Industry Spotlight: Two Innovation Hubs, Growing Opportunities for Singapore and Massachusetts

The opening of Enterprise Singapore's Boston Overseas Centre is a pivotal milestone that connects two global innovation ecosystems and strengthens pathways for investment and partnership. Backed by $2.75 billion in bilateral goods trade, the new center links Massachusetts' research capabilities in life sciences, robotics, and AI with Singapore's strengths as a testbed for piloting, commercialization and launching into Asia. Demonstrated by mutual cross-border investments - from Singapore-based innovators like Cirrus Therapeutics expanding in Massachusetts to U.S.-based companies like Thermo Fisher Scientific scaling medtech research across Asia via Singapore - the Boston hub provides on-the-ground support to help enterprises on both sides connect with investors, collaborate with Massachusetts research institutions and navigate new market opportunities.

Innovation in Action: Green Li-ion Powers U.S. Battery Supply Chain Resilience

Electric vehicles and large-scale energy storage are driving urgent demand for U.S. manufacturers to build a resilient, domestic battery recycling supply chain and Singapore companies can provide ready-to-implement solutions. Singapore-headquartered Green Li-ion invested in and opened its first commercial-scale U.S. plant in Atoka, Oklahoma, to process battery scrap into cathode-grade materials directly on American soil. Supported by Enterprise Singapore throughout its U.S. market entry and scaling phases, Green Li-ion addresses crucial energy security bottlenecks in the U.S. through easily scalable technology to localize battery supply chains.

Climate Action: Singapore-Based ARC Coalition Unifies Corporate Standards for Carbon Credits

The Singapore-based Action for a Resilient Climate Coalition (ARC Coalition) seeks to advance corporate climate action globally by investing in common, high-integrity carbon credit criteria grounded in leading international benchmarks. Supported by Enterprise Singapore, the initiative collaborates directly with buyers, project developers, and technical experts to strengthen voluntary carbon markets in line with the Paris Climate Agreement and empower corporations working to offset hard-to-abate emissions. Enterprise Singapore invites leaders and institutional buyers to connect with our team and join the coalition.

On Our Radar: Activate Goes Global

Over the past decade, Activate has helped scientists in the U.S. transform groundbreaking research into more than 275 companies that have raised $5.5 billion of venture investment. Now, it is bringing its pioneering venture-building model to Singapore — its first international expansion — with the launch of the Activate Global Fellows program, created in partnership with Nanyang Technological University, funded by the National Research Foundation, and supported by Enterprise Singapore. Its five inaugural Fellows are Singapore-based founders of early-stage deep-tech start-ups spanning manufacturing (LAPIS), life sciences (Healbac), and climate tech (LoopForBio, AeroFlux and CRecTech). Businesses and investors seeking to understand more about the five startups can reach out to Activate.

Deals & Developments: SG Semiconductor - A Trusted Hub for US Innovation

Singapore launched SG Semiconductor, a national brand initiative led by A*STAR and Economic Development Board to establish Singapore as a neutral, trusted Asia-Pacific hub, where global semiconductor companies can co-innovate and scale in Asia. Leading U.S. semiconductor companies have announced major initiatives to deepen their presence in Singapore. With A*STAR, Applied Materials broadened its long-standing joint packaging collaboration, GlobalFoundries deepened its silicon photonics partnership, Lam Research is adding 200 local technical positions in Singapore, and Broadcom established a joint venture (Advanced Substrate Technologies) with Japan's Toppan for Singapore's first high-end FC-BGA substrate plant, adding critical capacity to address growing demand from AI and networking applications. By pairing Singapore's R&D infrastructure with leading semiconductor multinationals, Singapore helps American companies build resilient supply chains and accelerate time-to-market across the Asia Pacific region.
