becomes more vulnerable to political shifts and ideological swings.

The stakes, therefore, are high.

What is at issue is not merely Israel's image, but the resilience of democratic discourse in the face of polarization and disinformation. Antisemitism, in its modern forms, often serves as a warning signal, an early indicator of deeper societal fractures. Addressing it requires more than reactive measures. It demands a **proactive commitment to truth, to complexity, and to the difficult work of engaging across divides**.

The battle for public opinion is already underway. The question is whether those committed to facts, nuance, and fairness are prepared to fight it with the same intensity as those who seek to distort them.

**ABOUT THE AUTHOR**

Mark Ginsberg is an Israel-based digital marketer and commentator on technology and artificial intelligence, with over two decades of firsthand perspective on the country's innovation economy. Originally from South Florida and now based in Efrat, he analyzes the growth of Israel's tech ecosystem and the broader implications of AI on business, policy, and society.
